able to write some notes or highlight the emphasis. PC version of our C-ACDET-2506 test braindumps only supports windows users and it is also one of our popular types to choose.

SAP Certified Associate - Configuring SAP Ariba Strategic Sourcing Suite Sample Questions (Q26-Q31):

NEW QUESTION # 26

When you have created a new custom field and marked it as reportable, saved and published your changes, but the field does not show up in reports. How can you resolve the issue?

- A. You did not assign the custom field to the appropriate report category.
- B. Custom fields must be created in the same module where reports are generated.
- C. Run the "Retrieve flexible fields metadata for reporting" task under Reporting Manager.
- D. Wait 2 hours for the schema to refresh automatically.

Answer: C

Explanation:

After publishing a custom reportable field, the "Retrieve flexible fields metadata for reporting" task must be run to update the reporting schema with the new field metadata. Without this manual step, the reports do not recognize the new field despite it being published. The system does not perform automatic timed refreshes of the schema. Module location or report category assignment is not a prerequisite for report visibility in SAP Ariba's analytics.

NEW QUESTION # 27

You have defined a custom field to have a default value based on another field. You have verified that the defaulting happens correctly the first time. However, when the dependent field change value, your custom field does not change.

What scenarios could cause this? Note: There are 3 correct answers to this question.

- A. Your dependent field does not have the property Refresh screen on value change enabled
- B. The parameter Application.Base.RecomputeValueOnFieldChange is not enabled
- C. The defaulting Expression sets a value that violates the custom field Validity Condition
- D. The custom field has the property Lock Initial value enabled, which prohibits a field to be changed once it's set
- E. Your custom field has the property Respect User Value enabled, and the user has manually entered another value into the field

Answer: A,D,E

NEW QUESTION # 28

A customer has requested that a Contracts field be added to an export event. After creating the field, assigning the appropriate checkbox in the advanced section, and publishing, this field still cannot be found in the export.

What can be done to rectify this? (Select 2 correct answers)

- A. The field must be accepted and published in the data definition
- B. The data definition needs to be refreshed
- C. Custom fields cannot be added to import/exports
- D. A custom visibility expression needs to be added stating isVisibleInExport == true

Answer: A,B

Explanation:

To ensure a custom Contracts field appears in export events, it must be accepted and published in the Data Definition within the Integration Manager, which formally exposes it for integrations (B). Also, the Data Definition should be refreshed (D) so that the export metadata is updated. A custom visibility expression is unnecessary, and custom fields can be added to import/export when configured correctly.

NEW QUESTION # 29

Which data elements are shared in a Suite-Integrated Environment? (Select 3 correct answers)

- A. Supplier Catalogs
- **B. Suppliers**
- **C. Users**
- **D. User Group mapping**
- E. Exception Types

Answer: B,C,D

Explanation:

In a Suite-Integrated SAP Ariba environment, master data elements such as Suppliers, Users, and User Group mappings are shared across sourcing and procurement modules, enabling unified access and data consistency. Supplier Catalogs and Exception Types are not typically shared master data in this context. This integration supports seamless workflows and consistent security roles, enhancing usability and governance.

NEW QUESTION # 30

What are the key characteristics of a Bluefield deployment scenario? Note: There are 2 correct answers to this question.

- A. The Test site has been configured using the SAP Bluefield template
- **B. The customer already has an SAP Ariba Strategic Sourcing suite solution deployed**
- **C. The Production site may have live transactions**
- D. Many team members have a naive perception of deploying software solutions

Answer: B,C

NEW QUESTION # 31

.....
