100% Pass Quiz 2025 Juniper JN0-363: Service Provider Routing and Switching, Specialist (JNCIS-SP) Accurate Latest Exam Pass4sure

If you want to make one thing perfect and professional, then the first step is that you have to find the people who are good at them. In this JN0-363 exam braindumps field, our experts are the core value and truly helpful with the greatest skills. So our JN0-363 practice materials are perfect paragon in this industry full of elucidating content for exam candidates of various degrees to use for reference. Just come to buy our JN0-363 study guide!

Juniper JN0-363 (Service Provider Routing and Switching, Specialist (JNCIS-SP)) Certification Exam is a professional-level certification exam for individuals who want to demonstrate their expertise in the field of service provider routing and switching. JN0-363 exam is designed to test the knowledge and skills required to configure and troubleshoot Juniper Networks routers and switches in a service provider environment. The JN0-363 Exam is a comprehensive test that covers a wide range of topics such as routing protocols, MPLS, VPNs, QoS, and security.

Juniper Service Provider Routing and Switching, Specialist (JNCIS-SP) Sample Questions (Q58-Q63):

NEW QUESTION # 58

Exhibit

```
root@R1> show configuration protocols isis
interface ge-0/0/0.0 {
}
interface ge-0/0/1.0 {
}
interface lo0.0;
level 1 disable;
level 2 wide-metrics-only;
reference-bandwidth 100g;
root@R1> show configuration interfaces ge-0/0/0
unit 0 {
  family inet {
    address 10.1.2.1/30;
  }
  family inet {
    address 10.1.2.1/30;
  }
  family inet6;
  family mpls;
}
root@R1> show isis adjacency
Interface      System      L State      Hold (secs) SNFA
ge-0/0/1.0     R6NETWORKS2 Up           19
```

You configured interface ge-0/0/0.0 to run IS-IS, but this interface does not appear in the output of the show isis adjacency command as shown in the exhibit.

What is the problem in this scenario?

- A. The family iso statement must be added to the logical interface.
- B. This is a Gigabit Ethernet interface, that is incompatible with the reference-bandwidth 100g statement.
- C. The router at the other end of the link is a Level 1 only router.
- D. The router at the other end of the link is not sending any IS-IS Hello messages.

Answer: A

Explanation:

For IS-IS to form adjacencies, the 'family iso' statement must be configured on the interface. This is required because IS-IS operates over the connectionless network service (CLNS) and not over IP. Without the 'family iso' configuration, IS-IS cannot form adjacencies over the interface.

NEW QUESTION # 59

You are bringing a new network online with three IS-IS routers using default Junos election priorities. The routers are configured as Level 2 only IS-IS routers. Which statement is true about the DIS election in this scenario?

- A. The router with the lowest numerical lo0 IP address will be elected as the DIS.
- B. The router with the highest MAC address will be elected as the DIS.
- C. The router with the highest numerical lo0 IP address will be elected as the DIS.

- D. The router with the lowest MAC address will be elected as the DIS.

Answer: B

Explanation:

A router's priority for becoming the designated router is indicated by an arbitrary number from 0 through 127, which you configure on the IS-IS interface. The router with the highest priority becomes the designated router for the area (Level 1, Level 2, or both), also configured on the IS-IS interface. If routers in the network have the same priority, then the router with the highest MAC address is elected as the designated router. By default, routers have a priority value of 64.

NEW QUESTION # 60

You are using RSVP to signal an MPLS LSP.

Which statement is true in this scenario?

- A. The traffic engineering database must be used for all LSPs.
- B. A primary path must be configured to establish an LSP.
- C. A secondary path must be configured to establish an LSP.
- D. LSPs can be configured without any traffic engineering constraints.

Answer: D

NEW QUESTION # 61

Click the Exhibit button. Based on the configuration shown in the exhibit, what will be the state of the IS-IS levels on interface ge-0/0/0.100?

```
protocols {
  isis {
    level 1 disable;
    interface ge-0/0/0.100 {
      level 2 disable;
    }
    interface all;
    interface fxp0.0 {
      disable;
    }
  }
}
```

JUNIPER
NETWORKS

- A. Level 1 is disabled and Level 2 is enabled.
- B. Level 1 is disabled and Level 2 is disabled.
- C. Level 1 is enabled and Level 2 is disabled.
- D. Level 1 is enabled and Level 2 is enabled.

Answer: B

NEW QUESTION # 62

You are bringing a new network online with three IS-IS routers using default Junos election priorities. The routers are configured as Level 2 only IS-IS routers. Which statement is true about the DIS election in this scenario?

- A. The router with the highest MAC address will be elected as the DIS.
- B. The router with the lowest numerical lo0 IP address will be elected as the DIS.
- C. The router with the highest numerical lo0 IP address will be elected as the DIS.
- D. The router with the lowest MAC address will be elected as the DIS.

Answer: C
