2025 Latest TestKingIT PCNSE PDF Dumps and PCNSE Exam Engine Free Share: <https://drive.google.com/open?id=1ArWZ8jvj0tU97H2iKN71O5t-XTMdsYn>

TestKingIT online digital Palo Alto Networks PCNSE exam questions are the best way to prepare. Using our Palo Alto Networks Certified Network Security Engineer Exam (PCNSE) exam dumps, you will not have to worry about whatever topics you need to master. To practice for a Palo Alto Networks PCNSE Certification Exam in the software (free test), you should perform a self-assessment. The Palo Alto Networks PCNSE practice test software keeps track of each previous attempt and highlights the improvements with each attempt.

How to study for the PCNSE Exam

PCNSE practice exams and **PCNSE practice test** can be a great help in preparation. Smart Candidates who want to build a solid foundation in all exam topics and related technologies usually combine video lectures with study guides to reap the benefits of both but there is one crucial preparation tool as often overlooked by most candidates the practice exams.

PCNSE practice exams are built to make students comfortable with the real exam environment. Statistics have shown that most students fail not due to that preparation but due to exam anxiety the fear of the unknown. TestKingIT expert team recommends you to prepare some notes on these topics along with it don't forget to practice **PCNSE exam dumps** which have been written by our expert team, both these will help you a lot to clear this exam with good marks.

Palo Alto Networks PCNSE (Palo Alto Networks Certified Security Engineer (PCNSE) PAN-OS 10.0) Exam is a certification program designed to validate the proficiency and expertise of security engineers in deploying Palo Alto Networks Next-Generation Firewall solutions. Palo Alto Networks Certified Network Security Engineer Exam certification exam requires candidates to demonstrate their knowledge, skills, and abilities in designing, configuring, and troubleshooting Palo Alto Networks PAN-OS 10.0 security platforms.

Our desktop software also tracks your progress, and identifies your strengths and weaknesses, to ensure you're getting the best possible experience for the PCNSE Exam. All features of the web-based version are available in the desktop software. But the desktop software works offline and only on Windows computers.

Palo Alto Networks Certified Network Security Engineer Exam Sample Questions (Q371-Q376):

NEW QUESTION # 371

Which two benefits come from assigning a Decryption Profile to a Decryption policy rule with a "No Decrypt" action? (Choose two.)

- A. Block sessions with unsupported cipher suites

- B. Block sessions with client authentication
- C. Block sessions with untrusted issuers
- D. Block credential phishing
- E. Block sessions with expired certificates

Answer: C,E

Explanation:

<https://www.paloaltonetworks.com/documentation/71/pan-os/pan-os/decryption/configure-decryption-exceptions> Block sessions based on certificate status, including blocking sessions with expired certificates, untrusted issuers, unknown certificate status, certificate status check timeouts, and certificate extensions. Block sessions with unsupported versions and cipher suites, and that require using client authentication. <-- this req client Auth, which is not stated Block sessions if the resources to perform decryption are not available or if a hardware security module is not available to sign certificates. Define the protocol versions and key exchange, encryption, and authentication algorithms allowed for SSL Forward Proxy and SSL Inbound Inspection traffic in the SSL Protocol Settings.

NEW QUESTION # 372

A network security administrator has an environment with multiple forms of authentication. There is a network access control system in place that authenticates and restricts access for wireless users, multiple Windows domain controllers, and an MDM solution for company-provided smartphones. All of these devices have their authentication events logged. Given the information, what is the best choice for deploying User-ID to ensure maximum coverage?

- A. Syslog listener
- B. standalone User-ID agent
- C. agentless User-ID with redistribution
- D. captive portal

Answer: A

Explanation:

To obtain user mappings from existing network services that authenticate users-such as wireless controllers, 802.1x devices, Apple Open Directory servers, proxy servers, or other Network Access Control (NAC) mechanisms-Configure User-ID to Monitor Syslog Senders for User Mapping.

<https://docs.paloaltonetworks.com/pan-os/9-1/pan-os-admin/user-id/map-ip-addresses-to-users>

NEW QUESTION # 373

Based on the graphic which statement accurately describes the output shown in the Server Monitoring panel?

The screenshot shows the Palo Alto Networks User-ID configuration interface. The top navigation bar includes tabs for User Mapping, Connection Security, User-ID Agents, Terminal Services Agents, Group Mapping Settings, and Captive Portal Settings. The main configuration area is for the 'lab.local' domain, showing settings for Kerberos and Syslog. The 'Server Monitoring' panel at the bottom displays a table of monitored servers.

Name	Enabled	Type	Status
lab-client	☒	Microsoft Active Directory	Connected

- A. The User-ID agent is connected to a domain controller labeled lab-client
- B. The host lab-client has been found by a domain controller
- C. The User-ID agent is connected to the firewall labeled lab-client
- D. The host lab-client has been found by the User-ID agent.

Answer: A

NEW QUESTION # 374

Which two actions must an engineer take to configure SSL Forward Proxy decryption? (Choose two.)

- A. Configure a SSL/TLS service profile.
- B. Define a Forward Trust Certificate.
- C. Configure SSL decryption rules.
- D. Configure the decryption profile.

Answer: B,C

Explanation:

To configure SSL Forward Proxy decryption on a Palo Alto Networks firewall, certain key components must be set up to ensure secure and effective decryption and inspection of SSL/TLS encrypted traffic:

B: Define a Forward Trust Certificate:

* A Forward Trust Certificate is essential for SSL Forward Proxy decryption. This certificate is used by the firewall to dynamically generate certificates for SSL sites that are trusted. When the firewall decrypts and inspects the traffic and then re-encrypts it, the new certificate presented to the client comes from the Forward Trust Certificate authority. This certificate must be trusted by client devices, often requiring the Forward Trust CA certificate to be distributed and installed on client devices.

C: Configure SSL decryption rules:

* SSL decryption rules are the policies that determine which traffic is to be decrypted. These rules specify the source, destination, service, and URL category, among other criteria. The rules define what traffic the SSL Forward Proxy will apply to, enabling selective decryption based on security and privacy requirements.

Together, these components form the basis of the SSL Forward Proxy decryption setup, allowing for the decryption, inspection, and re-encryption of SSL/TLS encrypted traffic to identify and prevent threats hidden within encrypted sessions.

NEW QUESTION # 375

VPN traffic intended for an administrator's Palo Alto Networks NGFW is being maliciously intercepted and retransmitted by the interceptor. When creating a VPN tunnel, which protection profile can be enabled to prevent this malicious behavior?

- A. Replay
- B. DoS Protection
- C. Web Application
- D. Zone Protection

Answer: A

Explanation:

Explanation
