

Latest PDD Dumps Free, PDD Learning Materials

PowerProtect DD appliance with cloud tier. During migration, the administrator recognizes that file system cleaning on the source system is not possible.

What is the most likely cause of this behavior?

- A. Filesystem is disabled on source system
- B. Source system is running in restricted mode
- C. Migration will restrict all activities on both systems
- D. Migration will restrict all activities on source system

Answer: D

6.What is the recommended sizing of the MaxCapacity parameter in IBM Spectrum Protect when using a PowerProtect DD appliance?

- A. 2 GB
- B. 100 GB
- C. 200 GB
- D. 500 GB

Answer: C

7.An administrator monitors the performance statistics of a PowerProtect DD appliance. Low disk-write rates are shown, and the network inbound traffic is high.

What is the most likely cause of this behavior?

- A. Expired segments
- B. Known segments
- C. Disk failure
- D. NVRAM failure

Answer: B

8.What are some possible network bottlenecks for a PowerProtect DD?

- A. Configuration, wire speeds, switches and routers
- B. Connectivity, firewalls, and routing protocols
- C. Connectivity, routing protocols, and configuration
- D. Routing protocols, switches and routers, and wire speeds

Answer: A

9.When should using Virtual Synthetic backups be considered?

- A. Daily incremental backups are larger than 15% of a normal full backup
- B. PowerProtect DD appliance has more than 10 disks
- C. Backups are nonfile system data such as databases
- D. Backups are large and localized

Answer: A

Perhaps now you are one of the candidates of the PDD exam, perhaps now you are worried about not passing the exam smoothly. Now we have good news for you: our PDD study materials will solve all your worries and help you successfully pass it. With the high pass rate as 98% to 100%, you will find that we have the best PDD learning braindumps which contain the most accurate real exam questions.

NCARB PDD Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none">• Construction Documentation: This section of the exam measures skills of Project Architects and addresses the creation and management of project documentation. Candidates are expected to demonstrate knowledge of documenting building design and site features, preparing detailed architectural drawings, and applying industry standards to produce a coordinated set of construction documents. The section also includes understanding how project changes impact documentation and how to communicate these updates effectively to both the design team and the client.:
Topic 2	<ul style="list-style-type: none">• Project Manual & Specifications: This section of the exam measures the skills of Specifications Writers and emphasizes the importance of developing documentation that goes beyond drawings. Candidates must understand how to identify and prioritize elements needed to prepare, maintain, and refine both the project manual and project specifications. It also assesses the ability to align and coordinate these specifications with the construction documents to ensure consistency and accuracy.

Topic 3	<ul style="list-style-type: none"> Construction Cost: This section of the exam measures the skills of Construction Managers and focuses on the financial side of project execution. It evaluates the ability to analyze construction cost estimates to confirm that they align with project design intent and budgetary constraints. Although this is the smallest section, it is critical for ensuring projects remain feasible and economically viable.
Topic 4	<ul style="list-style-type: none"> Codes & Regulations: This section of the exam measures skills of Building Code Specialists and examines how codes and regulations apply at a detailed level during documentation. Candidates are expected to demonstrate knowledge of compliance with the International Building Code (IBC) as well as other specialty regulations, as well as how to interpret and apply these standards to ensure design and documentation meet legal and safety requirements.
Topic 5	<ul style="list-style-type: none"> Integration of Building Materials & Systems: This section of the exam measures the skills of Architectural Designers and focuses on the ability to resolve and integrate various building systems into cohesive project goals. It covers analyzing architectural systems and technologies, determining the size of structural, mechanical, electrical, and plumbing systems, and incorporating specialty systems such as acoustics, lighting, security, and communications. It also evaluates the ability to detail how multiple building systems work together and to coordinate across disciplines to achieve a unified design.

For Quick Exam preparation download, the NCARB PDD Exam dumps

You must ensure that you can pass the PDD exam quickly, so you must choose an authoritative product. Our PDD exam materials are certified by the authority and have been tested by users. This is a product that you can definitely use with confidence. Of course, our data may make you more at ease. The passing rate of PDD Preparation prep reached 99%, which is a very incredible value, but we did. If you want to know more about our products, you can consult our staff, or you can download our free trial version of our PDD practice engine. We are looking forward to your joining.

NCARB ARE 5.0 Project Development and Documentation Exam Sample Questions (Q27-Q32):

NEW QUESTION # 27

Which of the following documents defines the responsibilities and duties of the contractor during construction?

- A. A101
- B. B101
- C. G702
- D. A201**

Answer: D

Explanation:

A201 is the General Conditions of the Contract for Construction and outlines duties, rights, and responsibilities of the contractor. This includes site supervision, safety, and conformance with documents.

ARE Handbook Objective 1.4 focuses on interpreting contract documents.

NEW QUESTION # 28

Which of the following is an advantage of using a glycol-cooled air conditioning unit for a computer room?

- A. It allows for a greater distance from the computer room to the outside unit.**
- B. It reduces the amount of heat exhausted from the computer room.
- C. Glycol units are a sustainable cooling solution.
- D. Glycol is cheaper than water for cooling.

Answer: A

Explanation:

Glycol-cooled air conditioning systems use a glycol-water mixture as a secondary coolant instead of plain water. Glycol has lower freezing point and better heat transfer properties in certain conditions.

Advantages include:

Longer piping runs without freezing risk, allowing the chiller or cooling unit to be located further away from the computer room, useful for flexible building layouts.

Glycol prevents freezing in cold climates or exposed pipes.

It does not inherently reduce heat exhausted or is necessarily more sustainable than water cooling.

Glycol is generally more expensive than water.

Therefore, the primary advantage is the ability to locate the cooling unit farther from the space being cooled.

NEW QUESTION # 29

An architect has a contract with a local school district to redesign a school reception office to ensure a more efficient interaction between office staff, students, and parents. The following instructions are given to the architect:

- * The renovation scope is limited to the footprint only of the existing reception office.
- * Additional staff is not proposed for the renovated area.
- * The existing ceiling and associated fixtures will be protected from damage during construction.
- * The construction of the renovation must occur during the 10-week summer break.

Which of the following series drawings should be included in the documents set?

- A. Electrical
- B. Mechanical
- C. Structural
- D. Plumbing

Answer: A

Explanation:

The scope involves interior renovation of an existing school reception office, limited to the footprint and protecting existing ceiling and fixtures. Additional staff is not proposed, and construction is during a defined 10-week summer break.

Plumbing is unlikely to require new or modified systems unless specified; not mentioned here.

Structural changes are not indicated since footprint remains same and no structural modifications are noted.

Mechanical changes would typically be required if HVAC or ventilation systems are altered, but the ceiling and fixtures (likely including diffusers) must be protected and are presumably left unchanged.

Electrical modifications are common in interior renovations to accommodate lighting, power outlets, communication systems, and potentially security or reception technology updates.

Thus, electrical drawings should be included to cover these updates.

Reference:

NCARB ARE 5.0 Review Manual, Project Development and Documentation, Construction Documents chapter Typical interior renovation scopes often require electrical updates to accommodate new equipment and code compliance.

NEW QUESTION # 30

An architect is designing a sub-surface drainage system that outfalls into a site retention pond. The recommended shape, size, and slope of the drainage lines need to be determined for primarily which of the following purposes?

- A. To minimize the desired flow
- B. To maximize the desired flow
- C. To obtain the desired velocity
- D. To increase the desired velocity

Answer: C

Explanation:

In subsurface drainage system design:

The shape, size, and slope of drainage lines are selected primarily to achieve a desired flow velocity that prevents sedimentation and clogging but does not cause erosion.

Minimizing or maximizing flow is not the goal; the system must convey the design flow efficiently.

Velocity must be balanced - too low leads to sediment build-up; too high causes pipe damage.

NEW QUESTION # 31

Which of the following must be considered in the proper selection of thermal insulation and moisture control assemblies for a building? (Check all that apply)

- A. Orientation of the building
- B. Exterior climate of the building location
- C. Type of HVAC system to be used
- D. Compatibility of the materials with adjacent materials
- E. Thermal resistance properties of the materials
- F. Interior climate of the space

Answer: A,B,D,E,F

Explanation:

(Interior climate of the space, Exterior climate of the building location, Thermal resistance properties of the materials, Orientation of the building, Compatibility of the materials with adjacent materials) Comprehensive Detailed Explanation with all NCARB ARE 5.0 Project Development and Documentation (PDD) Study Guide References:

Selecting thermal insulation and moisture control assemblies requires a holistic approach considering multiple factors:

A). Interior climate of the space: Critical to determine required insulation levels and vapor barrier placement.

B). Exterior climate: Determines heating or cooling loads, moisture conditions, freeze-thaw cycles.

D). Thermal resistance properties: R-value of materials is fundamental in controlling heat flow.

E). Orientation of the building: Affects solar heat gain, exposure to wind-driven rain, and thus moisture control strategy.

F). Compatibility of materials: Important to avoid chemical or physical degradation, ensure proper adhesion, and maintain performance over time.

C). Type of HVAC system is important for overall building performance but not a primary factor in selecting insulation and moisture control assemblies themselves, which are more dependent on physical and climatic factors.
