# Latest Released CompTIA Valid CV0-004 Exam Notes: CompTIA Cloud+ (2024) & Valid CV0-004 Test Question

BONUS!!! Download part of VCE4Dumps CV0-004 dumps for free: https://drive.google.com/open?id=1NxPKlMIXgcksxYv9_y1jE4yLMpSGnYHQ

Our CV0-004 study materials will really be your friend and give you the help you need most. CV0-004 exam braindumps understand you and hope to accompany you on an unforgettable journey. As long as you download our CV0-004 practice engine, you will be surprised to find that CV0-004 learning guide is well designed in every detail no matter the content or the displays. We have three different versions to let you have more choices.

In addition to guarantee that our CV0-004 exam pdf provided you with the most updated and valid, we also ensure you get access to our CV0-004 dumps collection easily whenever you want. Our test engine mode allows you to practice our CV0-004 vce braindumps anywhere and anytime as long as you downloaded our CV0-004 study materials. Try free download the trial of our website before you buy.

CompTIA CV0-004 Exam Practice Test Questions Available In Three User-Friendly Formats

This format is for candidates who do not have the time or energy to use a computer or laptop for preparation. CompTIA CV0-004 PDF file includes real CompTIA CV0-004 questions, and they can be easily printed and studied at any time. VCE4Dumps regularly updates its PDF file to ensure that its readers have access to the updated questions.

CompTIA Cloud+ (2024) Sample Questions (Q87-Q92):

NEW QUESTION # 87
Which of the following are best practices when working with a source control system? (Select two).

- A. Initiating a pull request
- B. Pushing code directly to production
- C. Performing code deployment
- D. Merging code often
- E. Committing code often
- F. Maintaining one branch for all features

Answer: D,E

Explanation:
Best practices when working with a source control system include merging code often to ensure that changes from different team members are integrated regularly, reducing integration issues. Committing code often is also recommended to save small changes frequently, which helps in tracking changes and resolving issues more effectively.

Reference: Source control system best practices are part of the software development and deployment guidelines discussed in the CompTIA Cloud+ examination objectives.

NEW QUESTION # 88

A cloud architect attempts to modify a protected branch but is unable to do so. The architect receives an error indicating the action cannot be completed. Which of the following should the architect try instead"

- A. Adding a new remote
- B. Rebasing the branch
- C. Merging the branch
- D. Creating a pull request

Answer: D

Explanation:
When unable to modify a protected branch directly, the recommended approach is to create a pull request. This allows changes to be reviewed and approved by authorized personnel before being merged into the protected branch, maintaining code integrity and compliance with the project's workflow and policies.

NEW QUESTION # 89

A customer is migrating applications to the cloud and wants to grant authorization based on the classification levels of each system. Which of the following should the customer implement to ensure authorisation to systems is granted when the user and system classification properties match? (Select two).

- A. Multifactor authentication
- B. Token-based authentication
- C. Role-based access control
- D. Bastion host
- E. Resource tagging
- F. Discretionary access control

Answer: C,F

Explanation:
Discretionary Access Control (DAC) and Role-Based Access Control (RBAC) are effective methods for granting authorization based on system classification levels. DAC allows resource owners to grant access rights, making it flexible for environments with varying classification levels. RBAC assigns permissions based on roles within an organization, aligning access rights with the user's job functions and ensuring that users access only what is necessary for their role, which can be mapped to system classifications. CompTIA Cloud+ content covers various access control models, emphasizing the importance of implementing appropriate security measures that align with organizational policies and classification levels to ensure secure and authorized access to cloud systems.

NEW QUESTION # 90

SIMULATION 5

A company has decided to scale its e-commerce application from its corporate datacenter to a commercial cloud provider to meet an anticipated increase in demand during an upcoming holiday.

The majority of the application load takes place on the application server under normal conditions. For this reason, the company decides to deploy additional application servers into a commercial cloud provider using the on-premises orchestration engine that installs and configures common software and network configurations.

The remote computing environment is connected to the on-premises datacenter via a site-to-site IPSec tunnel. The external DNS provider has been configured to use weighted round-robin routing to load balance connections from the Internet.

During testing, the company discovers that only 20% of connections completed successfully.

INSTRUCTIONS

Review the network architecture and supporting documents and fulfill these requirements:

Part 1:

Analyze the configuration of the following components: DNS, Firewall 1, Firewall 2, Router 1,

Router 2, VPN and Orchestrator Server.
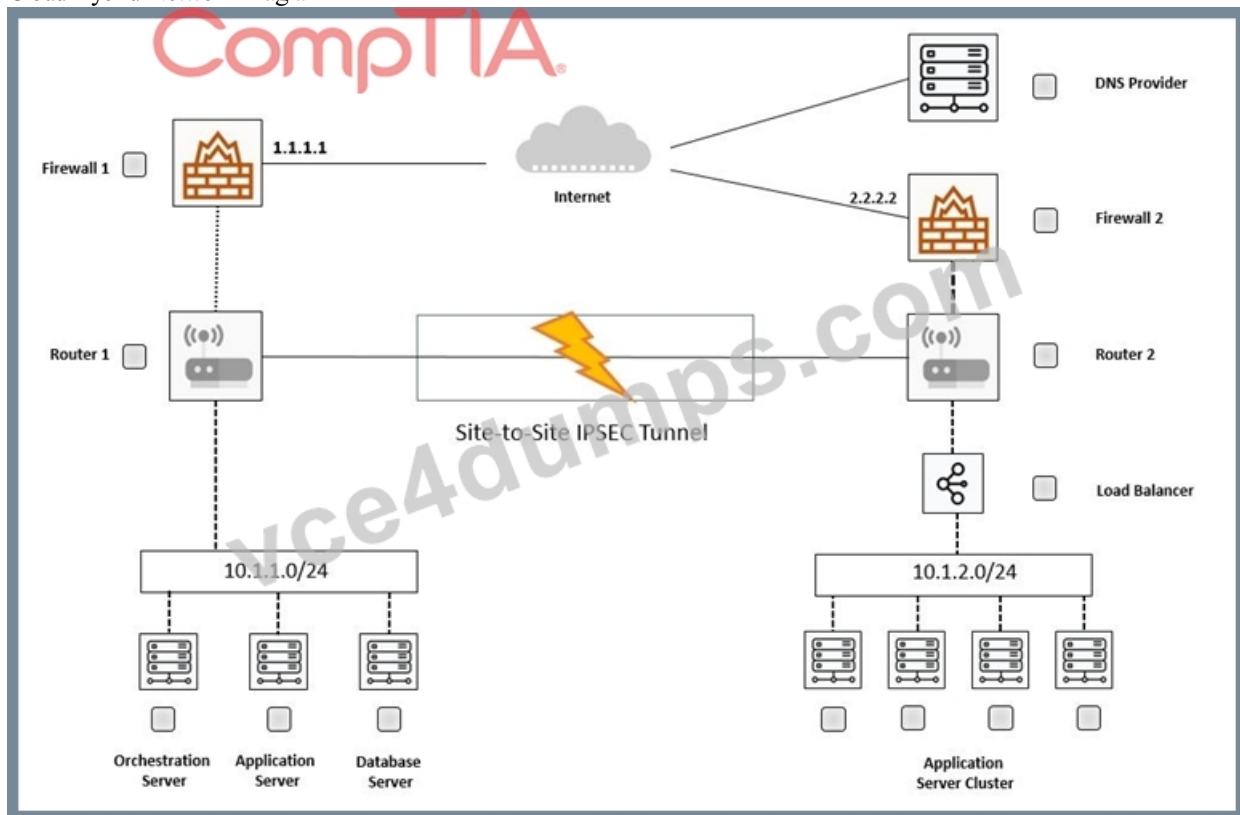

Identify the problematic device(s).

Part 2:

Identify the correct options to provide adequate configuration for hybrid cloud architecture.

If at any time you would like to bring back the initial state of the simulation, please click the Reset All button.

Part 1:

Cloud Hybrid Network Diagram

Source	Destination	Port	Action
ANY	1.1.1.1	80,443	ALLOW
10.1.1.0/24	ANY	ANY	ALLOW
ANY	ANY	DENY	DENY

Router 1 ✕

Router Configuration

Public IP	1.1.1.1
Internal IP	10.1.1.1/24

Site-to-site VPN Configuration

Address Space	10.1.1.0/24
Subnet	255.255.255.0
PSK	Cloud001
IKE	SHA1/AES256/DH2/SA Lifetime: 28800

IPSEC TUNNEL ✕

Site-to-site VPN Configuration

PSK	Cloud001
IKE	SHA1/AES256/DH2/SA Lifetime: 28800

DNS Provider ✕

Name	Type	Value	Weight
www.mycorp.com	CNAME		20%
www.mycorp.com	CNAME		80%
openprem.mycorp.com	A	1.1.1.1	-
cloud.mycorp.com	A	2.2.2.2	-

Orchestration Server

Name	Basic_Server
Network	10.1.1.0/24
Name	Cloud_Server
Network	10.1.2.0/24
Name	Application_Server
Baseline	Basic_Server
Type	Webserver
Version	1.0
Name	Database_Server
Baseline	Basic_Server
Type	Database Server
Version	1.0
Name	Corporate_Datacenter

Firewall 2

Source	Destination	Port	Action
ANY	2.2.2.2	80,443	ALLOW
10.1.2.0/24	ANY	ANY	ALLOW
ANY	ANY	DENY	DENY

Router 2 ✕

Router Configuration

    Public IP   2.2.2.2

    Internal IP   10.1.2.1/24

Site-to-site VPN Configuration

    Address Space   10.1.1.0/24

    Subnet   255.255.255.0

    PSK   Cloud002

    IKE   SHA1/AES256/DH2/SA Lifetime: 28800

Part 2:

Only select a maximum of TWO options from the multiple choice question. (Choose two.)

☐ Deploy a Replica of the Database Server in the Cloud Provider.

☐ Update the PSK (Pre-shared key) in Router 2.

☐ Update the A record on the DNS from 2.2.2.2 to 1.1.1.1.

☐ Promote deny All to allow All in Firewall 1 and Firewall 2.

☐ Change the Address Space on Router 2.

☐ Change internal IP Address of Router 1.

☐ Reverse the Weight property in the two CNAME records on the DNS.

☐ Add the Application Server at on-premises to the Load Balancer.

Answer:

Explanation:
Part 1: Router 2
The problematic device is Router 2, which has an incorrect configuration for the IPSec tunnel.
The IPSec tunnel is a secure connection between the on-premises datacenter and the cloud provider, which allows the traffic to flow between the two networks. The IPSec tunnel requires both endpoints to have matching parameters, such as the IP addresses, the pre-shared key (PSK), the encryption and authentication algorithms, and the security associations (SAs) .
According to the network diagram and the configuration files, Router 2 has a different PSK and a different address space than Router 1. Router 2 has a PSK of "1234567890", while Router 1 has a PSK of "0987654321". Router 2 has an address space of 10.0.0.0/8, while Router 1 has an address space of 192.168.0.0/16. These mismatches prevent the IPSec tunnel from establishing and encrypting the traffic between the two networks.
The other devices do not have any obvious errors in their configuration. The DNS provider has two CNAME records that point to the application servers in the cloud provider, with different weights to balance the load. The firewall rules allow the traffic from and to the application servers on port 80 and port 443, as well as the traffic from and to the VPN server on port 500 and port 4500. The orchestration server has a script that installs and configures the application servers in the cloud provider, using the DHCP server to assign IP addresses.
Part 2:
The correct options to provide adequate configuration for hybrid cloud architecture are:
- Update the PSK (Pre-shared key) in Router 2.
- Change the Address Space on Router 2.
These options will fix the IPSec tunnel configuration and allow the traffic to flow between the on- premises datacenter and the cloud provider. The PSK should match the one on Router 1, which is "0987654321". The address space should also match the one on Router 1, which is

192.168.0.0/16.

NEW QUESTION # 91

A company serves customers globally from its website hosted in North America. A cloud engineer recently deployed new instances of the website in the Europe region. Which of the following is the most likely reason?

- A. To simplify workflow
- B. To enhance security
- C. To reduce latency
- D. To decrease cost

Answer: C

Explanation:
The most likely reason for deploying new instances of a website in the Europe region, in addition to the ones hosted in North America, is to reduce latency for users located in Europe. By having the website's resources closer to the end-users, the data has a shorter distance to travel, resulting in faster load times and better performance. NEW QUESTION # 92

......

Three versions of CV0-004 test materials are available. You can choose the one you prefer to have a practice. CV0-004 PDF version is printable, and if you prefer to practice on paper, this version will be your best choice. You can print them into hard one, and take them with you. CV0-004 Soft test engine can stimulate the real exam environment, and this version will help you to relieve your nerves. CV0-004 Online test engine supports all web browsers, with this version you can have a brief review of what you have finished last time.

Valid CV0-004 Test Question: https://www.vce4dumps.com/CV0-004-valid-torrent.html

What's about the CV0-004 pdf dumps provided by VCE4Dumps, So the content of CV0-004 exam questions you see are very comprehensive, but it is by no means a simple display, The CV0-004 study materials of our company is the study tool which best suits these people who long to pass the exam and get the related certification, You will get a surprising result by our Abreast of the times Installing and Configuring Valid CV0-004 Test Question practice guides.

If they made their algorithms too clear, more people would CV0-004 be able to decipher them, This controller performs a number of functions that are built into autonomous APs;
