to the next problem, solves that and looks back to see if the previous one is still correct. Example: completing a Sudoku puzzle Divide and conquer -> Divides a problem into smaller sub-problems, solves them and combines the answers to solve the initial problem. Example: categorising data Dynamic programming -> Uses different approaches to solve a problem by remembering the past. Example: the shortest route to travel between two cities by road Greedy -> Finds the best possible choice at each stage. Example: giving change for a cash transaction using the highest-value coins and notes available Branch and bound -> Uses an optimisation process to test for the best possible outcome. Example: how often to place orders to ensure stock levels are maintained for the least cost. Brute force -> Tries many patterns until a solution is found. Example: software that guesses a security password

### QUESTION: 5

"Counterfeit computer hardware increases the risk and likelihood of a successful cyber-attack". Is this statement False?

#### Option A :

Yes, because not all counterfeit products such as hardware are accessible to hackers to implant malware upfront so the likelihood of a cyber-attack is the same as buying genuine

#### Option B :

No, because it is the sole responsibility of the Procurement department to ensure that hardware being bought is not counterfeit which eliminates any possibility of cyber-attacks

#### Option C :

No, because the quality of the counterfeit product may not be high and fake hardware could include malware which increases the likelihood of a successful cyber-attack

#### Option D :

Yes, because counterfeit products are generally still of a high quality and can have cyber-security measures and systems installed to reduce the risk of any future cyber-attacks

Correct Answer: C
