

Latest Test 1z1-076 Experience & Real 1z1-076 Exam Dumps

Latest Free Practice Tests for Microsoft Azure AZ-104 2025

Why Choose Us:

- ✓ Real Exam-Based Questions
- ✓ Updated for 2025
- ✓ Instant Feedback & Explanations
- ✓ Exam Readiness Score
- ✓ Trusted by 10,000+ Aspirants

www.jobexamprep.com www.clearcatnet.com

Our company is a professional certificate exam materials provider, we have occupied in this field for years, and we are famous for offering high quality and high accurate 1z1-076 study materials. Moreover, we have a professional team to research the latest information of the exam, we can ensure you that 1z1-076 exam torrent you receive is the latest we have. In order to strengthen your confidence for 1z1-076 Exam Materials, we also pass guarantee and money back guarantee, and if you fail to pass the exam, we will refund your money. We have professional service stuff, and if you have any questions, you can consult them.

Oracle 1z1-076 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none">Monitoring a Data Guard Broker Configuration: The topic covers the use of Enterprise Manager and DGMGRL to monitor Data Guard configurations and explains the various data protection modes available.
Topic 2	<ul style="list-style-type: none">Managing Oracle Net Services in a Data Guard Environment: The section focuses on Oracle Net Services and its role in Data Guard networking setup.
Topic 3	<ul style="list-style-type: none">Using Flashback Database in a Data Guard Configuration: This topic covers the configuration and advantages of using Flashback Database in a Data Guard setup, as well as the process of enabling fast-start failover for seamless role changes.
Topic 4	<ul style="list-style-type: none">Enhanced Client Connectivity in a Data Guard Environment: This topic focuses on enhancing client connectivity in a Data Guard setup and implementing failover procedures for seamless client redirection. It also covers application continuity to ensure uninterrupted operations during role transitions.
Topic 5	<ul style="list-style-type: none">Oracle Data Guard Basics: This topic covers the essential architecture and concepts of Oracle Data Guard. It includes sub-topics such as the physical and logical standby database comparison, benefits of Data Guard, and its integration with multi-tenant databases.

Topic 8	<ul style="list-style-type: none"> Backup and Recovery Considerations in an Oracle Data Guard Configuration: In this topic, Backup and recovery procedures in a Data Guard configuration are discussed, including RMAN backups, offloading to physical standby, and network-based recovery.

Real 1z1-076 Exam Dumps, 1z1-076 Guaranteed Success

As we all know that if we get a certificate for the exam, we will have more advantages in the job market. We have 1z1-076 study guide for you to get the certificate quickly. Besides, we are pass guarantee, if you indeed fail the exam, we will be money back guarantee. 1z1-076 Study Guide of us obtain many good feedbacks from our customers. Free demo of 1z1-076 exam dumps are provided by us, you can have a try before you buy them, so that you can know the mode of the 1z1-076 learning materials.

Oracle Database 19c: Data Guard Administration Sample Questions (Q98-Q103):

NEW QUESTION # 98

Which TWO statements are true about configuring Oracle Net Service in a Data Guard environment?

- A. A static service must be registered with the local listener to enable DGMGRL to restart instances during the course of broker operations.
- B. Install the oracle-database-preinstall-19c package to set the kernel parameters for Oracle Net based on the Data Guard best practice guidelines.
- C. Installing the oracle-database-preinstall-19c package is NOT sufficient to set up operating system kernel parameters for Oracle Net.
- D. Enterprise Manager does not require static service registration to restart instances during the course of broker operations.
- E. It is necessary to use the failover clause for an address_list with multiple address lists in the tnsnames.ora file.

Answer: A,C

Explanation:

* A static service must be registered with the local listener to enable DGMGRL to restart instances during the course of broker operations (A): For DGMGRL (Data Guard Manager Command-Line Interface) to perform instance management operations, such as restarting instances, a static service registration in the listener is required. This allows the broker to connect to the database instance even when the instance is not fully up and the dynamic service registration is not available.

* Installing the oracle-database-preinstall-19c package is NOT sufficient to set up operating system kernel parameters for Oracle Net (C): While the oracle-database-preinstall-19c package automates the setting of several kernel parameters to meet the preinstallation requirements for Oracle Database, it does not specifically tailor all settings for Oracle Net in a Data Guard configuration. Additional manual configuration may be required to optimize Oracle Net services for Data Guard operations.

NEW QUESTION # 99

Which two steps must be performed before running DUPLICATE TARGET DATABASE FOR STANDBY using RMAN?

- A. Configure Oracle Net connectivity between the primary host and the standby host.
- B. Create a standby control file.
- C. Create an SPFILE for the standby database.
- D. Run the nid utility to modify the DBID of the primary database.
- E. Transfer a copy of the password file from the primary host to the standby host.

Answer: A,E

NEW QUESTION # 100

Your Data Guard environment consists of these components and settings:

1. A primary database
 2. Two remote physical standby databases
 3. The redo transport mode is set to sync
 4. Real-time query is enabled for both standby databases
 5. The DB_BLOCK_CHECKING parameter is set to TRUE on both standby databases
- You notice an increase in redo apply lag time on both standby databases.

Which two would you recommend to reduce the redo apply lag on the standby databases?

- A. Increase the number of standby redo log files on the standby databases.
- **B. Increase the size of standby redo log files on the standby databases.**
- C. Decrease the redo log file size on the primary database.
- **D. Lower DB_BLOCK_CHECKING to MEDIUM or low on the standby databases.**
- E. Increase the size of the buffer cache on the physical standby database instances.

Answer: B,D

Explanation:

To reduce the redo apply lag on standby databases, one could increase the size of the standby redo log files. Larger redo log files can accommodate more redo data, which may reduce the frequency of log switches and allow for more continuous application of redo data. Additionally, lowering the DB_BLOCK_CHECKING parameter to MEDIUM or LOW on the standby databases can help improve redo apply performance. High block checking can impose additional CPU overhead during the application of redo data, potentially increasing apply lag times. By reducing the level of block checking, you can lessen this overhead and help reduce the apply lag.

NEW QUESTION # 101

Which THREE steps are prerequisites for the creation of a physical standby database on a separate server using the RMAN active database duplication method?

- **A. Establish user equivalence for the database software owner between the primary host and standby host.**
- B. Put the primary database into archivelog mode.
- **C. Configure Oracle Net connectivity on the primary host to the standby database instance.**
- D. Set the DB_UNIQUE_NAME parameter on the primary database to a different value than that of the DB_NAME name parameter.
- **E. startup nomount the standby database instance.**

Answer: A,C,E

Explanation:

Creating a physical standby database using RMAN active database duplication requires certain prerequisites to ensure a successful and seamless operation:

* Configure Oracle Net connectivity on the primary host to the standby database instance (A):

* Proper Oracle Net connectivity between the primary and standby servers is essential for communication and data transfer during the duplication process. Oracle Net services provide the network foundation for Oracle Database, Oracle Net Listener, and Oracle applications.

* Establish user equivalence for the database software owner between the primary host and standby host (B): User equivalence ensures that the user who owns the Oracle Database software on the primary server has the same privileges on the standby server. This is crucial for RMAN to perform operations on both servers without encountering permission issues.

* Startup nomount the standby database instance (C): The standby database instance needs to be started in the NOMOUNT stage before the duplication can begin. This prepares the environment for creating the control file and restoring the database without mounting it, which is a necessary step in the RMAN duplication process.

NEW QUESTION # 102

Which THREE statements are true about snapshot standby databases?

- A. If datafiles grow while a database is a snapshot standby database, then they shrink when converted back to a physical standby database.

- B. A snapshot standby database must be opened at least once in read-write mode before it can be converted into a physical standby database.
- C. A snapshot standby database can be the only standby database in a Maximum Protection Oracle Data Guard configuration.
- D. Snapshot standby databases may be used for rolling database upgrades.
- E. A guaranteed restore point is created automatically when a physical standby database is converted into a snapshot standby database.

Answer: B,D,E

NEW QUESTION # 103

.....

The 1z1-076 practice materials are a great beginning to prepare your exam. Actually, just think of our 1z1-076 practice materials as the best way to pass the exam is myopic. They can not only achieve this, but ingeniously help you remember more content at the same time. It is estimated conservatively that the passing rate of the exam is over 98 percent with our 1z1-076 Study Materials as well as considerate services. We not only provide all candidates with high pass rate study materials, but also provide them with good service.
