NEW QUESTION # 21

What describes essential aspects of project management that must be applied consistently and throughout the project lifecycle?

- A. The people element
- B. The project context
- C. The PRINCE2 practices
- D. The PRINCE2 processes

Answer: C

Explanation:

The PRINCE2 practices represent the essential aspects of project management that must be applied consistently from start to finish in every project. These practices cover key areas such as managing risks, issues, quality, plans, progress, and change. They provide structured guidance and tools to ensure the project remains viable, controlled, and aligned with business objectives.

While processes define the stages and flow of activities, and the people element refers to roles and skills, practices are the ongoing activities and controls embedded throughout the project lifecycle. The project context shapes how practices and processes are tailored but does not itself define the consistent elements.

This consistent application of practices supports governance, transparency, and control, critical for successful project outcomes.

NEW QUESTION # 22

What should be included when transitioning from a project to business as usual to ensure continual improvement?

- A. Defining Key Performance Indicators (KPIs)
- B. Agreeing applicable Service Level Agreements (SLAs)
- C. Establishing regular feedback loops
- D. Providing access to Kanban or team boards

Answer: C

Explanation:

When transitioning from project delivery into business as usual (BAU), establishing regular feedback loops is crucial to ensure continual improvement. Feedback loops enable ongoing monitoring, learning, and adaptation of both products and processes post-transition. They provide mechanisms for capturing user experiences, operational issues, and evolving requirements that inform future iterations and enhancements.

Feedback loops can take many forms, such as user surveys, retrospectives, operational reviews, or service desk reports. Their regularity and structure ensure that BAU teams remain aligned with customer needs and organizational goals while adapting to changes effectively. This approach fosters a culture of continuous learning and agility even after the formal project has closed. Providing access to Kanban or team boards (A) supports transparency and workflow management but is more tactical and internal to teams rather than a strategic approach to continuous improvement across BAU.

Agreeing on SLAs (C) and KPIs (D) define performance and service targets but do not inherently drive feedback or improvement cycles without mechanisms for learning and response.

PRINCE2 Agile highlights the importance of feedback loops as part of the 'progress' and 'quality' practices extended into BAU to sustain value delivery.

Reference: PRINCE2 Agile Foundation Version 2, Section 9.3 "Transition to BAU," and PRINCE2 Agile Study Guide, Chapter 9.

NEW QUESTION # 23

How does agile address the risk associated with the project not being fully understood at the beginning?

- A. By allowing a lot of detail at the start
- B. By avoiding too much detail at the start
- C. By requiring details at the start
- D. By preventing the analysis of details at the start

Answer: D

NEW QUESTION # 24

What term is used to describe boards that display what work needs to be completed for people working on a project?

- A. Work in progress limit
- **B. Highlight report**
- C. Glad! Sad! Mad!
- D. Information radiator

Answer: B
