Real VMCE_v12 are uploaded by Real Users which provide VMCE_v12 Practice Tests Solutions.

All contents of VMCE_v12 training guide are being explicit to make you have explicit understanding of this exam. Their contribution is praised for their purview is unlimited. None cryptic contents in VMCE_v12 learning materials you may encounter. And our VMCE_v12 Exam Questions are easy to understand and they are popular to be sold to all over the world. Just look at the comments on the website, then you will know that we have a lot of loyal customers.

Veeam Certified Engineer v12 Sample Questions (Q103-Q108):

NEW QUESTION # 103

A backup administrator decided to move the Veeam Backup & Replication server and configuration database to new servers. Which configuration restore mode should be used?

- A. Planned failover
- **B. Migrate**
- C. Failover plan
- D. Restore

Answer: B

Explanation:

The "Migrate" option is typically used when you're moving the entire Veeam Backup & Replication infrastructure, including its configuration and database, to a new server environment. This option ensures that the configuration settings, jobs, and other relevant data are transferred accurately to the new servers while maintaining continuity and ensuring minimal downtime for backup and replication operations.

NEW QUESTION # 104

Which of the following can help reduce the amount of traffic that is sent over the network during the second run of a replication job?

- A. Replica mapping
- **B. Replica seeding**
- C. WAN acceleration for replicas
- D. Re-IP rules

Answer: B

Explanation:

NEW QUESTION # 105

A daily backup job for seven Hyper-V VMs has been configured at the main site, keeping 14 days' worth of backup files. They want to get a copy of the VM backups to a repository at the disaster recovery site. They want to keep six months' worth of backup files at the disaster recovery site. They also need to be able to restore the VMs to any given day within two months and any given week within six months. How should a backup copy job be configured to meet these requirements?

- A. Use periodic copy (pruning) mode, keeping 180 days of retention.
- B. Use periodic copy (pruning) mode, keeping 62 days of retention and six monthly GFS restore points.
- **C. Use immediate copy (mirroring) mode, keeping 62 days of retention and 26 weekly GFS restore points.**
- D. Use immediate copy (mirroring) mode, keeping 180 days of retention.

Answer: C

Explanation:

Explanation

According to the Veeam Backup & Replication user guide¹, you can use a long-term retention policy (GFS) to keep backup files for longer periods of time. GFS stands for grandfather-father-son and refers to a backup rotation scheme that allows you to create weekly, monthly, quarterly and yearly restore points².

Therefore, if you want to be able to restore the VMs to any given day within two months and any given week within six months, you should use a GFS policy with 62 days of retention and 26 weekly GFS restore points.

The simplest configuration would be an immediate copy (mirroring) mode with these settings (option B).

NEW QUESTION # 106

Which of the following statements regarding the Backup from Storage Snapshots feature when backing up virtual machines from a VMware vSphere environment are true? (Choose two.)

- A. A virtual machine with one virtual drive on shared storage and another drive on local storage will failover to a different

transport mode

- B. Higher transfer speed from production NFS datastores
- C. Reduce the impact of consolidating VM snapshots
- D. Lower impact on WAN link during off-site backups
- E. A virtual machine with one virtual drive on shared storage and another drive on local storage will be processes with Backup from Storage Snapshots transport mode

Answer: B,C

NEW QUESTION # 107

what should be Implemented when backing up HAS file shares to ensure there Is more than one copy of the data?

- A. Cache repository
- B. Backup repository
- C. Secondary copy
- D. Archive repository

Answer: B

Explanation:
