Pass Guaranteed High Hit-Rate SAP - Latest C-S43-2022 Exam Materials

PracticeTorrent knows the importance of the SAP C-S43-2022 certification exam in the field of information technology. That is why it has prepared the remarkable SAP C-S43-2022 exam questions to help the aspirants pass it on the first go. The desiring candidates for the SAP C-S43-2022 certificate need help to find reliable C-S43-2022 Exam Questions study material.

SAP Certified Application Associate - SAP S/4HANA Asset Management Sample Questions (Q72-Q77):

NEW QUESTION # 72

The maintenance engineer creates a strategy plan with the call object maintenance order. Shift factors are set to 100% which date is relevant for the calculation of future planned dates if the maintenance work is delayed?

- A. Planned date of the next call, independent of maintenance order dates
- B. Technical completion date of the maintenance order
- C. The date of the final confirmation
- D. Actual finish date of the maintenance order

Answer: D

Explanation:

Explanation

A strategy plan is a type of maintenance plan that defines different maintenance packages with different intervals for the same technical object. The system calculates the due dates for the maintenance packages based on the maintenance strategy assigned to the plan. The maintenance strategy contains the cycles and the shift factors for each package. The shift factors determine how the system shifts the planned dates of the next maintenance call when the maintenance work is delayed or performed earlier than planned. If the shift factor is

100%, the system shifts the planned date by the same number of days as the delay or the advance. If the shift factor is 0%, the system does not shift the planned date at all. The call object of a maintenance plan is the object that the system generates when a maintenance call is due. The call object can be a maintenance order, a maintenance notification, a service entry sheet, or a purchase requisition. If the call object is a maintenance order, the system uses the actual finish date of the maintenance order to calculate the future planned dates for the maintenance packages. The actual finish date is the date when the maintenance work is completed and confirmed. The planned date of the next call, the date of the final confirmation, and the technical completion date of the maintenance order are not relevant for the calculation of future planned dates if the maintenance work is delayed. NEW QUESTION # 73

What are mandatory characteristics of orders with Operation Account Assignment (OAA)? Note: There are 3 correct answers to this question

- A. A technical object must be assigned to an order operation
- B. Purchase requisitions have the operation as account assignment.
- C. Overall costs are dynamically summed up on the header level.
- D. The settlement rule is maintained on the header level.
- E. Costs are stored only for the operation object

Answer: A,C,E

NEW QUESTION # 74

You want to display additional document information within the document flow of a maintenance order. For which type of document must this be customized?

- A. Service entry sheet
- B. Purchase order
- C. Goods movement
- D. Invoice

Answer: C

NEW QUESTION # 75

You want to set up a scenario for regular maintenance. The first event should take place after 1 year, after that, it is a regular cycle of

6 months. Which parameter do you have to use to map this in the system?

- A. Package hierarchy
- B. Cycle modification factor
- **C. Maintenance package offset**
- D. Scheduling indicator

Answer: C

Explanation:

To set up a scenario for regular maintenance, the first event should take place after 1 year, and after that, it is a regular cycle of 6 months, you have to use the maintenance package offset parameter to map this in the system. The maintenance package offset is used to define the time interval between the start of the maintenance plan and the first call date of the maintenance package¹. A maintenance package is a set of data that defines the frequency and scope of the maintenance tasks².

For example, if you want to create a maintenance plan with two maintenance packages, one for annual inspection and one for semi-annual inspection, you can use the following settings:

Maintenance package 1: Cycle length = 12 months, Offset = 0 months, Scheduling indicator = Time-based
Maintenance package 2: Cycle length = 6 months, Offset = 12 months, Scheduling indicator = Time-based
This means that the first maintenance package will be called at the start of the maintenance plan, and then every 12 months thereafter. The second maintenance package will be called after 12 months from the start of the maintenance plan, and then every 6 months thereafter.

The other parameters that are not relevant for this scenario are:

Package hierarchy: This is used to define the relationship between different maintenance packages within a maintenance plan. It allows you to create nested or parallel maintenance packages that are dependent on each other³.

Scheduling indicator: This is used to define the type of scheduling for the maintenance package, such as time-based, performance-based, or condition-based⁴.

Cycle modification factor: This is used to modify the cycle length of the maintenance package by a certain percentage or factor⁵.

NEW QUESTION # 76

To which objects can a personnel number be directly assigned? Note: There are 2 correct answers to this question?

- **A. Work center**
- **B. Business partner**
- C. Planner group
- D. Maintenance plan

Answer: A,B

Explanation:

A personnel number is a unique identifier for an employee in the SAP system. A personnel number can be directly assigned to the following objects:

C . Work center. A work center is a location where maintenance activities are performed. A work center can have one or more personnel numbers assigned to it, which represent the employees who work at that location. The personnel numbers can be used for capacity planning, scheduling, and confirmation of maintenance orders¹.

D . Business partner. A business partner is a person or an organization that has a business relationship with the company. A business partner can have one or more roles, such as customer, vendor, or contact person. A personnel number can be assigned to a business partner role, which allows the system to identify the employee who is responsible for the business partner or who acts as a contact person for the business partner².

A personnel number cannot be directly assigned to the following objects:

A . Planner group. A planner group is a group of employees who are responsible for planning and processing maintenance orders. A planner group is assigned to a maintenance order header, but not to a personnel number. A planner group can have one or more work centers assigned to it, which in turn can have personnel numbers assigned to them³.

B . Maintenance plan. A maintenance plan is a document that defines the frequency and scope of preventive maintenance activities for technical objects. A maintenance plan is assigned to a maintenance item, which contains the technical object and the task list for the maintenance activities. A maintenance plan does not have a direct assignment to a personnel number, but it can have a planner group assigned to it, which can have work centers and personnel numbers assigned to it.
