The price for NSE7_LED-7.0 training materials is reasonable, and no matter you are a student at school or an employee in the company, you can afford it. In addition, NSE7_LED-7.0 exam materials cover most of knowledge points for the exam, and you can pass the exam as well as improve your professional ability in the process of learning. NSE7_LED-7.0 Exam Materials are high-quality, and you can improve your efficiency. We have online and offline chat service. If you have any questions about NSE7_LED-7.0 exam materials, you can contact us, and we will give you reply as soon as possible.

Fortinet NSE7_LED-7.0 certification exam covers a broad range of topics related to LAN Edge solutions, including but not limited to LAN Edge architecture, security policies, routing protocols, network virtualization, and high-availability solutions. NSE7_LED-7.0 exam is divided into multiple sections, each of which focuses on a specific area of LAN Edge solutions. Candidates are required to demonstrate their understanding of each section by answering multiple-choice questions and performing hands-on tasks using Fortinet's products.

The NSE7_LED-7.0 certification exam is a comprehensive exam that covers a range of topics, including Fortinet Secure SD-WAN, FortiGate Cloud-Managed Security, FortiNAC, and FortiSwitch. NSE7_LED-7.0 exam is designed to assess the candidate's knowledge and skills in deploying, configuring, and managing Fortinet security solutions in a LAN Edge environment. NSE7_LED-7.0 Exam is also designed to test the candidate's ability to troubleshoot and resolve issues related to Fortinet security solutions.

Fortinet NSE7_LED-7.0 (Fortinet NSE 7 - LAN Edge 7.0) Certification Exam is a comprehensive certification program designed to validate the skills and knowledge required to implement and manage Fortinet's LAN Edge solution. NSE7_LED-7.0 exam is intended for network professionals who are responsible for the design, implementation, and management of LAN Edge solutions based on Fortinet products. Fortinet NSE 7 - LAN Edge 7.0 certification demonstrates the candidates' expertise in deploying and managing FortiGate, FortiSwitch, and FortiAP devices to provide secure and reliable LAN Edge connectivity.

NSE7_LED-7.0 Exam Course & NSE7_LED-7.0 Learning Materials

To make this task easier for you, Fortinet provides you with the most reliable and concise practice material, to pass the Fortinet NSE7_LED-7.0 in the first go. We make sure that a more confident and well-prepared student enters the Fortinet NSE7_LED-7.0. This is a convenient and manageable e-book format that contains actual Fortinet NSE7_LED-7.0 questions.

Fortinet NSE 7 - LAN Edge 7.0 Sample Questions (Q27-Q32):

NEW QUESTION # 27

Which CLI command should an administrator use to view the certificate verification process in real time?

- A. diagnose debug application foauthd -1
- **B. diagnose debug application authd -1**
- C. diagnose debug application radiusd -1
- D. diagnose debug application fibamd -1

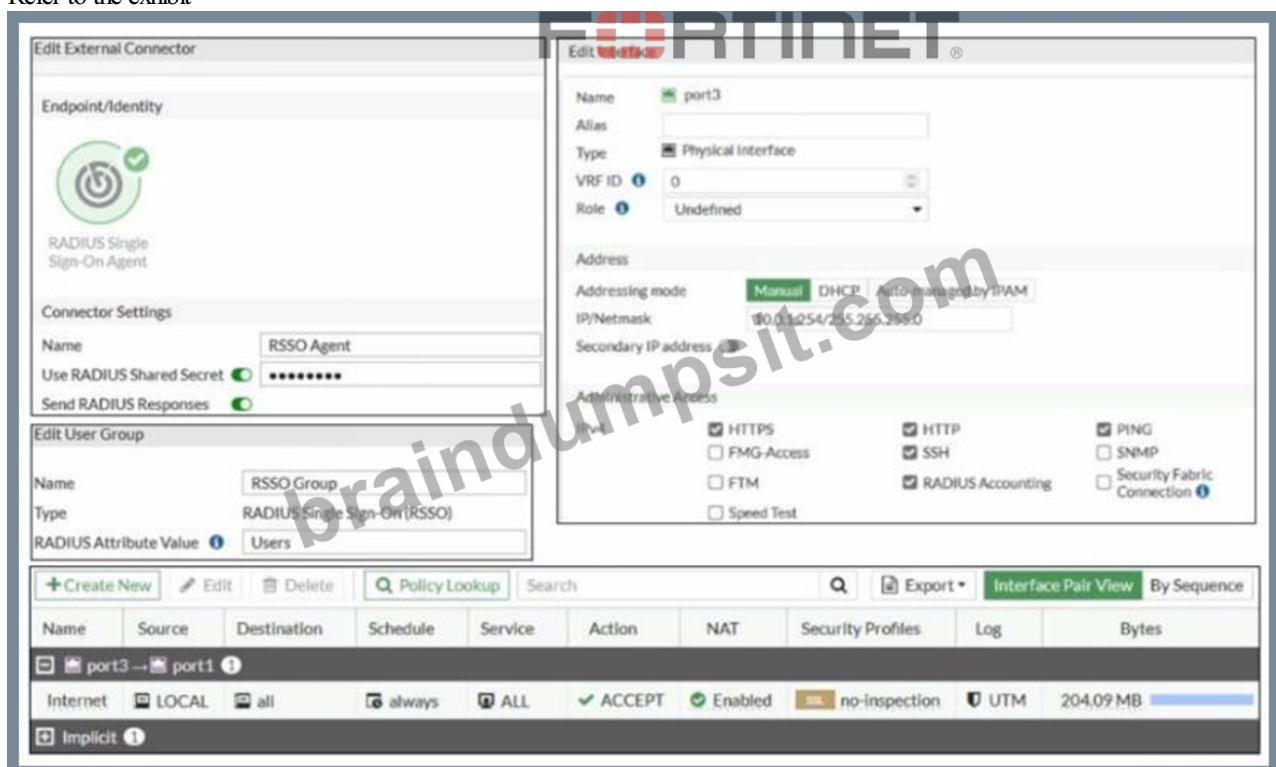

Answer: B

Explanation:

According to the FortiOS CLI Reference Guide, "The diagnose debug application foauthd command enables debugging of certificate verification process in real time." Therefore, option A is true because it describes the CLI command that an administrator should use to view the certificate verification process in real time. Option B is false because diagnose debug application radiusd -1 enables debugging of RADIUS authentication process, not certificate verification process. Option C is false because diagnose debug application authd -1 enables debugging of authentication daemon process, not certificate verification process. Option D is false because diagnose debug application fibamd -1 enables debugging of FSSO daemon process, not certificate verification process.

NEW QUESTION # 28

Refer to the exhibit

Examine the FortiGate RSSO configuration shown in the exhibit

FortiGate is configured to receive RADIUS accounting messages on port3 to authenticate RSSO users. The users are located behind port3 and the internet link is connected to port1. FortiGate is processing incoming RADIUS accounting messages successfully and RSSO users are getting associated with the RSSO Group user group. However, all the users are able to access the internet, and the administrator wants to restrict internet access to RSSO users only. Which configuration change should the administrator make to fix the problem?

- A. Change the RADIUS Attribute Value setting to match the name of the RADIUS attribute containing the group membership information of the RSSO users
- B. Enable Security Fabric Connection on port3
- **C. Add RSSO Group to the firewall policy**
- D. Create a second firewall policy from port3 to port1 and select the target destination subnets

Answer: C

Explanation:

Explanation

According to the exhibit, the firewall policy from port3 to port1 has no user group specified, which means that it allows all users to access the internet. Therefore, option B is true because adding RSSO Group to the firewall policy will restrict internet access to

RSSO users only. Option A is false because changing the RADIUS Attribute Value setting will not affect the firewall policy, but rather the RSSO user group membership. Option C is false because enabling Security Fabric Connection on port3 will not affect the firewall policy, but rather the communication between FortiGate and other Security Fabric devices. Option D is false because creating a second firewall policy from port3 to port1 will not affect the existing firewall policy, but rather create a redundant or conflicting policy.

NEW QUESTION # 29

Which EAP method requires the use of a digital certificate on both the server end and the client end?

- A. EAP-TTLS
- B. PEAP
- C. EAP-GTC
- D. EAP-TLS

Answer: D

Explanation:

According to the FortiGate Administration Guide, "EAP-TLS is the most secure EAP method. It requires a digital certificate on both the server end and the client end. The server and client authenticate each other using their certificates." Therefore, option D is true because it describes the EAP method that requires the use of a digital certificate on both the server end and the client end. Option A is false because EAP-TTLS only requires a digital certificate on the server end, not the client end. Option B is false because PEAP also only requires a digital certificate on the server end, not the client end. Option C is false because EAP-GTC does not require a digital certificate on either the server end or the client end.

NEW QUESTION # 30

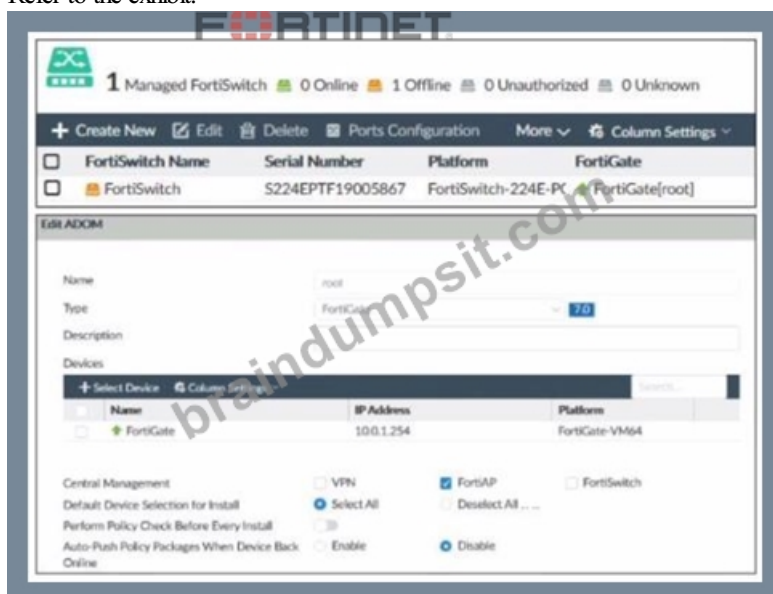

Which two statements about FortiSwitch trunks are true? (Choose two.)

- A. By default, when connecting two FortiSwitch devices to each other, a trunk is automatically created between the switches.
- B. A trunk is a link aggregation group interface.
- C. Trunks do not support tagged Ethernet frames.
- D. LACP is not supported.

Answer: A,B

NEW QUESTION # 31

Refer to the exhibit.

Examine the FortiManager information shown in the exhibit

Which two statements about the FortiManager status are true" (Choose two)

- A. FortiSwitch manager is working in per-device management mode
- B. FortiSwitch is not authorized
- C. FortiSwitch is authorized and offline
- D. FortiSwitch manager is working in central management mode

Answer: A,C

NEW QUESTION # 32

.....

There are Fortinet NSE 7 - LAN Edge 7.0 (NSE7_LED-7.0) exam questions provided in Fortinet NSE 7 - LAN Edge 7.0 (NSE7_LED-7.0) PDF questions format which can be viewed on smartphones, laptops, and tablets. So, you can easily study and prepare for your Fortinet NSE 7 - LAN Edge 7.0 (NSE7_LED-7.0) exam anywhere and anytime. You can also take a printout of these Fortinet PDF Questions for off-screen study.
