## New ITFAS-Level-1 Test Answers - ITFAS-Level-1 Latest Test Cram

This practice exam software includes all ITFAS-Level-1 exam questions that have a high chance of appearing in the Inspection and Testing of Fire Alarm Systems Level I Exam exam. The ITFAS-Level-1 practice exam allows you to set the number of questions and time for each attempt and presents you with a self-assessment report showing your performance. You might not be able to get all-in-one practice material for the Inspection and Testing of Fire Alarm Systems Level I Exam ITFAS-Level-1 of such excellent quality anywhere else.

## NICET Inspection and Testing of Fire Alarm Systems Level I Exam Sample Questions (Q80-Q85):

### NEW QUESTION # 80

When testing a room temperature switch, below what temperature does the off-normal signal occur?

- A. 50 °F (10.0 °C)
- B. 45 °F (7.2 °C)
- C. 40 °F (4.4 °C)
- D. 32 °F (0.0 °C)

**Answer: C**

Explanation:

Room temperature switches are used to detect freezing conditions in environments such as sprinkler valve rooms. An off-normal (supervisory) condition is triggered if the temperature drops below 40 °F (4.4 °C).

NFPA 72 (2022), Section A.17.16.1.1:

"Low-temperature supervisory signals shall be initiated when the temperature falls below 40 °F (4.4 °C) unless otherwise specified."

This signal helps prevent system damage or failure due to freezing.

Correct answer: B. 40 °F (4.4 °C)

### NEW QUESTION # 81

Notification appliances in a fire alarm system produce a distinctive evacuation signal that does which of the following?

- A. Provides a 3-pulse temporal pattern
- B. Provides a 4-pulse temporal pattern
- C. Alternates on for 1 second, off for 1 second
- D. Alternates on for 1 second, off for 1.5 seconds

**Answer: A**

Explanation:

NFPA 72 mandates a standardized evacuation signal pattern to ensure building occupants can recognize and respond to an emergency.

NFPA 72 (2022), Section 18.4.2.1:

"Where audible appliances are used for evacuation or relocation, the alarm signal shall be the Temporal- Three Evacuation Signal pattern (three short audible signals followed by a pause)." This pattern is commonly known as the Temporal-3 or T-3 signal.

Correct answer: C. Provides a 3-pulse temporal pattern

### NEW QUESTION # 82

Which of the following situations is considered an impairment?

- A. Smoke detector within 4 feet of a return air opening
- B. Smoke detector within 4 feet of an air supply diffuser
- C. Intelligible audibility
- D. Closed sprinkler valve

**Answer: D**

Explanation:

An impairment occurs when part of the life safety system is disabled or rendered ineffective. A closed sprinkler valve directly disables part of the fire suppression system, which meets the definition of an impairment.

NFPA 72 (2022), Section 3.3.149 - Impairment:

"A condition where a fire protection or life safety system or portion thereof is out of service." Smoke detector placement issues may be a code violation but not a system impairment. Intelligible audibility is a positive attribute, not a problem.

Correct answer: A. Closed sprinkler valve

### NEW QUESTION # 83

Verification of a DACT's trouble signal to the fire alarm shall be received within a maximum of how many minutes when the primary telephone line is disconnected?

- A. 0
- **B. 1**
- C. 2
- D. 3

**Answer: B**

Explanation:

DACTs (Digital Alarm Communicator Transmitters) are required to supervise their telephone communication paths. If the primary line is disconnected, the system must detect and transmit a trouble signal quickly.

NFPA 72 (2022), Section 26.6.4.4.2.3:

"Loss of the primary means of transmission shall be annunciated at the protected premises within 4 minutes." This ensures prompt identification and correction of communication issues.

Correct answer: C. 4

#### **NEW QUESTION # 84**

When the main power is disconnected, how long should a power supply with emergency voice communication systems work in alarm mode?

- A. Minimum of 5 minutes
- **B. Minimum of 15 minutes**
- C. Maximum of 5 minutes
- D. Maximum of 15 minutes

**Answer: B**

Explanation:

Emergency voice/alarm communication systems must continue functioning after a loss of primary power for a minimum of 24 hours in standby, followed by 15 minutes of alarm operation.

NFPA 72 (2022), Section 10.6.7.2.1.1 (Exception):

"...followed by 15 minutes of alarm for emergency voice/alarm communication systems." This ensures that occupants can still hear evacuation messages even during a power outage.

Correct answer: D. Minimum of 15 minutes

#### **NEW QUESTION # 85**
