P.S. Free & New JN0-363 dumps are available on Google Drive shared by PassCollection: [https://drive.google.com/open?id=1hivcrUsXnR7iEhD\\_-NakrNtb\\_Lj6FK0V](https://drive.google.com/open?id=1hivcrUsXnR7iEhD_-NakrNtb_Lj6FK0V)

People who appear in the test of the Service Provider Routing and Switching, Specialist (JNCIS-SP) (JN0-363) certification face the issue of not finding up-to-date and real exam questions. PassCollection is here to resolve all of your problems with its actual and latest Juniper JN0-363 Questions. You can successfully get prepared for the JN0-363 examination in a short time with the aid of these Service Provider Routing and Switching, Specialist (JNCIS-SP) (JN0-363) exam questions.

The JN0-363 Certification Exam covers topics such as routing, switching, and troubleshooting in a service provider environment. Candidates are expected to have a deep understanding of the OSI model, routing protocols, MPLS, and BGP. Additionally, candidates should be familiar with Juniper Networks products such as Junos software, Juniper Networks routers, and Juniper Networks switches.

The JN0-363 exam is an essential step for individuals who want to pursue a career in service provider networking. Service Provider Routing and Switching, Specialist (JNCIS-SP) certification is recognized globally and is highly valued by employers. The JNCIS-SP certification is a prerequisite for the Juniper Networks Certified Internet Professional (JNCIP-SP) and the Juniper Networks Certified Internet Expert (JNCIE-SP) certifications, which are considered advanced-level certifications in the service provider networking domain.

## Latest JN0-363 Exam Dumps | 100% Free High Hit-Rate Reliable Service Provider Routing and Switching, Specialist (JNCIS-SP) Test Tips

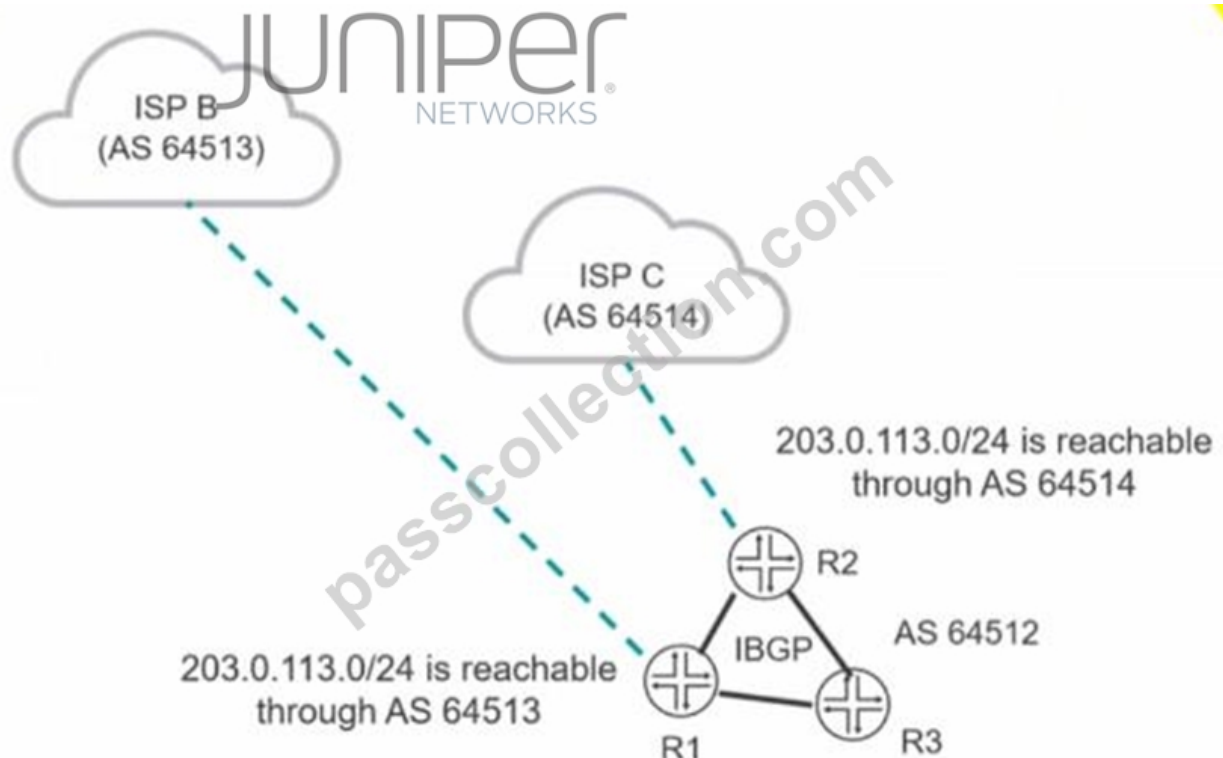

There are many users that are using Service Provider Routing and Switching, Specialist (JNCIS-SP) (JN0-363) exam questions and rated it as one of the best in the market. The customers are pleased with Service Provider Routing and Switching, Specialist (JNCIS-SP) (JN0-363) exam questions and all of them have passed the Service Provider Routing and Switching, Specialist (JNCIS-SP) (JN0-363) certification exam on the very first try.

Juniper JN0-363 certification exam is a specialist-level certification offered by Juniper Networks. Service Provider Routing and Switching, Specialist (JNCIS-SP) certification is designed for individuals who have a deep understanding of service provider routing and switching technologies. The JN0-363 Exam is an advanced-level certification that requires a thorough understanding of Juniper Networks technologies and products.

### Juniper Service Provider Routing and Switching, Specialist (JNCIS-SP) Sample Questions (Q62-Q67):

#### NEW QUESTION # 62

Exhibit

You want the R1 and R3 routers to forward traffic destined to the 203.0.113.0/24 network through R2. Which BGP attribute would you modify to satisfy this requirement?

- A. community
- B. local preference
- C. MED
- D. origin

**Answer: C**

Explanation:

To influence the path taken through an autonomous system, the Multi-Exit Discriminator (MED) attribute can be used. By setting a lower MED on R2 for routes advertised to R1 and R3, it will make the path through R2 to the 203.0.113.0/24 network more preferable.

### NEW QUESTION # 63

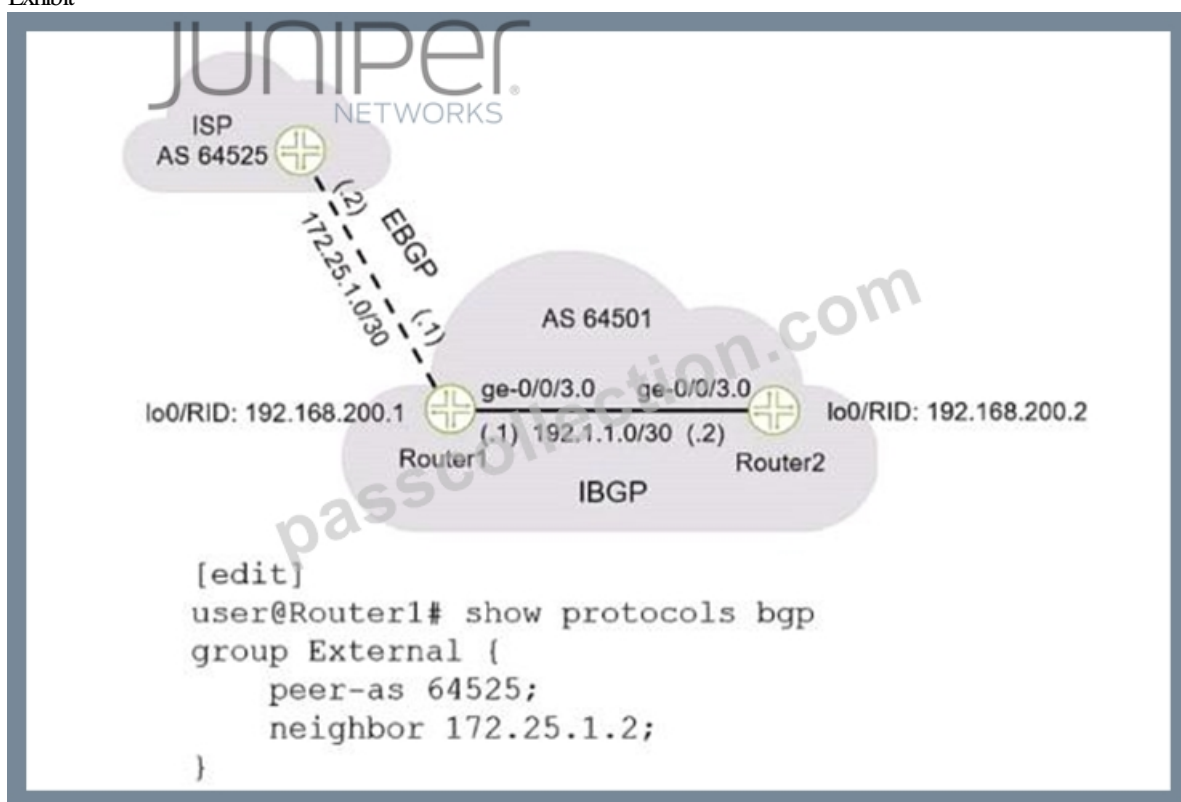

You have recently configured MSTP on two switches in your network to participate in the same MSTP region. You issue the `show spanning-tree mstp` configuration command on both switches and notice that the configuration digests do not match. What does this mismatch indicate?

- A. You should ensure that the bridge IDs and priority values are unique on both switches.
- **B. You should ensure that the MSTIs and their VLAN IDs are equal on both switches.**
- C. Everything is functioning as expected because the configuration digests should not match.
- D. You should ensure that the max-age and hello timers are equal on both switches.

**Answer: B**

### NEW QUESTION # 64

Exhibit

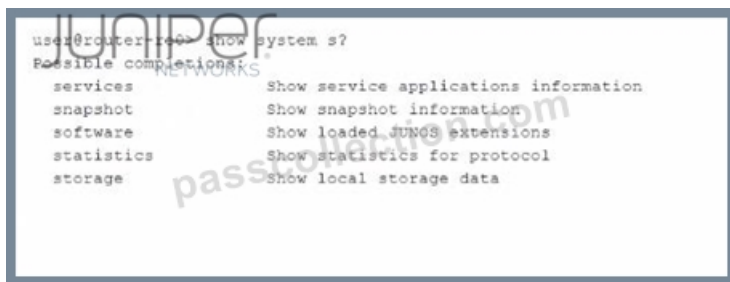

Referring to the exhibit, what must be included in the Router1 configuration when establishing an EBGP session with the ISP?

- **A. A local address must be specified.**
- B. The BGP session type external must be specified.
- C. A local AS must be specified.
- D. The BGP session type internal must be specified.

**Answer: A**

### NEW QUESTION # 65

Exhibit

You have configured graceful RE switchover (GRES), however you cannot complete the show system switchover command. Referring to the exhibit, what is the problem?

- A. The command is only available if non-stop routing is enabled.
- B. The command is only available if a backup router is configured.
- C. The command is only available on the backup Routing Engine.
- D. The command is only available if graceful restart is enabled.

**Answer: A**

Explanation:

The show system switchover command is used to display the status of the Graceful Routing Engine Switchover (GRES) feature. This command is available when nonstop routing (NSR) is enabled, which works in conjunction with GRES to maintain uninterrupted routing in case of a Routing Engine switchover.

#### NEW QUESTION # 66

Which two statements are correct about the BGP next-hop attribute value? (Choose two.)

- A. By default, the next-hop value is not changed across IBGP links.
- B. By default, the next-hop value is not changed across EBGP links.
- C. By default, the next-hop value is changed across IBGP links.
- D. By default, the next-hop value is changed across EBGP links.

**Answer: A,D**

Explanation:

By default, the router that originally sourced the route into BGP places its peer address into the attribute field.

The next-hop value is then typically changed when the route is transmitted across external eGP (EBGP) links.

Internal BGP (IBGP) peers do not alter the next-hop value between themselves.

B). By default, the next-hop value is changed when a route is passed from an EBGP peer to another EBGP peer. C. By default, the next-hop value is retained when a route is advertised across IBGP links. References:
