

Latest USGBC LEED-AP-BD-C Dumps Pdf & Free LEED-AP-BD-C Download Pdf

2025 Latest ITCertMagic LEED-AP-BD-C PDF Dumps and LEED-AP-BD-C Exam Engine Free Share:
<https://drive.google.com/open?id=1UYJ9cTatYQ-9s4gKsKdqflkPctfO1h1>

Do not waste further time and money, get real USGBC LEED-AP-BD-C pdf questions and practice test software, and start LEED-AP-BD-C test preparation today. ITCertMagic will also provide you with up to 365 days of free exam questions updates. Free demo of LEED-AP-BD-C Dumps PDF allowing you to try before you buy and one-year free update will be allowed after purchased.

USGBC LEED-AP-BD-C Exam Syllabus Topics:

Topic	Details
Topic 1	• Building Loads: This topic is focused on optimizing building performances through effective load management. It addresses design considerations such as building orientation and glazing selection while clarifying regional factors that influence these decisions.
Topic 2	• Sustainable Sites: It covers site assessment and planning that involves evaluating various site characteristics, such as topography, hydrology, climate, vegetation, and soil conditions. It also covers assessing a site's potential as a resource for energy flows while addressing construction activity pollution prevention measures.
Topic 3	• Integrative Strategies: It emphasizes the importance of an integrative process. The topic also covers their knowledge about the value of teamwork in developing integrative green strategies and how they can collaborate throughout different project phases.
Topic 4	• Energy and Atmosphere: In this topic, LEED Green Associates focuses on building reuse, including historic building renovations. It covers material reuse strategies, enclosure materials, and permanently installed interior components into new designs.
Topic 5	• LEED Process: This topic tests the skills of LEED Green Associates involved in green building initiatives. It focuses on various methods to achieve LEED goals, such as developing credit interpretation rulings and utilizing Regional Priority Credits to explore synergies within the LEED system.
Topic 6	• Water Efficiency: This topic measures the skills of LEED Green Associates in optimizing water use in building projects. It explores strategies for reducing outdoor water use through efficient irrigation practices, including landscape water requirements and irrigation systems. It also covers using native and adaptive plant species to minimize irrigation demands.

100% Pass 2025 LEED-AP-BD-C: Trustable Latest LEED AP Building Design + Construction (LEED AP BD+C) Dumps Pdf

These LEED-AP-BD-C mock tests are made for customers to note their mistakes and avoid them in the next try to pass LEED AP Building Design + Construction (LEED AP BD+C) (LEED-AP-BD-C) exam in a single try. These USGBC LEED-AP-BD-C mock tests will give you real LEED-AP-BD-C exam experience. This feature will boost your confidence when taking the USGBC LEED-AP-BD-C Certification Exam. The 24/7 support system has been made for you so you don't feel difficulty while using the product. In addition, we offer free demos and up to 1 year of free USGBC Dumps updates. Buy It Now!

USGBC LEED AP Building Design + Construction (LEED AP BD+C) Sample Questions (Q132-Q137):

NEW QUESTION # 132

In order to comply with Indoor Environmental Quality Credit, Enhanced Indoor Air Quality Strategies, Option 2, Additional Enhanced IAQ Strategies

- A. all outdoor air supply systems must have an airflow measurement device that measures at least 90% of the airflow
- B. CO2 monitors must be fitted in all densely occupied spaces and configured to provide an alert
- C. all particle filters in the ventilation system must meet Comité Européen de Normalisation (CEN) standard Class F7 or better
- D. all entrances to the building must have entryway systems 10 ft. (3 m) long in the direction of travel

Answer: C

Explanation:

To comply with the Indoor Environmental Quality Credit, Enhanced Indoor Air Quality Strategies, Option 2, all particle filters in the ventilation system must meet the Comité Européen de Normalisation (CEN) standard Class F7 or better. This requirement ensures that the air quality inside the building is maintained at a high standard, contributing to the health and well-being of the occupants. NEW QUESTION # 133

A new school with a 20 car parking lot has set aside four preferred parking spaces for green vehicles. What else must the project team provide to achieve Location and Transportation Credit, Green Vehicles?

- A. Provide qualifying electrical vehicle supply equipment in 2% of all parking spaces
- B. Nothing; the project team has met the credit requirements
- C. Provide an additional parking space for a low-emitting and fuel-efficient vehicle
- D. Provide secure bike racks for 5% of the building occupants

Answer: A

Explanation:

Explanation

The correct answer is D, provide qualifying electrical vehicle supply equipment in 2% of all parking spaces.

According to the LEED v4 Reference Guide for Building Design and Construction, the Location and Transportation Credit, Green Vehicles, requires that projects provide preferred parking for green vehicles for

5% of the total vehicle parking capacity of the site. Green vehicles are defined as vehicles that achieve a minimum green score of 40 on the American Council for an Energy Efficient Economy (ACEEE) annual vehicle rating guide1 In addition, projects must provide one of the following:

Install alternative-fuel fueling stations for 3% of the total vehicle parking capacity of the site.

Alternative fuels are defined by the U.S. Energy Policy Act of 1992 and include biodiesel, electricity, ethanol, hydrogen, natural gas, and propane.

Install electrical vehicle supply equipment (EVSE) for 2% of the total vehicle parking capacity of the site. EVSE must be Level 2 or higher as defined by SAE International's J1772 standard.

Provide a discounted parking rate of at least 20% for green vehicles. The discounted rate must be available to all customers (not limited by time of day or user groups), publicly posted at the entrance of the parking area, and included in all marketing materials for the parking facility¹. In this case, the project team has provided preferred parking for green vehicles for 20% of the total vehicle parking capacity of the site (4 out of 20 spaces), which exceeds the minimum requirement of 5%. However, they still need to provide one of the additional options listed above to achieve the credit. The most feasible option for a school project with a small parking lot would be to install EVSE for 2% of all parking spaces, which would be equivalent to one space. Therefore, answer D is correct.

The other answers are incorrect because they do not meet the credit requirements. Answer A is incorrect because providing preferred parking alone is not sufficient to achieve the credit; one of the additional options must also be provided. Answer B is incorrect because providing bike racks is not relevant to this credit, which focuses on green vehicles; bike racks are part of another credit, Location and Transportation Credit, Bicycle Facilities. Answer C is incorrect because providing an additional parking space for a low-emitting and fuel-efficient vehicle would not increase the percentage of preferred parking above 20%, which is already more than enough; moreover, low-emitting and fuel-efficient vehicles are defined differently from green vehicles in LEED v4 and have their own credit, Location and Transportation Credit, Reduced Parking Footprint¹. References: 1: LEED v4 Reference Guide for Building Design and Construction, Location and Transportation Credit: Green Vehicles, page 467.

NEW QUESTION # 134

What is the reference standard that defines the requirements for LEED energy modeling?

- A. ASHRAE Advanced Energy Design Guide
- B. ASHRAE 62.1-2010
- C. ASHRAE 90.1-2010 Appendix G
- D. Core Performance Guide

Answer: C

Explanation:

Detailed Explanation:

ASHRAE 90.1-2010 Appendix G is the reference standard used for energy modeling in LEED projects. It establishes guidelines for baseline building performance and energy simulation comparisons, allowing project teams to demonstrate energy performance improvements relative to code-minimum buildings.

NEW QUESTION # 135

Increasing which of the following variables will require an increase in the outdoor airflow rate under Indoor Environmental Quality Prerequisite, Minimum Indoor Air Quality Performance?

- A. Supply air velocity
- B. System ventilation efficiency
- C. Number of occupants
- D. Supply air temperature set point

Answer: C

NEW QUESTION # 136

What is the basis of energy consumption in determining the percentage of green power or carbon offsets?

- A. Performance
- B. Quantity
- C. Quality
- D. Efficiency

Answer: B

Explanation:

The basis of energy consumption in determining the percentage of green power or carbon offsets is the quantity of energy used by the project, measured in kilowatt-hours (kWh) or British thermal units (Btu).

Green power is electricity generated from renewable sources, such as solar, wind, hydro, biomass, or geothermal. Carbon offsets are reductions or removals of greenhouse gas emissions from a project or activity that compensates for the emissions from another

source. According to the LEED Reference Guide for Building Design and Construction¹, the Energy and Atmosphere Credit, Green Power and Carbon Offsets, requires the project to engage in a contract for qualified resources that meet the following requirements:

- * The contract term is at least five years.
- * The green power or carbon offsets are based on the quantity of energy consumed by the building.
- * The green power is Green-e Energy certified or the equivalent.
- * The carbon offsets are Green-e Climate certified, Verified Carbon Standard certified, Gold Standard certified, or the equivalent.

NEW QUESTION # 137

.....

Whether you are a student or a professional who has already taken part in the work, you must feel the pressure of competition now. However, no matter how fierce the competition is, as long as you have the strength, you can certainly stand out. It's not easy to become better. Our LEED-AP-BD-C exam questions can give you some help. After using our LEED-AP-BD-C Study Materials, you can pass the LEED-AP-BD-C exam faster and you can also prove your strength. Of course, our LEED-AP-BD-C study materials can bring you more than that. You will have a brighter future with the help of our LEED-AP-BD-C exam questions.
