

# Latest Oracle Business Intelligence Foundation Suite 11g Essentials practice test & 1Z1-591 troytec pdf

P.S. Free 2025 Oracle 1Z1-591 dumps are available on Google Drive shared by SureTorrent: <https://drive.google.com/open?id=1fXR6KdKzNC9VoQ7Z1NwAxa8XRFA9tSsY>

Users can customize the time and 1Z1-591 questions of Oracle 1Z1-591 practice tests according to their needs. You can give more than one test and track the progress of your previous attempts to improve your marks on the next try. These 1Z1-591 mock tests are made for customers to note their mistakes and avoid them in the next try to pass Oracle Business Intelligence Foundation Suite 11g Essentials (1Z1-591) exam in a single try.

## Certification Path

There is no prerequisite for this Oracle 1Z0-591 exam.

Oracle 1Z0-591 is an essential certification for professionals who want to validate their knowledge and expertise in Oracle Business Intelligence Foundation Suite 11g. It is a mandatory requirement for those professionals who work with Oracle Business Intelligence in their organizations. Oracle Business Intelligence is a suite of tools designed to help organizations gain insight and make data-driven decisions.

## 1Z1-591 Exam Dumps Demo, 1Z1-591 Pdf Torrent

It is known to us that the privacy is very significant for every one and all companies should protect the clients' privacy. Our company is no exception, and you can be assured to buy our 1Z1-591 exam prep. Our company has been focusing on the protection of customer privacy all the time. We can make sure that we must protect the privacy of all customers who have bought our 1Z1-591 Test Questions. If you decide to use our 1Z1-591 test torrent, we are assured that we recognize the importance of protecting your privacy and safeguarding the confidentiality of the information you provide to us. We hope you will use our 1Z1-591 exam prep with a happy mood, and you don't need to worry about your information will be leaked out.

Oracle 1Z1-591 Certification Exam is an important step for professionals seeking to demonstrate their expertise in business intelligence and data analytics. By passing the exam, individuals can enhance their career prospects and contribute valuable insights to their organization.

## Oracle Business Intelligence Foundation Suite 11g Essentials Sample Questions (Q105-Q110):

### NEW QUESTION # 105

How do Dynamic Repository Variables differ from Static Repository Variables?

- A. Dynamic Repository Variables cannot be used in the Expression Builder.
- B. Dynamic Repository Variables are not initialized by the Initialization Block.

- C. Dynamic Repository Variables cannot be used in a CASE statement.
- D. Dynamic Repository Variables can be changed by data that is returned from queries.

**Answer: D**

Explanation:

Dynamic Repository Variables:

You initialize dynamic repository variables in the same way as static variables, but the values are refreshed by data returned from queries. When defining a dynamic repository variable, you will create an initialization block or use a pre-existing one that contains a SQL query. You will also set up a schedule that the Oracle BI Server will follow to execute the query and periodically refresh the value of the variable.

Note: The value of a static repository value is initialized in the Variable dialog box. This value persists, and does not change until an Oracle BI Administrator decides to change it.

#### NEW QUESTION # 106

Identify the two types of storage for Essbase.

- A. OLAP Storage and Cell Storage
- B. Aggregate Storage and Cell Storage
- C. Aggregate Storage Option and Block Storage Option
- D. Aggregate Storage and Hybrid Columnar Compression

**Answer: C**

Explanation:

Oracle Essbase developers creating planning and budgeting applications have been keenly aware of the advantages and disadvantages of the two different storage types available to them:

\*Block storage option (BSO) databases support a wide range of calculations, including forecasts, allocations, and aggregations through procedural calculation scripts. The results of these calculations can be written back to the database, but applications that use BSO storage are limited to about 10 dimensions and member counts in the low hundreds of thousands.

\*Aggregate storage option (ASO) databases can support about 20 dimensions and member counts in the millions. ASO databases use multidimensional functions rather than procedural scripts to perform calculations, but the results of queries cannot be stored back in the database, making ASO unsuitable for most financial management applications.

#### NEW QUESTION # 107

A customer would like to create a change and a % Change for Revenue at the same time. How would they accomplish this?

- A. Defining them in the physical data model
- B. Using the Calculation Wizard
- C. Defining them in the Presentation Layer
- D. Using the Expression Builder

**Answer: B**

Explanation:

After creating your base metrics, try using the Calculation Wizard to automate the process of creating time-series metrics or comparison metrics such as: Change, Percent Change, Index, and Percent. The Wizard may save you many hours of time and frustration, especially if you have to create more than a handful of these metrics. In addition, the Wizard allows you to include customized logic to handle nulls in the base metrics.

You may refer to the Oracle documentation for further detail.

#### NEW QUESTION # 108

The ODBC DSN is never used for \_\_\_\_\_.

- A. Changing passwords
- B. Initial import of the physical layer metadata on a Windows server
- C. Query execution and data access on a Windows server
- D. Comparing RPDs

- E. Initial import of the physical layer metadata, query execution, and data access on a Windows Server

**Answer: D**

Explanation:

You do not use ODBC DSN to compare repositories.

Note: When an ODBC based application connects to a database, it connects to a logical name, the Data Source Name (DSN), which identifies the datasource to which it wants to connect.

Some external repository of configuration information holds the various DSN values that are available, together with the necessary configuration and control information needed by the ODBC driver to establish a connection and manage usage of the data source. The DSN (data source name) is a data structure that contains the information about a specific data source (database, ...), typically used by an ODBC driver to be able to connect to it.

The DSN contains information about the data source such as:

the name,  
the directory,  
and the driver.

On Windows, the DSN also specifies the ODBC driver to be used to access the database.

### NEW QUESTION # 109

Which language is used by OBIEE to query Essbase?

- A. SQL
- **B. MDX**
- C. LINQ
- D. DMX

**Answer: B**

Explanation:

Explanation

The Essbase cube looks just like any other relational star schema in my Presentation Layer, however when it is queried Oracle BI Server will issue MDX queries against a multi-dimensional data source, rather than an SQL query against a relational star schema.

### NEW QUESTION # 110
