BTW, DOWNLOAD part of Dumper 2V0-41.24 dumps from Cloud Storage: [https://drive.google.com/open?id=19X4wajPZucgNBhgSihUWG-3oXiE\\_4igA](https://drive.google.com/open?id=19X4wajPZucgNBhgSihUWG-3oXiE_4igA)

As you know the registration fee for the VMware NSX 4.X Professional V2 (2V0-41.24) certification exam is itself very high, varying between \$100 and \$1000. And after paying the registration fee for better preparation a candidate needs budget-friendly and reliable VMware NSX 4.X Professional V2 (2V0-41.24) pdf questions. That is why Dumper has compiled the most reliable updated 2V0-41.24 Exam Questions with up to 1 year of free updates. The VMware 2V0-41.24 practice test can be used right after being bought by the customer and they can avail of the benefits given in the VMware NSX 4.X Professional V2 (2V0-41.24) pdf questions.

## VMware 2V0-41.24 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none"><li>• Troubleshoot and Optimize the VMware Solution: This section evaluates the skills of VMware Networking Professionals in troubleshooting and optimizing NSX solutions. Candidates will use log files to identify issues, including locating default log file locations and generating log bundles to assist in diagnostics.</li></ul>
Topic 2	<ul style="list-style-type: none"><li>• Install, Configure, and Administrate the VMware Solution: This domain targets VMware System administrators and emphasizes preparing an NSX infrastructure for deployment. Candidates will learn to create transport zones and configure essential components necessary for a functional NSX environment.</li></ul>
Topic 3	<ul style="list-style-type: none"><li>• VMware Solution: This section measures the skills of VMware NSX Networking professionals and covers knowledge of the VMware Virtual Cloud Network and NSX. Candidates will demonstrate an understanding of the NSX management cluster and the data plane, focusing on how these components interact to provide network virtualization.</li></ul>

## Test VMware 2V0-41.24 Practice | Dump 2V0-41.24 Torrent

We have brought in an experienced team of experts to develop our 2V0-41.24 study materials, which are close to the exam syllabus. With the help of our 2V0-41.24 practice guide, you don't have to search all kinds of data, because our products are enough to meet your needs. And our 2V0-41.24 learning guide can help you get all of the keypoints and information that you need to make sure that you will pass the exam.

## VMware NSX 4.X Professional V2 Sample Questions (Q32-Q37):

### NEW QUESTION # 32

Which CLI command does an NSX administrator run on the NSX Manager to generate support bundle logs if the NSX UI is inaccessible?

- A. set support-bundle file vcpnv.tgz
- B. get support-bundle file vcpnv.tgz
- C. vm-support
- D. esxcli system syslog config logger set -id=nsxmanager

**Answer: B**

Explanation:

To generate the support bundle logs on the NSX Manager via API, the NSX administrator needs to use the POST method with the URL `https://nsxmgr_ip/api/1.0/appliance-management/techsupportlogs/NSX`, where `nsxmgr_ip` is the IP address of the NSX Manager1. This will create a tech support bundle file with a name like `vcpnv.tgz`. To download the generated tech support bundle file via CLI, the NSX administrator needs to use the `get support-bundle file vcpnv.tgz` command on the NSX Manager1. The other commands are incorrect because they either do not generate or download the support bundle logs, or they are not related to the NSX Manager.

### NEW QUESTION # 33

What are two valid options when configuring the scope of a distributed firewall rule? (Choose two.)

- A. Tier-1 Gateway
- B. Group
- C. Segment
- D. DFW
- E. Segment Port

**Answer: B,D**

Explanation:

A group is a logical construct that represents a collection of objects in NSX, such as segments, segment ports, virtual machines, IP addresses, MAC addresses, tags, or security policies. A group can be used to define dynamic membership criteria based on various attributes or filters. A group can also be used as the scope of a distributed firewall rule, which means that the rule will apply to all the traffic that matches the group membership criteria32

### NEW QUESTION # 34

Which CLI command would an administrator use to allow syslog on an ESXi transport node when using the `esxcli` utility?

- A. `esxcli network firewall ruleset set -r syslog -e true`
- B. `esxcli network firewall ruleset -e syslog`
- C. `esxcli network firewall ruleset set -r syslog -e false`
- D. `esxcli network firewall ruleset set -a -e false`

**Answer: A**

Explanation:

The `esxcli network firewall ruleset set -r syslog -e true` command is used to enable the firewall ruleset for syslog on an ESXi host. Setting the `-e` flag to true allows syslog traffic through the ESXi firewall, enabling remote logging for syslog messages from the transport node.

### NEW QUESTION # 35

Which two choices are use cases for Distributed Intrusion Detection? (Choose two.)

- A. Quarantine workloads based on vulnerabilities.
- B. Identify risk and reputation of accessed websites.
- C. Identify security vulnerabilities in the workloads.
- D. Use agentless antivirus with Guest Introspection.

- E. Gain Insight about micro-segmentation traffic flows.

**Answer: A,C**

Explanation:

According to the VMware NSX Documentation, these are two of the use cases for Distributed Intrusion Detection, which is a feature of NSX Network Detection and Response:

Quarantine workloads based on vulnerabilities: You can use Distributed Intrusion Detection to detect vulnerabilities in your workloads and apply quarantine actions to isolate them from the network until they are remediated.

Identify security vulnerabilities in the workloads: You can use Distributed Intrusion Detection to scan your workloads for known vulnerabilities and generate reports that show the severity, impact, and remediation steps for each vulnerability.

### NEW QUESTION # 36

Which three NSX Edge components are used for North-South Malware Prevention? (Choose three.)

- A. Security Analyzer
- B. Thin Agent
- C. RAPID
- D. IDS/IPS
- E. Reputation Service
- F. Security Hub

**Answer: C,D,F**

Explanation:

[https://docs.vmware.com/en/VMware-NSX/4.1/administration/GUID-69DF70C2-1769-4858-97E7-B757CAED08F0.html#:~:text=On%20the%20north%20south%20traffic,Guest%20Introspection%20\(GI%20platform](https://docs.vmware.com/en/VMware-NSX/4.1/administration/GUID-69DF70C2-1769-4858-97E7-B757CAED08F0.html#:~:text=On%20the%20north%20south%20traffic,Guest%20Introspection%20(GI%20platform)

The main components on the edge node for north-south malware prevention perform the following functions:

- \* IDS/IPS engine: Extracts files and relays events and data to the security hub North-south malware prevention uses the file extraction features of the IDS/IPS engine that runs on NSX Edge for north-south traffic.
- \* Security hub: Collects file events, obtains verdicts for known files, sends files for local and cloud-based analysis, and sends information to the security analyzer
- \* RAPID: Provides local analysis of the file
- \* ASDS Cache: Caches reputation and verdicts of known files

### NEW QUESTION # 37

.....

Our society is in the jumping constantly changes and development. So we need to face the more live pressure to handle much different things and face more intense competition. The essential method to solve these problems is to have the faster growing speed than society developing. In a field, you can try to get the 2V0-41.24 Certification to improve yourself, for better you and the better future. With it, you are acknowledged in your profession.
