

Latest Microsoft SC-100 Exam Cram & SC-100 Exam Exercise

What's more, part of that DumpsTests SC-100 dumps now are free: <https://drive.google.com/open?id=1taZ4Z33nRYpliA2NB3mAnp1o6U1koQIW>

As the most important element that almost all the candidates will take into consider, the pass rate of our SC-100 exam questions is high as 98% to 100%, which is unique in the market and no one has made it. And also the exam passing guarantee that makes our SC-100 Study Guide superior in the market. As the best seller, our SC-100 learning braindumps are very popular among the candidates. Many of the loyal customers are introduced by their friends or classmates.

Microsoft SC-100 Exam is ideal for those who are looking to pursue a career in cybersecurity and want to validate their skills and knowledge with an industry-recognized certification. SC-100 exam is also suitable for professionals who are already working in cybersecurity and want to enhance their knowledge and skills in Microsoft security technologies and solutions. By passing the Microsoft SC-100 Exam, individuals can demonstrate their ability to design and implement secure solutions using Microsoft security technologies.

SC-100 Exam Exercise - Reliable SC-100 Test Testking

Our company employs experts in many fields to write SC-100 study guide, so you can rest assured of the quality of our learning materials. What's more, preparing for the exam under the guidance of our SC-100 exam questions, you will give you more opportunities to be promoted and raise your salary in the near future. So when you are ready to take the exam, you can rely on our SC-100 Learning Materials. If you want to be the next beneficiary, what are you waiting for? Come and buy our SC-100 learning materials.

How To Get Microsoft SC-100 Certification Exam

The Microsoft SC-100 certification exam is the first step in your path toward becoming a Cybersecurity Architect. It is an entry level exam that requires you to demonstrate a fundamental understanding of IT security principles and processes. The most important thing you can do before taking the exam is to be prepared for it. An identity privileged role hybrid tenant is a tenant who can use both their individual and organizational identities. This allows them to access the resources they need without having to reveal their full identity. Logging baselines should be set and maintained to mitigate the risk of regulatory compliance. This can be done through the use of specific logging requirements, predefined thresholds, and regular analysis and review of logs. There are various types of platforms but here at Microsoft **SC-100 dump** are the best way to pass and save your time and money.

If you are planning to get the Microsoft SC-100 Cybersecurity Architect (beta) certification in order to make a career in this field, you need to have proper training and experience. But if you do not have any idea about how to get the certification exam, then you are at the right place. Here you find every thing about how to get this exam and what is needed for it. The process of evolving mitigation selection eliminates the need for checking. By continuously refining the selection of mitigation measures, organizations can more easily adapt to changes in the environment and protect their assets more effectively.

Microsoft Cybersecurity Architect Sample Questions (Q29-Q34):

NEW QUESTION # 29

You use Azure Pipelines with Azure Repos to implement continuous integration and continuous deployment (CI/CO) workflows. You need to recommend best practices to secure the stages of the CI/CD workflows based on the Microsoft Cloud Adoption Framework for Azure.

What should you include in the recommendation for each stage? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

Answer:

Explanation:

NEW QUESTION # 30

Your company has an Azure subscription that has enhanced security enabled for Microsoft Defender for Cloud.

The company signs a contract with the United States government. You need to review the current subscription for NIST 800-53 compliance. What should you do first?

- A. From Defender for Cloud, review the secure score recommendations.
- B. From Defender for Cloud, enable Defender for Cloud plans.
- C. From Defender for Cloud, add a regulatory compliance standard.
- D. From Defender for Cloud, review the Azure security baseline for audit report.

Answer: A

NEW QUESTION # 31

Hotspot Question

You have an Azure subscription.

You need to use a federated model in Azure API Management to control access to your organization's APIs. The solution must meet the following requirements:

- Support the use of role-based access control (RBAC) to manage the APIs.

- Support the use of keys to control the consumption of the APIs.

To which scope should you associate each control method? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

Answer Area

RBAC roles:

	▼
Products	
Subscriptions	
Workspaces	

Keys:

	▼
Products	
Subscriptions	
Workspaces	

Answer:

Explanation:

Answer Area

RBAC roles:

▼

Products

Subscriptions

Workspaces

Keys:

▼

Products

Subscriptions

Workspaces

Explanation:

Box 1: Subscriptions

In Azure API Management, RBAC can be used to manage access to APIs within a federated model by assigning roles to users or groups at different scopes (e.g., subscription, resource group, or API Management instance). This allows for granular control over who can manage or access specific APIs, enabling decentralized API development teams to manage their APIs while a central team maintains the infrastructure.

Box 2: Products

In a federated model within Azure API Management, you can control API consumption using keys by leveraging products and subscriptions. This allows teams to manage their APIs independently while still benefiting from centralized governance. Each team can define their own products, which are collections of APIs, and then manage subscriptions to those products. Consumers use subscription keys to access the APIs within the subscribed products.

NEW QUESTION # 32

You have an Azure subscription that contains an Azure key vault named Vault1.

You plan to deploy multiple virtual machines that will host a custom app named App1. App1 will use secrets stored in Vault1. The virtual machines will be redeployed regularly based on the usage demands of App1.

You need to recommend a solution that will enable App1 to access the secrets stored in Vault1. The solution must meet the following requirements:

- * Minimize the number of security principals that can access Vault1.
- * Minimize the storage of sensitive data on the virtual machines.
- * Minimize administrative effort.

Which type of endpoint should App1 use to access the secrets, and which type of identity should App1 use?

To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

Answer Area

Endpoint type: Azure Instance Metadata Service (IMDS)

Identity type: Microsoft Graph REST API v1.0
Microsoft Identity Platform OAuth 2.0 access token

Identity type: Service principal
System-assigned managed identity
User-assigned managed identity

Answer:

Explanation:

Answer Area

Endpoint type: Azure Instance Metadata Service (IMDS)

Identity type: Microsoft Graph REST API v1.0
Microsoft Identity Platform OAuth 2.0 access token

Identity type: Service principal
System-assigned managed identity
User-assigned managed identity

Explanation:

Answer Area

Endpoint type: Azure Instance Metadata Service (IMDS)

Identity type: System-assigned managed identity

NEW QUESTION # 33

You need to recommend an identity security solution for the Azure AD tenant of Litware. The solution must meet the identity requirements and the regulatory compliance requirements.

What should you recommend? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

Answer Area

For the delegated management of users and groups, use:

- AD DS organizational units
- Azure AD administrative units
- Custom Azure AD roles

To ensure that you can perform leaked credential detection:

- Enable password hash synchronization in the Azure AD Connect deployment
- Enable Security defaults in the Azure AD tenant of Litware
- Replace pass-through authentication with Active Directory Federation Services

Answer:

Explanation:
