Google Professional-Cloud-Architect exam materials are successful with high efficiency and high quality to navigate you throughout the process. If you pay attention to using our Professional-Cloud-Architect practice engine, thing will be solved easily. We have favorable quality reputation in the mind of exam candidates these years by trying to provide high quality Google Certified Professional - Cloud Architect (GCP) Professional-Cloud-Architect Study Guide with the lowest prices while the highest quality.

Google Professional-Cloud-Architect (Google Certified Professional - Cloud Architect (GCP)) Certification Exam is designed to test the knowledge, skills and expertise of the individuals in designing, developing, and managing secure, scalable, and highly available cloud solutions using Google Cloud Platform (GCP) technologies. Google Certified Professional - Cloud Architect (GCP) certification is ideal for cloud architects, engineers, developers, and IT professionals who want to demonstrate their ability to design and deploy cloud solutions using GCP.

Google Professional-Cloud-Architect certification exam is a rigorous test of the candidate's knowledge and understanding of Google Cloud Platform. Professional-Cloud-Architect exam consists of multiple-choice questions and is designed to challenge the candidate's ability to apply their knowledge in real-world situations. Google Certified Professional - Cloud Architect (GCP) certification is an excellent way to demonstrate your expertise in cloud computing and enhance your career prospects. With the growing demand for cloud architects, obtaining this certification can help you stand out in a competitive job market.

Google Professional-Cloud-Architect Certification is recognized globally and is highly valued by organizations that want to build and implement cloud solutions using Google Cloud Platform. It is an excellent way for professionals to showcase their expertise in cloud architecture and design and demonstrate their commitment to continuous learning and professional development.

## Latest Professional-Cloud-Architect Test Questions Exam Reliable IT Certifications | Google Professional-Cloud-Architect: Google Certified Professional - Cloud Architect (GCP)

The Professional-Cloud-Architect is an import way to improve our competitiveness, and our Professional-Cloud-Architect exam dump will help you 100% pass your exam and get a certification. First of all, our Professional-Cloud-Architect study materials are constantly being updated and impoved so that you can get the information you need and get a better experience. Our Professional-Cloud-Architect test questions have been following the pace of digitalization, constantly refurbishing, and adding new things. I hope you can feel the Professional-Cloud-Architect Exam Prep sincerely serve customers. We also attach great importance to the opinions of our customers. The duration of this benefit is one year, and Professional-Cloud-Architect exam prep look forward to working with you.

## Google Certified Professional - Cloud Architect (GCP) Sample Questions (Q188-Q193):

### NEW QUESTION # 188

Your company has an application that is running on multiple instances of Compute Engine. It generates 1 TB per day of logs. For compliance reasons, the logs need to be kept for at least two years. The logs need to be available for active query for 30 days. After that, they just need to be retained for audit purposes. You want to implement a storage solution that is compliant, minimizes costs, and follows Google-recommended practices.

What should you do?

- A. 1. Install the Cloud Ops agent on all instances.  
2. Create a sink to export logs into a regional Cloud Storage bucket.  
3. Create an Object Lifecycle rule to move files into a Coldline Cloud Storage bucket after one month.  
4. Configure a retention policy at the bucket level to create a lock.
- B. 1. Write a daily cron job, running on all instances, that uploads logs into a Cloud Storage bucket.  
2. Create a sink to export logs into a regional Cloud Storage bucket.  
3. Create an Object Lifecycle rule to move files into a Coldline Cloud Storage bucket after one month.
- C. 1. Install the Cloud Ops agent on all instances.  
2. Create a sink to export logs into a partitioned BigQuery table.  
3. Set a `time_partitioning_expiration` of 30 days.
- D. 1. Create a daily cron job, running on all instances, that uploads logs into a partitioned BigQuery table. 2. Set a `time_partitioning_expiration` of 30 days.

**Answer: A**

Explanation:

Explanation

The practice for managing logs generated on Compute Engine on Google Cloud is to install the Cloud Logging agent and send them to Cloud Logging.

The sent logs will be aggregated into a Cloud Logging sink and exported to Cloud Storage.

The reason for using Cloud Storage as the destination for the logs is that the requirement in question requires setting up a lifecycle based on the storage period.

In this case, the log will be used for active queries for 30 days after it is saved, but after that, it needs to be stored for a longer period of time for auditing purposes.

If the data is to be used for active queries, we can use BigQuery's Cloud Storage data query feature and move the data past 30 days to Coldline to build a cost-optimal solution.

Therefore, the correct answer is as follows

1. Install the Cloud Logging agent on all instances.

Create a sink that exports the logs to the region's Cloud Storage bucket.

3. Create an Object Lifecycle rule to move the files to the Coldline Cloud Storage bucket after one month.

4. set up a bucket-level retention policy using bucket locking."

### NEW QUESTION # 189

Your architecture calls for the centralized collection of all admin activity and VM system logs within your project.

How should you collect these logs from both VMs and services?

- A. Launch a custom syslogd compute instance and configure your GCP project and VMs to forward all logs to it.
- B. Stackdriver automatically collects admin activity logs for most services. The Stackdriver Logging agent must be installed on each instance to collect system logs.
- C. Install the Stackdriver Logging agent on a single compute instance and let it collect all audit and access logs for your environment.
- D. All admin and VM system logs are automatically collected by Stackdriver.

**Answer: B**

Explanation:

<https://cloud.google.com/logging/docs/agent/default-logs>

### NEW QUESTION # 190

For this question, refer to the EHR Healthcare case study. In the past, configuration errors put public IP addresses on backend servers that should not have been accessible from the Internet. You need to ensure that no one can put external IP addresses on backend Compute Engine instances and that external IP addresses can only be configured on frontend Compute Engine instances.

What should you do?

- A. Create an Identity and Access Management (IAM) policy that maps the IT staff to the compute.networkAdmin role for the organization.
- B. Revoke the compute.networkAdmin role from all users in the project with front end instances.
- C. Create a custom Identity and Access Management (IAM) role named GCE\_FRONTEND with the compute.addresses.create permission.
- **D. Create an Organizational Policy with a constraint to allow external IP addresses only on the frontend Compute Engine instances.**

**Answer: D**

Explanation:

Explanation

### NEW QUESTION # 191

For this question, refer to the Dress4Win case study. You are responsible for the security of data stored in Cloud Storage for your company, Dress4Win. You have already created a set of Google Groups and assigned the appropriate users to those groups. You should use Google best practices and implement the simplest design to meet the requirements. Considering Dress4Win's business and technical requirements, what should you do?

- A. Assign custom IAM roles to the Google Groups you created in order to enforce security requirements. Encrypt data with a customer-supplied encryption key when storing files in Cloud Storage.
- **B. Assign predefined IAM roles to the Google Groups you created in order to enforce security requirements. Ensure that the default Cloud KMS key is set before storing files in Cloud Storage.**
- C. Assign predefined IAM roles to the Google Groups you created in order to enforce security requirements. Utilize Google's default encryption at rest when storing files in Cloud Storage.
- D. Assign custom IAM roles to the Google Groups you created in order to enforce security requirements. Enable default storage encryption before storing files in Cloud Storage.

**Answer: B**

Explanation:

### NEW QUESTION # 192

Your development team has installed a new Linux kernel module on the batch servers in Google Compute Engine (GCE) virtual machines (VMs) to speed up the nightly batch process. Two days after the installation,

50% of web application deployed in the same

nightly batch run. You want to collect details on the failure to pass back to the development team. Which three actions should you take? Choose 3 answers

- **A. Use Stackdriver Logging to search for the module log entries.**
- **B. Use gcloud or Cloud Console to connect to the serial console and observe the logs.**
- C. Read the debug GCE Activity log using the API or Cloud Console.
- D. Export a debug VM into an image, and run the image on a local server where kernel log messages will be displayed on the native screen.
- E. Identify whether a live migration event of the failed server occurred, using in the activity log.
- **F. Adjust the Google Stackdriver timeline to match the failure time, and observe the batch server metrics.**

**Answer: A,B,F**

### NEW QUESTION # 193

.....

Your opportunity to survey the Google Certified Professional - Cloud Architect (GCP) (Professional-Cloud-Architect) exam

questions before buying it will relax your nerves. Exam4Docs proudly declares that it will not disappoint you in providing the best quality Google Certified Professional - Cloud Architect (GCP) (Professional-Cloud-Architect) study material. The guarantee to give you the money back according to terms and conditions is one of the remarkable facilities of the Exam4Docs.
