You can imagine that you just need to pay a little money for our Analytics-Arch-201 exam prep, what you acquire is priceless. So it equals that you have made a worthwhile investment. Firstly, you will learn many useful knowledge and skills from our Analytics-Arch-201 Exam Guide, which is a valuable asset in your life. After all, no one can steal your knowledge. In addition, you can get the valuable Analytics-Arch-201 certificate.

Salesforce Analytics-Arch-201 Exam Syllabus Topics:

Topic	Details
Topic 1	• Deploy Tableau Server: This domain assesses the ability of Tableau Administrators to perform production-ready deployments of Tableau Server. It encompasses installing and configuring Tableau Server with external components, supporting air-gapped environments, disaster recovery validations, and blue-green deployments. It includes configuring and troubleshooting various authentication methods such as SAML, Kerberos, and LDAP. The section also covers implementing encryption strategies, installing and verifying Tableau Server on Linux and Windows platforms, resolving installation and configuration issues, and managing service accounts and logging.
Topic 2	• Design a Tableau Infrastructure: This section of the exam measures skills of Tableau Consultants and focuses on planning and designing a complex Tableau deployment. It covers gathering user requirements, licensing strategies including Authorization-to-Run, high availability and disaster recovery planning, and mapping server add-ons to the organization's needs. It includes planning and implementing Tableau Cloud with Bridge, authentication, user provisioning, and multi-site configuration. Additionally, it addresses migration planning across Tableau products, operating systems, identity stores, and consolidations, as well as designing process topologies, sizing, node roles, and recommending server configurations including security, hardware, and disaster recovery.
Topic 3	• Monitor and Maintain a Tableau Deployment: This section evaluates skills of Tableau Administrators in monitoring, maintaining, and optimizing Tableau environments. It involves creating custom administrative dashboards, conducting load testing using tools like TabJolt, and analyzing test results. Troubleshooting complex performance bottlenecks in workbooks and server resources is key, as is tuning caching and scaling strategies. It covers leveraging observability tools such as the Resource Monitoring Tool, analyzing logs and metrics, and adjusting architecture accordingly. Automation of maintenance functions using APIs, scripting, and scheduling is included, along with managing server extensions, content automation, dashboard extensions, web data connectors, and secure embedded solutions.

100% Pass Salesforce - Analytics-Arch-201 - Salesforce Certified Tableau Architect Newest Reliable Exam Pattern

To keep with such an era, when new knowledge is emerging, you need to pursue latest news and grasp the direction of entire development tendency, our Analytics-Arch-201 training questions have been constantly improving our performance and updating the exam bank to meet the conditional changes. Our working staff regards checking update of our Analytics-Arch-201 Preparation exam as a daily routine. So without doubt, our Analytics-Arch-201 exam questions are always the latest and valid.

Salesforce Certified Tableau Architect Sample Questions (Q60-Q65):

NEW QUESTION # 60

In developing a load testing strategy for Tableau Server, what aspect is important to include to ensure comprehensive testing?

- A. Simulating a variety of user activities, such as viewing dashboards, publishing workbooks, and refreshing extracts
- B. Running the tests only with administrative users to evaluate the server's response to privileged activities
- C. Testing the server with a single, high-usage dashboard to see its performance under stress
- D. Exclusively testing the data source connection speeds to determine the overall server performance

Answer: A

Explanation:

Simulating a variety of user activities, such as viewing dashboards, publishing workbooks, and refreshing extracts A comprehensive load testing strategy for Tableau Server should include simulating a variety of user activities. This includes tasks like viewing dashboards, publishing workbooks, and refreshing extracts. This approach ensures a thorough evaluation of the server's performance across different types of demands and user interactions, providing a more realistic assessment of its capabilities and limitations. Option A is incorrect because testing with only a single dashboard does not account for the varied activities users perform on the server. Option C is incorrect as focusing solely on data source connection speeds neglects other crucial aspects of server performance. Option D is incorrect because running tests only with administrative users does not replicate the typical activities of regular users, which are essential for understanding the server's performance under normal operating conditions.

NEW QUESTION # 61

In a scenario where you need to change the 'Run As' service account for Tableau Server on a Windows system, what is a crucial step to ensure a smooth transition?

- A. Disabling the firewall settings on the Windows system during the account transition
- B. Temporarily granting the new 'Run As' account administrative privileges on the entire net-work
- C. Changing the password of the new 'Run As' account to match the old account
- D. Ensuring the new 'Run As' account has the correct permissions on the Tableau Server di-rectories and registry keys

Answer: D

Explanation:

Ensuring the new 'Run As' account has the correct permissions on the Tableau Server directories and registry keys When changing the 'Run As' service account for Tableau Server, it's crucial to ensure that the new account has the correct permissions on the Tableau Server directories and registry keys. This step is necessary to allow the new account to access and manage the server's files and settings effectively. Option A is incorrect because granting administrative privileges on the entire network is excessive and poses a security risk. Option C is incorrect as matching the passwords of the old and new accounts is not relevant to ensuring the correct permissions are set. Option D is incorrect because disabling firewall settings is not related to changing the 'Run As' service account and can compromise system security.

NEW QUESTION # 62

When implementing extract encryption in Tableau Server, what is a crucial step to secure the data extracts stored on the server?

- A. Increasing the storage capacity of the server to accommodate the additional space required by encrypted extracts
- B. Configuring a VPN tunnel for all data extract transfers to and from Tableau Server
- C. Enabling at-rest encryption for data extracts within Tableau Server's configuration settings
- D. Implementing a network intrusion detection system to monitor extract file accesses

Answer: C

Explanation:

Enabling at-rest encryption for data extracts within Tableau Server's configuration settings Enabling at-rest encryption for data extracts within Tableau Server's configuration is essential for securing the data extracts stored on the server. This feature encrypts the extract files stored on the server, protecting sensitive data from unauthorized access, especially if the server's storage is compromised. Option A is incorrect as configuring a VPN tunnel addresses data in transit, not data at rest like extracts stored on the server. Option C is incorrect because a network intrusion detection system, while important for overall security, does not directly encrypt data extracts. Option D is incorrect as increasing storage capacity does not directly contribute to the encryption or security of data extracts.

NEW QUESTION # 63

In preparing for the migration from Tableau Cloud to Tableau Server, what should be the primary focus to minimize disruptions to business operations?

- A. Migrating the largest datasets first to quickly free up space on Tableau Cloud
- B. Completing the migration in the shortest possible time, regardless of planning
- C. Focusing solely on hardware requirements for Tableau Server without considering data and dashboard migration strategies
- **D. Developing a detailed migration plan that includes phased rollouts and testing**

Answer: D

Explanation:

Developing a detailed migration plan that includes phased rollouts and testing A detailed migration plan with phased rollouts and testing ensures a smooth transition with minimal disruptions to business operations, allowing for addressing potential issues in stages. Option A is incorrect because rushing the migration without adequate planning can lead to significant disruptions and data loss. Option C is incorrect as migrating the largest datasets first may not align with business priorities and could lead to operational challenges. Option D is incorrect because while hardware is important, focusing solely on it neglects critical aspects of data and dashboard migration.

NEW QUESTION # 64

In the context of SSL encryption for Tableau Server, what is an important consideration when renewing an SSL certificate?

- **A. Ensuring that the new SSL certificate is renewed and installed before the expiration of the current certificate**
- B. Switching to a different SSL protocol version during renewal for enhanced security
- C. Renewing the certificate with the exact same specifications as the old one to avoid configuration changes
- D. Temporarily disabling SSL encryption while waiting for the new certificate to be issued

Answer: A

Explanation:

Ensuring that the new SSL certificate is renewed and installed before the expiration of the current certificate When renewing an SSL certificate for Tableau Server, it is important to ensure that the new certificate is renewed and installed before the current one expires. This continuity prevents any interruptions in SSL encryption and maintains secure communications without any downtime or security warnings due to an expired certificate. Option A is incorrect because the new certificate does not necessarily need to have the exact same specifications; updates or changes might be beneficial. Option C is incorrect as switching SSL protocol versions during renewal should be done based on security needs and compatibility, not as a routine process. Option D is incorrect because disabling SSL encryption, even temporarily, can expose the server to security risks.
