

Latest SAP C_BW4H_2505 Practice Materials & C_BW4H_2505 VCE Exam Simulator

P.S. Free 2025 SAP C_BW4H_2505 dumps are available on Google Drive shared by Real4dumps: <https://drive.google.com/open?id=1LW1sm-2cPSWErE7QDfzY8KR4xLbGBK7v>

You may feel astonished and doubtful about this figure; but we do make our C_BW4H_2505 exam dumps well received by most customers. Better still, the 98-99% pass rate has helped most of the candidates get the certification successfully, which is far beyond that of others in this field. In recent years, supported by our professional expert team, our C_BW4H_2505 Test Braindumps have grown up and have made huge progress. We pay emphasis on variety of situations and adopt corresponding methods to deal with. More successful cases of passing the C_BW4H_2505 exam can be found and can prove our powerful strength.

SAP C_BW4H_2505 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none">• SAP BW• 4HANA Modeling: This section targets the skills of Data Engineers in selecting appropriate modeling options and applying best practices like LSA++ within SAP BW• 4HANA. It focuses on designing scalable, high-performing data models.
Topic 2	<ul style="list-style-type: none">• SAP Analytics Tools and SAP Analytics Cloud: This section evaluates the skills of SAP Consultants in using tools like SAP Analytics Cloud, Lumira, and Analysis for Office to visualize and interpret data. It focuses on the consultant's ability to apply business intelligence tools within the SAP ecosystem.
Topic 3	<ul style="list-style-type: none">• Native SAP HANA Modeling: This section evaluates the ability of SAP Consultants to describe and apply native modeling options in SAP HANA. It emphasizes understanding how to build optimized data structures directly within the HANA platform.
Topic 4	<ul style="list-style-type: none">• Data Acquisition into SAP BW• 4HANA: This section tests how Data Engineers manage data integration into SAP BW• 4HANA from multiple sources. It covers essential knowledge of tools and processes used for data extraction, transformation, and loading into the SAP environment.

Topic 5	<ul style="list-style-type: none"> • SAP BW • 4HANA Project and the Modeling Process: This section of the exam assesses how Data Engineers guide and contribute to SAP BW • 4HANA projects. It includes knowledge of modeling workflows, project lifecycle stages, and collaboration strategies within project teams.

C_BW4H_2505 VCE Exam Simulator, C_BW4H_2505 Exam Reference

We aim to provide the best service on C_BW4H_2505 exam questions for our customers, and we demand of ourselves and our after sale service staffs to the highest ethical standard, though our C_BW4H_2505 study guide and compiling processes have been of the highest quality. We are deeply committed to meeting the needs of our customers, and we constantly focus on customer's satisfaction. We play an active role in making every customer in which we selling our C_BW4H_2505 practice dumps a better place to live and work.

SAP Certified Associate - Data Engineer - SAP BW/4HANA Sample Questions (Q77-Q82):

NEW QUESTION # 77

Which tasks are part of the Business Blueprint phase in an SAP BW/4HANA project? Note: There are 2 correct answers to this question.

- A. Associate an InfoObject to a field in an Open ODS view
- B. Activate SAP business content objects that comply with the layered scalable architecture (LSA++) architecture
- C. Analyze key performance indicators of the business processes
- D. Collect central individual information requirements

Answer: C,D

NEW QUESTION # 78

You use InfoObject B as a display attribute for InfoObject A.

Which object properties prevent you from changing InfoObject B into a navigational attribute for InfoObject A? Note: There are 3 correct answers to this question.

- A. Data Type "Character String" is set in InfoObject A.
- B. Conversion Routine "ALPHA" is set in InfoObject A.
- C. InfoObject B is defined as a Key Figure.
- D. Attribute Only is set in InfoObject B.
- E. High Cardinality is set in InfoObject B.

Answer: C,D,E

Explanation:

In SAP BW/4HANA, when using InfoObjects and their attributes, certain properties of the objects can restrict or prevent specific configurations. Let's analyze each option to determine why B, C, and D are correct:

* Explanation: If an InfoObject is flagged as "Attribute Only," it means that this object is designed exclusively to serve as an attribute for another InfoObject. Such objects cannot be used as navigational attributes because navigational attributes require additional functionality, such as being part of reporting and navigation paths.

* In SAP BW/4HANA, the "Attribute Only" property is a restriction that prevents an InfoObject from being used in ways other than as a display attribute. This ensures that the object remains lightweight and focused on its intended purpose.

2. High Cardinality is set in InfoObject B (Option C) Explanation: High cardinality indicates that the InfoObject has a large number of unique values relative to the dataset size. Navigational attributes typically require efficient indexing and aggregation, which becomes challenging with high-cardinality fields.

Therefore, SAP BW/4HANA does not allow high-cardinality attributes to be used as navigational attributes.

Reference: High-cardinality attributes are better suited for use cases like drill-downs or detailed analysis rather than navigation. The system enforces this restriction to optimize performance and avoid excessive memory consumption.

3. InfoObject B is defined as a Key Figure (Option D) Explanation: Key Figures are numeric measures (e.

g., sales amount, quantity) and are fundamentally different from characteristics (descriptive attributes). Since navigational attributes must be characteristics, an InfoObject defined as a Key Figure cannot be converted into a navigational attribute.

Reference: In SAP BW/4HANA, Key Figures and Characteristics serve distinct roles in data modeling. Key Figures are used for calculations and aggregations, while Characteristics provide context and descriptive information.

4. Data Type "Character String" is set in InfoObject A (Option A) Explanation: The data type of InfoObject A (the primary InfoObject) does not influence whether InfoObject B can be converted into a navigational attribute. The data type of InfoObject B (the attribute) is more relevant in this context.

Reference: While the data type of InfoObject A may affect how the attribute is displayed or processed, it does not impose restrictions on converting InfoObject B into a navigational attribute.

5. Conversion Routine "ALPHA" is set in InfoObject A (Option E) Explanation: Conversion routines like

"ALPHA" are used to format or transform data during input/output operations. These routines do not impact the ability to convert an attribute into a navigational attribute.

Reference: Conversion routines are applied at the field level and do not interfere with the structural properties required for navigational attributes.

Conclusion The correct answers are B (Attribute Only is set in InfoObject B), C (High Cardinality is set in InfoObject B), and D (InfoObject B is defined as a Key Figure). These properties directly conflict with the requirements for navigational attributes in SAP BW/4HANA.

NEW QUESTION # 79

How does SAP position SAP Datasphere in supporting business users? Note: There are 3 correct answers to this question.

- A. Business users can create restricted calculated columns based on existing models.
- B. Business users can allocate system resources without IT involvement.
- C. Business users can upload their own CSV files.
- D. Business users can leverage embedded analytic Fiori apps for data analysis.
- E. Business users can create agile models from different sources.

Answer: C,D,E

Explanation:

SAP Datasphere (formerly known as SAP Data Warehouse Cloud) is designed to empower business users by providing self-service capabilities while maintaining governance and scalability. Let's analyze each option to determine why A, B, and E are correct:

* Explanation: SAP Datasphere allows business users to create agile data models by integrating data from various sources, such as on-premise systems, cloud applications, and external datasets. This flexibility enables users to build models that reflect their specific business needs without heavy reliance on IT.

* The platform provides tools like the "Data Builder" and "Space Management" to facilitate the creation of models from diverse data sources. These tools are designed to be user-friendly, enabling business users to work independently.

2. Business users can leverage embedded analytic Fiori apps for data analysis (Option B) Explanation:

SAP Datasphere integrates with SAP Analytics Cloud (SAC) and other analytics tools, allowing business users to leverage embedded Fiori apps for data analysis. These apps provide pre-built dashboards and visualizations, enabling users to perform advanced analytics without requiring technical expertise.

Reference: Embedded analytics in SAP Datasphere supports real-time insights and decision-making, aligning with SAP's vision of empowering business users through intuitive tools.

3. Business users can allocate system resources without IT involvement (Option C) Explanation: While SAP Datasphere provides self-service capabilities, resource allocation (e.g., memory, CPU, storage) is typically managed at the administrative level to ensure optimal performance and governance. Business users do not have direct control over system resources to prevent misuse or over-allocation.

Reference: Resource management in SAP Datasphere is governed by administrators who define quotas and limits for spaces and users. This ensures that the system remains stable and scalable.

4. Business users can create restricted calculated columns based on existing models (Option D) Explanation: Creating restricted calculated columns requires a deeper understanding of data modeling and SQL scripting, which is typically beyond the scope of business users. This task is more suited for data engineers or power users who have technical expertise.

Reference: While SAP Datasphere supports advanced modeling features, these are often used by technical users rather than

business users.

5. Business users can upload their own CSV files (Option E) Explanation: SAP Datasphere allows business users to upload CSV files directly into their spaces. This feature enables users to incorporate their own data into the platform for analysis and modeling, fostering agility and collaboration.

Reference: The ability to upload CSV files is part of SAP Datasphere's self-service capabilities, empowering business users to integrate personal or departmental data without IT intervention.

NEW QUESTION # 80

In a BW query with cells, you need to overwrite the initial definition of a cell. Which cell types can you use?

Note: There are 2 correct answers to this question.

- A. Selection cell
- B. Reference cell
- C. Help cell
- D. Formula cell

Answer: A,D

NEW QUESTION # 81

Which SAP BW/4HANA objects support the feature of generating an external SAP HANA View? Note:

There are 2 correct answers to this question.

- A. BW query
- B. Open ODS view
- C. Semantic group object
- D. Composite Provider

Answer: A,B

Explanation:

In SAP BW/4HANA, certain objects support the generation of external SAP HANA views, enabling seamless integration with SAP HANA's in-memory capabilities and allowing consumption by other tools or applications outside of SAP BW/4HANA. Below is an explanation of the correct answers:

A). BW query A BW query in SAP BW/4HANA can generate an external SAP HANA view. This feature allows the query to be exposed as a calculation view in SAP HANA, making it accessible for reporting tools like SAP Analytics Cloud (SAC), SAP BusinessObjects, or custom applications. By generating an external HANA view, the BW query leverages SAP HANA's performance optimization while maintaining the analytical capabilities of SAP BW/4HANA.

* SAP BW/4HANA Query Designer includes functionality to expose queries as external HANA views. This is documented in the SAP BW/4HANA Query Design Guide and is part of the broader integration between SAP BW/4HANA and SAP HANA.

B). Open ODS view Open ODS views are designed to provide direct access to data stored in SAP HANA tables or other sources. They inherently support the generation of external SAP HANA views, as they are tightly integrated with SAP HANA's modeling capabilities. Open ODS views act as a bridge between SAP BW/4HANA and SAP HANA, allowing data to be consumed directly by external tools or applications via HANA views.

Reference: The Open ODS view functionality is a core feature of SAP BW/4HANA, as described in the SAP BW/4HANA Modeling Guide. It is specifically designed to leverage SAP HANA's native capabilities, including the generation of external views.

Incorrect Options C. Composite Provider Composite Providers in SAP BW/4HANA combine data from multiple sources (e.g., InfoProviders, Open ODS views, or HANA tables) into a unified structure for reporting. However, Composite Providers do not directly support the generation of external SAP HANA views. While they can be used within SAP BW/4HANA for reporting purposes, their architecture does not include the ability to expose themselves as HANA views.

Reference: The SAP BW/4HANA Modeling Guide explicitly states that Composite Providers are internal to SAP BW/4HANA and do not generate external HANA views.

D). Semantic group object Semantic group objects are used to organize and manage metadata in SAP BW/4HANA. They do not represent physical data structures or support the generation of external SAP HANA views. Instead, they serve as logical containers for grouping related objects, such as InfoObjects or queries, for easier navigation and maintenance.

Reference: The SAP BW/4HANA Administration Guide describes semantic groups as organizational tools rather than data modeling or integration components.

Conclusion The two SAP BW/4HANA objects that support the feature of generating an external SAP HANA view are:

BW query

Open ODS view

These objects enable seamless integration with SAP HANA's in-memory database and allow external tools to consume data modeled in SAP BW/4HANA. This capability underscores the tight integration between SAP BW/4HANA and SAP HANA, leveraging the strengths of both platforms for advanced analytics and reporting.

NEW QUESTION # 82

.....

You may urgently need to attend C_BW4H_2505 certificate exam and get the certificate to prove you are qualified for the job in some area. But what certificate is valuable and useful and can help you a lot? Passing the test certification can help you prove that you are competent in some area and if you buy our C_BW4H_2505 Study Materials you will pass the test almost without any problems. with a high pass rate as 98% to 100%, our C_BW4H_2505 learning guide can be your best assistant on your way to success.
