

Latest NCP-US-6.5 Real Test & Exam Dumps NCP-US-6.5 Collection

Nutanix NCP-DB-6.5 Practice Questions

Nutanix Certified Professional - Database Automation (NCP-DB) v6.5

Order our NCP-DB-6.5 Practice Questions Today and Get Ready to Pass with Flying Colors!

NCP-DB-6.5 Practice Exam Features | QuestionsTube

- Latest & Updated Exam Questions
- Subscribe to FREE Updates
- Both PDF & Exam Engine
- Download Directly Without Waiting

<https://www.questionstube.com/exam/ncp-db-6-5/>

At QuestionsTube, you can read NCP-DB-6.5 free demo questions in pdf file, so you can check the questions and answers before deciding to download the Nutanix NCP-DB-6.5 practice questions. These free demo questions are parts of the NCP-DB-6.5 exam questions. Download and read them carefully, you will find that the NCP-DB-6.5 test questions of QuestionsTube will be your great learning materials online. Share some NCP-DB-6.5 exam online questions below.

P.S. Free & New NCP-US-6.5 dumps are available on Google Drive shared by Prep4SureReview: https://drive.google.com/open?id=1otN8_rbOSwXCn0Cwk-qRlxowe-9FVy9-

Do you always feel that your gains are not proportional to your efforts without valid NCP-US-6.5 study torrent? Do you feel that you always suffer from procrastination and cannot make full use of your sporadic time? If your answer is absolutely yes, then we would like to suggest you to try our NCP-US-6.5 Training Materials, which are high quality and efficiency test tools. Your success is 100% ensured to pass the NCP-US-6.5 exam and acquire the dreaming NCP-US-6.5 certification which will enable you to reach for more opportunities to higher incomes or better enterprises.

Nutanix NCP-US-6.5 Exam Syllabus Topics:

Topic	Details
Topic 1	• Troubleshoot issues related to Nutanix Files • Explain Data Management processes for Files and Objects

Topic 2	• Given a scenario, configure shares, buckets, and or Volume Groups • Troubleshoot a failed upgrade for Files • Objects
Topic 3	• Configure Nutanix Files with advanced features • Determine the appropriate method to ensure data availability • recoverability
Topic 4	• Configure and Utilize Nutanix Unified Storage • Identify the steps to deploy Nutanix Objects
Topic 5	• Analyze and Monitor Nutanix Unified Storage • Describe the use of Data Lens for data security
Topic 6	• Utilize File Analytics for data security • Troubleshoot Nutanix Unified Storage • Configure Nutanix Volumes

Exam Dumps NCP-US-6.5 Collection | NCP-US-6.5 Valid Braindumps Ebook

Nutanix NCP-US-6.5 is a certification exam to test IT expertise and skills. If you find a job in the IT industry, many human resource managers in the interview will reference what Nutanix related certification you have. If you have Nutanix NCP-US-6.5 Certification, apparently, it can improve your competitiveness.

Nutanix Certified Professional - Unified Storage (NCP-US) v6.5 Sample Questions (Q37-Q42):

NEW QUESTION # 37

Immediately after creation, the administrator is asked to change the name of Objects store. How will the administrator achieve this request?

- A. The Objects store can only be renamed if hosted on ESXi.
- **B. Delete and recreate a new Objects store with the updated name.**
- C. Enable versioning and then rename the Objects store, disable versioning
- D. Update the name of the Objects stores by using a CORS XML file

Answer: B

Explanation:

The administrator can achieve this request by deleting and recreating a new Objects store with the updated name. Objects is a feature that allows users to create and manage object storage clusters on a Nutanix cluster. Objects clusters can provide S3-compatible access to buckets and objects for various applications and users. Objects clusters can be created and configured in Prism Central. However, once an Objects cluster is created, its name cannot be changed or edited. Therefore, the only way to change the name of an Objects cluster is to delete the existing cluster and create a new cluster with the updated name. Reference: Nutanix Objects User Guide, page 9; Nutanix Objects Solution Guide, page 8

NEW QUESTION # 38

An administrator is expanding an Objects store cluster. Which action should the administrator take to ensure the environment is configured properly prior to performing the installation?

- A. Configure NTP on only Prism Central.
- B. Configure DNS on only Prism Element.
- **C. Upgrade Prism Element to 5.20 or later.**

- D. Upgrade MSP to 2.0 or later.

Answer: C

Explanation:

Nutanix Objects, part of Nutanix Unified Storage (NUS), is deployed as Object Store Service VMs on a Nutanix cluster. Expanding an Objects store cluster involves adding more resources (e.g., nodes, Object Store Service VMs) to handle increased demand. Prior to expansion, the environment must meet certain prerequisites to ensure a successful installation.

Analysis of Options:

* Option A (Configure NTP on only Prism Central): Incorrect. Network Time Protocol (NTP) synchronization is critical for Nutanix clusters, but it must be configured on both Prism Central and Prism Element (the cluster) to ensure consistent time across all components, including Object Store Service VMs. Configuring NTP on only Prism Central is insufficient and can lead to time synchronization issues during expansion.

* Option B (Upgrade MSP to 2.0 or later): Incorrect. MSP (Microservices Platform) is a Nutanix component used for certain services, but it is not directly related to Nutanix Objects expansion. Objects relies on AOS and Prism versions, not MSP, and there is no specific MSP version requirement mentioned in Objects documentation for expansion.

* Option C (Upgrade Prism Element to 5.20 or later): Correct. Nutanix Objects has specific version requirements for AOS (which runs on Prism Element) to support features and ensure compatibility during expansion. According to Nutanix documentation, AOS 5.20 or later is recommended for Objects deployments and expansions, as it includes stability improvements, bug fixes, and support for newer Objects features. Upgrading Prism Element to 5.20 or later ensures the environment is properly configured for a successful Objects store cluster expansion.

* Option D (Configure DNS on only Prism Element): Incorrect. DNS configuration is important for name resolution in a Nutanix environment, but it must be configured for both Prism Element and Prism Central, as well as for the Object Store Service VMs. Configuring DNS on only Prism Element is insufficient, as Objects expansion requires proper name resolution across all components, including Prism Central for management.

Why Option C?

Expanding a Nutanix Objects store cluster requires the underlying AOS version (managed via Prism Element) to meet minimum requirements for compatibility and stability. AOS 5.20 or later includes necessary updates for Objects, making this upgrade a critical prerequisite to ensure the environment is properly configured for expansion. Other options, like NTP and DNS, are also important but require broader configuration, and MSP is not relevant in this context.

Exact Extract from Nutanix Documentation:

From the Nutanix Objects Administration Guide (available on the Nutanix Portal):

"Before expanding a Nutanix Objects store cluster, ensure that the environment meets the minimum requirements. Upgrade Prism Element to AOS 5.20 or later to ensure compatibility, stability, and support for Objects expansion features."

:

Nutanix Objects Administration Guide, Version 4.0, Section: "Prerequisites for Objects Expansion" (Nutanix Portal).

Nutanix Certified Professional - Unified Storage (NCP-US) Study Guide, Section: "Nutanix Objects Cluster Expansion".

NEW QUESTION # 39

What is a prerequisite for deploying Smart DR?

- A. Requires one-to-many shares.
- B. The Files Manager must have at least three file servers.
- C. The primary and recovery file servers must have the same domain name.
- D. Open TCP port 7515 on all client network IPs (uni-directionally on the source and recovery file servers).

Answer: D

Explanation:

Smart DR is a feature that allows share-level replication between active file server instances for disaster recovery. To configure Smart DR, one of the prerequisites is to open TCP port 7515 on all client network IPs (uni-directionally on the source and recovery file servers). This port is used for communication between the FSVMs and the replication engine. Reference: Nutanix Files Administration Guide, page 79; Nutanix Files Solution Guide, page 9

NEW QUESTION # 40

An administrator has received an alert AI60068 - ADSDuplicationIPDetected details of alert as follows:

```

Block Serial Number: 16SMXXXXXXX
alert_time: Thu Jan 19 2023 23:14:10 GMT-0800 (PST)
alert_type: AFSDuplicateIPDetected
alert_msg: A160068: Duplicate IP address detected for a file server VMs
for {file_server_name}. Error Message: {message}
cluster_id: xxxxx
alert_body: No Alert Body Available

```

Which error log should the administrator review to determine the related Duplicate IP address involved?

- A. Solver.log
- B. Tcpkill.log
- C. Minerva.nvm.log
- D. Minerva_cvm.log

Answer: C

Explanation:

<https://portal.nutanix.com/page/documents/kbs/details?targetId=kA00e000000CvHICA0>

NEW QUESTION # 41

Which two steps are required for enabling Data Lens? (Choose two.)

- A. Configure the Data Services IP in Prism Central.
- B. Add File Services VM admin credentials to a MyNutanix account.
- C. In Prism, enable Pulse health monitoring.
- D. Configure a MyNutanix account to access the Data Lens console.

Answer: B,D

Explanation:

Nutanix Data Lens, part of Nutanix Unified Storage (NUS), provides data governance, analytics, and ransomware protection for Nutanix Files. Enabling Data Lens involves setting up access to the Data Lens service, which is a cloud-based service hosted by Nutanix, and integrating it with the on-premises file server.

* Analysis of Options:

* Option A (In Prism, enable Pulse health monitoring): Incorrect. Pulse is a Nutanix feature that collects telemetry data for health monitoring and support, sending it to Nutanix Insights. While Pulse is recommended for overall cluster health, it is not a required step for enabling Data Lens. Data Lens operates independently of Pulse and focuses on file server analytics, not cluster health monitoring.

* Option B (Configure a MyNutanix account to access the Data Lens console): Correct. Data Lens is a cloud-based service, and accessing its console requires a MyNutanix account. The administrator must configure the MyNutanix account credentials in Prism Central to enable Data Lens and access its features, such as the Data Lens dashboard for monitoring file server activity. This is a mandatory step to integrate with the cloud service.

* Option C (Configure the Data Services IP in Prism Central): Incorrect. The Data Services IP is used for iSCSI traffic in Nutanix Volumes (as noted in Questions 25 and 31), not for Data Lens. Data Lens communicates with the Nutanix cloud (insights.nutanix.com) over the internet and does not require a Data Services IP configuration.

* Option D (Add File Services VM admin credentials to a MyNutanix account): Correct. To enable Data Lens for a file server, the administrator must provide the File Services VM (FSVM) admin credentials, which are used to authenticate and integrate the file server with the Data Lens service.

These credentials are added via the MyNutanix account configuration in Prism Central, allowing Data Lens to access the file server for monitoring and analytics.

* Selected Steps:

* B: Configuring a MyNutanix account is required to access the Data Lens console and enable the service.

* D: Adding FSVM admin credentials to the MyNutanix account ensures that Data Lens can authenticate and monitor the file server.

* Exact Extract from Nutanix Documentation: From the Nutanix Data Lens Administration Guide (available on the Nutanix Portal):

* "To enable Data Lens, configure a MyNutanix account in Prism Central to access the Data Lens console. Additionally, add the File Services VM admin credentials to the MyNutanix account to allow Data Lens to authenticate with the file server and enable monitoring and analytics features."

:
