Our Professional-Cloud-Architect exam questions have three versions: the PDF, Software and APP online. Also, there will have no extra restrictions to your learning because different versions have different merits. All in all, you will not be forced to buy all versions of our Professional-Cloud-Architect Study Materials. You have the final right to select. Please consider our Professional-Cloud-Architect learning quiz carefully and you will get a beautiful future with its help.

If you want to get the Professional-Cloud-Architect certification to improve your life, we can tell you there is no better alternative than our Professional-Cloud-Architect exam questions. The Professional-Cloud-Architect test torrent also offer a variety of learning modes for users to choose from, which can be used for multiple clients of computers and mobile phones to study online, as well as to print and print data for offline consolidation. Our product is affordable and good, if you choose our products, we can promise that our Professional-Cloud-Architect Exam Torrent will not let you down.

Pass Guaranteed 2025 Google Professional-Cloud-Architect –High Pass-Rate Latest Test Sample

In this social-cultural environment, the Professional-Cloud-Architect certificates mean a lot especially for exam candidates like you. To some extent, these Professional-Cloud-Architect certificates may determine your future. With respect to your worries about the practice exam, we recommend our Professional-Cloud-Architect Preparation materials which have a strong bearing on the outcomes dramatically. For a better understanding of their features, please follow our website and try on them.

Google Certified Professional - Cloud Architect (GCP) Sample Questions (Q196-Q201):

NEW QUESTION # 196

Your company captures all web traffic data in Google Analytics 260 and stores it in BigQuery.

Each country has its own dataset. Each dataset has multiple tables. You want analysts from each country to be able to see and query only the data for their respective countries.

How should you configure the access rights?

- A. Create a group per country. Add analysts to their respective country-groups. Create a single group 'all_analysts', and add all country-groups as members. Grant the 'all-analysis' group the IAM role of BigQuery jobUser. Share the appropriate tables with view access with each respective analyst country- group.
- B. Create a group per country. Add analysts to their respective country-groups. Create a single group 'all_analysts', and add all country-groups as members. Grant the 'all-analysis' group the IAM role of BigQuery dataViewer. Share the appropriate dataset with view access with each respective analyst country-group.
- C. Create a group per country. Add analysts to their respective country-groups. Create a single group 'all_analysts', and add

all country-groups as members. Grant the 'all-analysis' group the IAM role of BigQuery dataViewer. Share the appropriate table with view access with each respective analyst country-group.

- D. Create a group per country. Add analysts to their respective country-groups. Create a single group 'all_analysts', and add all country-groups as members. Grant the 'all-analysis' group the IAM role of BigQuery jobUser. Share the appropriate dataset with view access with each respective analyst country-group.

Answer: D

NEW QUESTION # 197

The operations manager asks you for a list of recommended practices that she should consider when migrating a J2EE application to the cloud. Which three practices should you recommend? Choose 3 answers

- A. Deploy a continuous integration tool with automated testing in a staging environment.
- B. Migrate from MySQL to a managed NoSQL database like Google Cloud Datastore or Bigtable.
- C. Instrument the application with a monitoring tool like Stackdriver Debugger.
- D. Port the application code to run on Google App Engine.
- E. Integrate Cloud Dataflow into the application to capture real-time metrics.
- F. Select an automation framework to reliably provision the cloud infrastructure.

Answer: A,C,F

NEW QUESTION # 198

You are moving an application that uses MySQL from on-premises to Google Cloud. The application will run on Compute Engine and will use Cloud SQL. You want to cut over to the Compute Engine deployment of the application with minimal downtime and no data loss to your customers. You want to migrate the application with minimal modification. You also need to determine the cutover strategy. What should you do?

- A. 1. Stop the on-premises application.
2. Create a mysqldump of the on-premises MySQL server.
3. Upload the dump to a Cloud Storage bucket.
4. Import the dump into Cloud SQL.
5. Start the application on Compute Engine.
- B. 1. Set up Cloud SQL proxy and MySQL proxy.
2. Create a mysqldump of the on-premises MySQL server.
3. Upload the dump to a Cloud Storage bucket.
4. Import the dump into Cloud SQL.
5. Stop the on-premises application.
6. Start the Compute Engine application.
- C. 1. Set up Cloud VPN to provide private network connectivity between the Compute Engine application and the on-premises MySQL server.
2. Stop the on-premises application.
3. Create a mysqldump of the on-premises MySQL server.
4. Upload the dump to a Cloud Storage bucket.
5. Import the dump into Cloud SQL.
6. Modify the source code of the application to write queries to both databases and read from its local database.
7. Start the Compute Engine application.
8. Stop the on-premises application.
- D. 1. Set up Cloud VPN to provide private network connectivity between the Compute Engine application and the on-premises MySQL server.
2. Stop the on-premises application.
3. Start the Compute Engine application, configured to read and write to the on-premises MySQL server.
4. Create the replication configuration in Cloud SQL.
5. Configure the source database server to accept connections from the Cloud SQL replica.
6. Finalize the Cloud SQL replica configuration.
7. When replication has been completed, stop the Compute Engine application.
8. Promote the Cloud SQL replica to a standalone instance.
9. Restart the Compute Engine application, configured to read and write to the Cloud SQL standalone instance.

Answer: D

Explanation:

External replica promotion migration In the migration strategy of external replica promotion, you create an external database replica and synchronize the existing data to that replica. This can happen with minimal downtime to the existing database. When you have a replica database, the two databases have different roles that are referred to in this document as primary and replica. After the data is synchronized, you promote the replica to be the primary in order to move the management layer with minimal impact to database uptime. In Cloud SQL, an easy way to accomplish the external replica promotion is to use the automated migration workflow. This process automates many of the steps that are needed for this type of migration.

<https://cloud.google.com/architecture/migrating-mysql-to-cloudsql-concept>

- The best option for migrating your MySQL database is to use an external replica promotion. In this strategy, you create a replica database and set your existing database as the primary. You wait until the two databases are in sync, and you then promote your MySQL replica database to be the primary. This process minimizes database downtime related to the database migration. -

NEW QUESTION # 199

A production database virtual machine on Google Compute Engine has an ext4-formatted persistent disk for data files. The database is about to run out of storage space. How can you remediate the problem with the least amount of downtime?

- A. In the Cloud Platform Console, increase the size of the persistent disk and verify the new space is ready to use with the `fdisk` command in Linux.
- **B. In the Cloud Platform Console, increase the size of the persistent disk and use the `resize2fs` command in Linux.**
- C. Shut down the virtual machine, use the Cloud Platform Console to increase the persistent disk size, then restart the virtual machine.
- D. In the Cloud Platform Console, create a snapshot of the persistent disk, restore the snapshot to a new larger disk, unmount the old disk, mount the new disk, and restart the database service.
- E. In the Cloud Platform Console, create a new persistent disk attached to the virtual machine, format and mount it, and configure the database service to move the files to the new disk.

Answer: B

Explanation:

On Linux instances, connect to your instance and manually resize your partitions and file systems to use the additional disk space that you added.

Extend the file system on the disk or the partition to use the added space. If you grew a partition on your disk, specify the partition.

If your disk does not have a partition table, specify only the disk ID.

```
sudo resize2fs /dev/[DISK_ID][PARTITION_NUMBER]
```

where [DISK_ID] is the device name and [PARTITION_NUMBER] is the partition number for the device where you are resizing the file system.

References: <https://cloud.google.com/compute/docs/disks/add-persistent-disk>

NEW QUESTION # 200

Auditors visit your teams every 12 months and ask to review all the Google Cloud Identity and Access Management (Cloud IAM) policy changes in the previous 12 months. You want to streamline and expedite the analysis and audit process. What should you do?

- A. Create custom Google Stackdriver alerts and send them to the auditor.
- B. Enable Google Cloud Storage (GCS) log export to audit logs into a GCS bucket and delegate access to the bucket.
- **C. Enable Logging export to Google BigQuery and use ACLs and views to scope the data shared with the auditor.**
- D. Use cloud functions to transfer log entries to Google Cloud SQL and use ACLs and views to limit an auditor's view.

Answer: C

NEW QUESTION # 201

.....

Success in the Google Professional-Cloud-Architect exam is impossible without proper Professional-Cloud-Architect exam preparation. I would recommend you select LatestCram for your Professional-Cloud-Architect certification test preparation.

LatestCram offers updated Google Professional-Cloud-Architect PDF Questions and practice tests. This Professional-Cloud-Architect practice test material is a great help to you to prepare better for the final Google Professional-Cloud-Architect exam. LatestCram latest Professional-Cloud-Architect exam dumps are one of the most effective Google Professional-Cloud-Architect Exam Preparation methods. These valid Google Professional-Cloud-Architect exam dumps help you achieve better Professional-Cloud-Architect exam results. World's highly qualified professionals provide their best knowledge to LatestCram and create this Google Professional-Cloud-Architect practice test material. Candidates can save time because Professional-Cloud-Architect valid dumps help them to prepare better for the Google Professional-Cloud-Architect test in a short time.
