

Latest NCP-DB Exam Guide & Reliable NCP-DB Practice Materials

DOWNLOAD the newest Getcertkey NCP-DB PDF dumps from Cloud Storage for free: https://drive.google.com/open?id=10IL7mzRLYNMk76bo_AlzsbJwwRpYet7c

All we want you to know is that people are at the heart of our manufacturing philosophy, for that reason, we place our priority on intuitive functionality that makes our Nutanix Certified Professional (NCP) exam question to be more advanced. Our NCP-DB exam prep is capable of making you test history and review performance, and then you can find your obstacles and overcome them. In addition, once you have used this type of NCP-DB Exam Question online for one time, next time you can practice in an offline environment.

Nutanix NCP-DB Exam Syllabus Topics:

Topic	Details
Topic 1	Describe NDB Concepts: It defines database and NDB terminology. The topic also explains benefits and features of NDB.
Topic 2	Monitor Alerts and Storage Usage Within an NDB Implementation: It is all about monitoring alerts and management of storage usage.
Topic 3	Administer an NDB Environment: While focusing on the administration of an NDB environment, this topic focuses on managing NDB profiles, applying procedural concepts, and managing networks in NDB. Lastly, the topic explains sub-topics of managing access controls in NDB and identifying how to use NDB APIs and CLI.
Topic 4	Protect NDB-managed Databases Using Time Machine: SLA retention policies, source databases, clones, protection of databases, and Data Access Management (DAM) policies are discussed in this topic.

Reliable NCP-DB Practice Materials | NCP-DB Reasonable Exam Price

In the past few years, our NCP-DB study materials have helped countless candidates pass the NCP-DB exam. After having a related certification, some of them encountered better opportunities for development, some went to great companies, and some became professionals in the field. NCP-DB Study Materials have stood the test of time and market and received countless praises. We will transfer our NCP-DB test prep to you online immediately, and this service is also the reason why our NCP-DB study

torrent can win people's heart and mind.

Nutanix Certified Professional - Database Automation (NCP-DB) v6.5 Sample Questions (Q210-Q215):

NEW QUESTION # 210

An administrator needs to replace the default Nutanix self-signed certificates in Era. Which SSL Certificate file format is supported?

- A. PKCS#7
- B. DER encoded binary X.509
- C. PKCS#12
- D. Base-64 encoded X 509

Answer: D

Explanation:

According to the Nutanix Database Automation (NCP-DB) learning documents, Nutanix Era supports x509 certificates in Base-64 encoded PEM format¹. This format is used when an administrator needs to replace the default Nutanix self-signed certificates in Era¹.

NEW QUESTION # 211

When provisioning Microsoft SQL Server utilizing database groups, which statement is true?

- A. Microsoft recommends 35 databases within a single database group.
- B. Databases within a database group must be all of the same size.
- C. NDB supports one database group per database server VM or database server cluster
- D. Databases within a database group can share multiple Time Machine configurations.

Answer: D

Explanation:

In NDB, database groups are used to manage multiple Microsoft SQL Server databases collectively, enabling centralized administration and protection policies. The statement "Databases within a database group can share multiple Time Machine configurations" is true. A Time Machine in NDB manages snapshots and log backups for recovery, and a database group can be associated with multiple Time Machine configurations to support different retention policies or recovery point objectives (RPOs) for the databases within the group.

This flexibility allows tailored data protection strategies.

Other options are incorrect:

* A. Microsoft recommends 35 databases within a single database group: There is no specific Microsoft recommendation for this limit; NDB imposes its own constraints based on performance and resource usage.

* C. NDB supports one database group per database server VM or database server cluster: NDB allows multiple database groups per server or cluster, depending on configuration.

* D. Databases within a database group must be all of the same size: NDB does not enforce uniform database sizes within a group. Thus, the verified answer is B, reflecting NDB's Time Machine flexibility.

NEW QUESTION # 212

Refer to the exhibit.

[2023-01-18 16:35:55.131] [144584367732-44] [NDB] [8898-NOPID], Operation results	
Operation Name	Provision Availability Group Database
Operation Status	FAILED
Failure Time	2023-01-18 14:33:46 (America/New_York)
Failed Step	Create and Register Database Server VMs
Operation Error	Provisioning of all the dbServers simultaneously took more than two hours

An administrator attempts to provision their first clustered database environment with NDB. The operation fails with the Operation Error shown in the exhibit.

Which database engine was being deployed during this operation?

- A. PostgreSQL
- B. Oracle
- **C. MySQL**
- D. Microsoft SQL

Answer: C

Explanation:

The error message in the exhibit indicates that the operation failed during the "Create and Register Database Server VMs" step because "Provisioning of all the observers simultaneously took more than two hours." This type of error is associated with MySQL, as it involves observers which are a part of MySQL Group Replication, used for ensuring high availability¹. The other options are not related to the error message, as they do not use observers or Group Replication for clustering. References:

* 1: Nutanix Database Automation (NCP-DB) course, Module 5: Database High Availability, Lesson 5.2:

MySQL Group Replication, slide 7

NEW QUESTION # 213

How can NDB updates be downloaded for a dark site?

- A. Go into the Administrator > Maintenance section in NDB and download the most recent version.
- B. Download the upgrade bundle from the Nutanix support Portal and upload it to Prism Element > Images
- C. Change the network that NDB is hosted on so it has access to <https://download.nutanix.com>
- **D. Download the upgrade bundle from the Nutanix Support portal and manually upload it to the NDB server.**

Answer: D

Explanation:

A "dark site" refers to an environment with no internet connectivity, requiring manual processes for software updates. For Nutanix Database Service (NDB) in such a setup, updates cannot be downloaded automatically from the internet. The correct procedure is to:

* Download the upgrade bundle: Access the Nutanix Support Portal from a system with internet access and download the NDB upgrade bundle specific to the version (e.g., v6.10 or later).

* Manually upload it to the NDB server: Transfer the bundle to the NDB server (e.g., via SCP or USB) and upload it through the NDB interface under the "Software Updates" or "Maintenance" section.

Other options are incorrect in a dark site context:

* B: The "Administrator > Maintenance" section allows initiating updates, but it cannot download files without internet access.

* C: Changing the network to access <https://download.nutanix.com> defeats the dark site's isolation and is impractical.

* D: Uploading to Prism Element > Images is for VM images or other Prism-specific content, not NDB software updates.

Thus, the verified answer is A, aligning with Nutanix's documented process for dark site updates.

* Nutanix Certified Professional - Database Automation (NCP-DB) v6.5 Knowledge Objectives, Section 2: Deploy and Configure an NDB Solution, Objective 2.3: Perform NDB Updates (applicable to v6.10).

* Nutanix NDB Administration Guide: "Updating NDB in a Dark Site Environment" section.

NEW QUESTION # 214

An administrator is trying to register a Nutanix cluster for Multi-Cluster provisioning.

The Era cluster is setup with following configuration:

* Era Multi-Cluster is enabled.

Era Server storage container and Era provisioning container are different on the Era cluster. What should the administrator configure?

- A. Disks that span across Era Server storage container and Era provisioning container.
- B. Storage mapping between Era server container end remote container that is used for provisioning DBs,
- C. Separate remote containers for provisioning Era Agent VM end database Server VMs.
- D. Storage mapping between Era container and a remote container that is not used for provisioning databases.

Answer: B

Explanation:

In a Nutanix Era setup where Multi-Cluster is enabled and the Era Server storage container and Era provisioning container are different on the Era cluster, the administrator should configure a storage mapping between the Era server container and the remote container that is used for provisioning databases¹. This is because Nutanix Era uses the storage container specified during the registration of the Nutanix cluster for provisioning databases¹. Therefore, a storage mapping needs to be established between the Era server container and the remote container used for provisioning to ensure that the databases are provisioned correctly¹.

NEW QUESTION # 215

• • • • •

The price for the NCP-DB certification test's registration is somewhere around \$100 to \$1000. Thus, you would never risk your precious time and money. Getcertkey offers a demo version of the Nutanix Certified Professional - Database Automation (NCP-DB) v6.5 (NCP-DB) practice material which is totally free. You can try a free demo to make yourself more confident about the authenticity of the Nutanix Certified Professional - Database Automation (NCP-DB) v6.5 (NCP-DB) product. After buying the NCP-DB material, you can instantly use it.
