In today's technological world, more and more students are taking the Mist AI, Associate (JNCIA-MistAI) (JN0-253) exam online. While this can be a convenient way to take a Mist AI, Associate (JNCIA-MistAI) (JN0-253) exam dumps, it can also be stressful. Luckily, ValidVCE's best Juniper JN0-253 exam questions can help you prepare for your Juniper JN0-253 Certification Exam and reduce your stress. If you are preparing for the Mist AI, Associate (JNCIA-MistAI) (JN0-253) exam dumps our JN0-253 Questions help you to get high scores in your Mist AI, Associate (JNCIA-MistAI) (JN0-253) exam.

Our JN0-253 study materials include 3 versions and they are the PDF version, PC version, APP online version. You can understand each version's merits and using method in detail before you decide to buy our JN0-253 learning guide. And the content of the three different versions is the same, but the displays are totally different according to the study interest and hobbies. And it is quite enjoyable to learn with our JN0-253 Exam Questions.

Accurate JN0-253 Test - JN0-253 Test Papers

Our to-the-point and trustworthy Mist AI, Associate (JNCIA-MistAI) Exam Questions in three formats for the Juniper JN0-253 certification exam will surely assist you to qualify for Juniper JN0-253 Certification. Do not underestimate the value of our Juniper JN0-253 exam dumps because it is the make-or-break point of your career.

Juniper Mist AI, Associate (JNCIA-MistAI) Sample Questions (Q42-Q47):

NEW QUESTION # 42

An AP is connected to your wired network but is not claimed to your organization. Which type of AP would be a possible security threat in this scenario?

- A. spoofed AP
- B. rogue AP
- C. honeypot AP
- D. neighbor AP

Answer: B

Explanation:

Types of APs and Security Threats:

Understanding different types of access points and their potential security threats.

Access Point Types:

Neighbor AP: An access point that belongs to a neighboring network and is not necessarily a security threat.

Rogue AP: An unauthorized access point connected to the wired network, posing a significant security threat.

Spoofed AP: An access point that mimics a legitimate one, but typically does not involve being connected to the network.

Honeypot AP: An access point set up to lure attackers, not necessarily a threat unless used maliciously.

Identifying the Threat:

An AP connected to your wired network but not claimed to your organization is considered a rogue AP and poses a security threat.

NEW QUESTION # 43

Which two use cases are popular in location-based services (LBS) deployments? (Choose two.)

- A. asset tracking
- B. SSID scheduling
- C. micro segmentation
- D. way finding

Answer: A,D

Explanation:

Asset Tracking: Asset tracking is a common use case in LBS deployments, enabling organizations to locate and manage assets in real-time. This is particularly useful in environments like hospitals, warehouses, and large corporate campuses where knowing the precise location of equipment can save time and improve efficiency.

Wayfinding: Wayfinding helps users navigate through complex environments, such as large buildings, airports, and shopping malls. By providing real-time navigation assistance, LBS enhances the user experience and improves accessibility within these spaces.

NEW QUESTION # 44

What is the purpose of Audit Logs in Juniper Mist?

- A. to record SLE violations
- B. to record administrative activities
- C. to record security alerts
- D. to record key performance events

Answer: B

Explanation:

The purpose of Audit Logs in Juniper Mist is to record administrative activities within the Mist dashboard.

According to the official Juniper Mist documentation: "Audit Logs provide a detailed chronological record of each configuration change, administrative action, and user activity within the Mist Cloud portal. These logs include information such as the action performed (e.g., adding or removing sites, devices, or users), the timestamp, and the user who performed the action. Audit Logs are critical for accountability, compliance, and troubleshooting, enabling administrators to trace changes and ensure that only authorized users are making modifications to their network settings. Mist stores audit log records securely and makes them accessible for review by organization administrators from the dashboard's Organization > Audit Logs section." This directly aligns with option C, as the logs primarily track configuration changes and administrative actions-not performance events, security alerts, or SLE violations. Such activities include site creation, modification, device assignment, role changes, and other user or configuration updates.

NEW QUESTION # 45

Where does Mist use AI reinforcement learning?

- A. Mist uses reinforcement learning to troubleshoot voice call quality issues.
- B. Mist uses reinforcement learning in its Radio Resource Management (RRM) service.
- C. Mist uses reinforcement learning in its dynamic packet capture service.
- D. Mist uses reinforcement learning to troubleshoot video call connection issue.

Answer: B

Explanation:

Mist AI uses reinforcement learning in its Radio Resource Management (RRM) service. This approach allows the system to dynamically optimize the performance of the wireless network by adjusting various radio parameters. The RRM service continuously learns and adapts based on network conditions, user behavior, and environmental factors to ensure optimal performance and reliability.

NEW QUESTION # 46

What is required for Marvis Minis to operate?

- A. Premium Analytics subscription
- B. WLAN template
- C. Minimum AP firmware
- D. WAN Assurance subscription

Answer: C

Explanation:

Marvis Minis is an advanced feature within the Juniper Mist AI ecosystem designed to perform autonomous, synthetic network testing. It uses Mist Access Points (APs) to simulate client behavior—such as association, authentication, DHCP, DNS, and application reachability—to proactively detect service issues before real users are affected.

According to the Juniper Mist Marvis Minis Deployment Guide and Marvis AI documentation, the key requirement for enabling Marvis Minis is that all participating access points must be running a minimum supported firmware version that includes the Minis agent functionality.

The documentation specifies:

"Marvis Minis requires APs running the minimum firmware version that supports synthetic testing. APs on earlier versions will not be capable of running Minis tests or reporting results to the Mist Cloud." Additional subscriptions such as WAN Assurance, Premium Analytics, or WLAN templates are not prerequisites for operation. While Marvis licensing must be active, the feature itself relies primarily on compatible firmware within the Mist-managed APs.

Therefore, the correct answer is C. Minimum AP firmware—ensuring the APs are on a supported firmware release is essential for Marvis Minis functionality.
