You give us a trust and we reward you for a better future.

Oracle 1Z0-083 exam is designed for professionals who are seeking to become certified in Oracle Database Administration II. Oracle Database Administration II certification exam is the second step in the Oracle Database Administrator certification track and is intended for candidates who already possess a solid foundation in database administration. 1Z0-083 Exam assesses the candidate's knowledge and skills in advanced database administration topics such as database security, backup and recovery,

performance tuning, and high availability.

Oracle Database Administration II Sample Questions (Q221-Q226):

NEW QUESTION # 221

Which two are true about RMAN duplexed backup sets? (Choose two.)

- A. A duplexed backup set always uses twice as many SBT channels as a non-duplexed backup set for the same number of files.
- B. A non-duplexed backup set written to SBT can be duplexed to tape by backing up the backup set that is already on tape.
- C. A duplexed backup set uses the same number of SBT channels as a non-duplexed backup set for the same number of files.
- D. A non-duplexed backup set written to disk can be duplexed to tape by backing up the backup set that is already on disk.
- E. A non-duplexed backup set written to disk can be duplexed to disk by backing up the backup set that is already on disk.
- F. A non-duplexed backup set written to SBT can be duplexed to disk by backing up the backup set that is already on tape.

Answer: A,D

NEW QUESTION # 222

Which three are true about Automatic Workload Repository (AWR), Automatic Database Diagnostic Monitor (ADDM), and the Manageability Monitor (MMON) background process?

- A. AWR snapshots must be deleted when no longer required by ADDM.
- B. ADDM can recommend extending the buffer cache.
- C. By default, MMON creates an AWR snapshot every 30 minutes.
- D. By default, AWR snapshots are automatically purged after eight days.
- E. ADDM performs its analysis only when a DBA requests it.
- F. ADDM can recommend shrinking the buffer cache.

Answer: D,E,F

NEW QUESTION # 223

Which three are true about thresholds, metrics, and server-generated alerts? (Choose three.)

- A. A space usage management alert is automatically cleared after the underlying problem is resolved.
- B. They are generated by SMON when a tablespace is 97% full.
- C. Metrics are statistical counts for a specific unit.
- D. Cleared stateful alerts are displayed by querying DBA_ALERT_HISTORY.
- E. All metrics are instance related.
- F. STATISTICS_LEVEL must be set to ALL to generate alerts.

Answer: A,C,D

Explanation:

A - False. Tablespace Space Usage metris is database related

B - True. Stateful alerts appear in DBA_OUTSTANDING_ALERTS and, when cleared, go to DBA_ALERT_HISTORY C - True. Most alerts (such as "Out of space") are clared automatically when the cause of the problem disappears.

D - False. They're generated by MMON

E - True

F - False. This parameter is not required to generate alerts

NEW QUESTION # 224

Choose four. Which four are true about performing Tablespace Point-In-Time Recovery (TSPITR) using Recovery Manager (RMAN)?

- A. It can be performed repeatedly until the correct time is found without using an RMAN catalog. E)RMAN always includes tablespaces containing UNDO segments in the recovery set.

- [illegible]
