NEW QUESTION # 129
Which three data sources support Kerberos delegation with Tableau Server? (Choose three.)

- A. SAP HANA
- B. Teradata
- C. PostgreSQL
- D. SQL Server

Answer: A,B,D

Explanation:
Kerberos delegationallows Tableau Server to pass a user's Kerberos credentials to a data source for seamless authentication (SSO)-let's explore which sources support it:
* Kerberos Overview:
* Used with Active Directory (AD) for SSO in Windows environments.
* Tableau Server delegates the user's ticket to the data source, avoiding embedded credentials.
* Requires:
* Data source support for Kerberos.
* Proper configuration (e.g., SPN, constrained delegation).
* Supported Data Sources: Per Tableau's documentation:
* Option A (Teradata): Correct.
* Details: Supports Kerberos delegation-common in enterprise data warehouses.
* Config: Enable in TSM (tsm authentication kerberos configure) and set SPN for Teradata.
* Option C (SQL Server): Correct.
* Details: Fully supports Kerberos-widely used with AD-integrated SQL Server instances.
* Config: Requires AD setup and "Trustworthy" delegation in SQL Server.
* Option D (SAP HANA): Correct.
* Details: Supports Kerberos SSO via delegation-popular in SAP ecosystems.
* Config: Needs HANA Kerberos setup (e.g., keytab) and Tableau Server integration.
* Option B (PostgreSQL): Incorrect.
* Why: Supports Kerberos authentication natively, but Tableau Server doesn't enable delegation to PostgreSQL-users must embed credentials or use other methods (e.g., OAuth).
Why This Matters: Kerberos delegation enhances security by avoiding stored passwords-knowing supported sources ensures SSO feasibility.

NEW QUESTION # 130
Select all of the relevant metadata that is contained inside a Tableau Server published data source:

- A. Custom shapes and logos inside a workbook
- B. Sets and groups
- C. Connection information (live vs. extract)
- D. Data access and refresh instructions
- E. Formula calculations
- F. Custom field formatting

Answer: B,C,D,E,F

Explanation:
Explanation
