Passing the test Sitecore-XM-Cloud-Developer certification can help you achieve that and buying our Sitecore-XM-Cloud-Developer test practice dump can help you pass the test smoothly. Our Sitecore-XM-Cloud-Developer study question is superior to other same kinds of study materials in many aspects. Our products' test bank covers the entire syllabus of the test and all the possible questions which may appear in the test. Each question and answer has been verified by the industry experts. The research and production of our Sitecore-XM-Cloud-Developer Exam Questions are undertaken by our first-tier expert team.

Sitecore XM Cloud Developer Certification Exam Sample Questions (Q32-Q37):

NEW QUESTION # 32

When a developer designates a Sitecore template field multilist type, what should they do next?

- A. Add a multilist field to the template.
- **B. Set the multilist list item's data source.**
- C. Add the list items to the multilist item.
- D. Add standard values to the item.

Answer: B

Explanation:

After designating a Sitecore template field as a multilist type, the next step is to set the data source for the multilist. This involves specifying the location within the content tree from which the list items will be drawn.

The data source defines the scope of items that can be selected and displayed in the multilist.

References: The Sitecore XM Cloud documentation provides guidance on configuring selection fields, including multilists. It details how to control the list of items by setting the Source property, which determines the items that appear in the selection list¹. Additionally, developers can use the `Sitecore.Data.Fields.MultilistField` class to manage the items in a multilist field, including setting the data source².

NEW QUESTION # 33

A developer tried to exclude fields in a Sitecore Content Serialization package. Which file should they use to specify the excluded fields?

- A. `user.json`
- B. `sitecore.config`
- **C. `sitecore.json`**
- D. `xmcloud.build.json`

Answer: C

Explanation:

The excluded fields feature is available from CLI 4.0 or later¹. This way, you can reduce the size of your Sitecore Content Serialization package and avoid unnecessary serialization of fields that are not relevant for your deployment scenario¹.

Configure excluded fields

NEW QUESTION # 34

Where can a developer create and edit data templates?

- A. Explorer or Portal
- B. Content Editor or Pages

- C. Pages or Explorer
- **D. Content Editor**

Answer: D

Explanation:

In Sitecore XM Cloud, data templates define the structure of content items, specifying which fields and field types are available. Developers can only create and edit data templates using the Content Editor, which provides access to the template architecture under the `/sitecore/templates` node.

- * Navigate to Content Editor in Sitecore XM Cloud Portal.
- * Expand `/sitecore/templates` in the content tree.
- * Right-click the folder where you want to create the template and select **Insert # Template**.
- * Define template sections and fields in the Template Builder.
- * Save and Publish the template to make it available for content creation.
- * Content Editor is the designated tool for managing data templates in Sitecore XM Cloud.
- * Data templates do not exist in Pages or Explorer, as those are used for content and layout management.
- * Portal does not include template editing functionality—it serves as an entry point for accessing Sitecore services.
- * A. (Pages or Explorer) # Pages is used for visual editing, and Explorer is for browsing items, not creating templates.
- * B. (Explorer or Portal) # Neither provides access to data templates.
- * C. (Content Editor or Pages) # Pages is only for layout and content management, not for template editing.
- * Managing Data Templates in Sitecore XM Cloud
- * Sitecore Content Editor Overview
- * Sitecore XM Cloud Official Documentation

Steps to Create and Edit Data Templates in Content Editor
Why is Option D Correct? Why Other Options Are Incorrect? Relevant XM Cloud Documentation References:

NEW QUESTION # 35

A developer has set up a local XM Cloud development environment and would like to connect Sitecore Pages to their locally running XM Cloud instance. However, after following the necessary steps, they're facing issues with the connection. Of the options below, what is the most likely potential reason for this issue?

- A. The value of the local storage entry "Sitecore.Pages.XmCloud" should be set to enabled.
- B. The value of the local storage entry "Sitecore.Pages.LocalXmCloudUrl" should be set to `https://pages.sitecorecloud.io`.
- **C. The environment variable "SITECORE_Pages_CORS_Allowed_Origins" is not correctly configured to include `pages.sitecorecloud.io`.**
- D. The browser developer tools console does not support the local storage functionality required for this connection.

Answer: C

NEW QUESTION # 36

Which of the following needs to happen for a developer to be able to log in into the XM Cloud Deploy app?

- A. Only the Organization Owner can update their role using the XM Cloud Deploy app.
- **B. An Organization Admin or Organization Owner must update their role in the Sitecore Cloud Portal.**
- C. Only the Organization Owner can update their role in the Sitecore Cloud Portal.
- D. An Organization Admin or Organization Owner must update their role using the XM Cloud Deploy app.

Answer: B

Explanation:

According to the Sitecore XM Cloud Documentation for Developers¹, to use the XM Cloud Deploy app, you must be an Organization Admin or Organization Owner in your Sitecore Cloud Portal organization. An Organization Admin or Organization Owner can grant a team member access to the XM Cloud Deploy app by changing their organization role to Admin². This can be done in the Sitecore Cloud Portal, not in the XM Cloud Deploy app.

2: Invite team members to your Sitecore Cloud Portal organization | XM Cloud Documentation for Developers
