JN0-105 Pass4sure Free PDF | High-quality JN0-105 Practice Guide: Junos, Associate (JNCIA-Junos)

It is simple and concise study material. The Junos, Associate (JNCIA-Junos) (JN0-105) PDF Questions consist of actual exam questions. The JN0-105 PDF is a printable format and is extremely portable. You can get a hard copy or share it on your smartphone, laptop, and tablet as needed. The Juniper JN0-105 PDF is also regularly reviewed by our experts so that you never miss important changes from Juniper JN0-105.

Juniper JN0-105 Exam Syllabus Topics:

Topic	Details
Topic 1	• Routing Policy and Firewall Filters: The topic of Routing Policy and Firewall Filters covers routing policy and firewall filters on Junos devices. Furthermore, the topic also deals with routing policies and firewall filters on a Junos device.
Topic 2	• User Interfaces: This topic delves into identifying the concepts, operation, or functionality of the Junos user interface.
Topic 3	• Routing Fundamentals: This topic discusses pointing out basic routing concepts or functionality for Junos devices. Moreover, the topic also describes configuring or monitoring basic routing elements for a Junos device.
Topic 4	• Networking Fundamentals: The topic networking fundamentals covers identifying the concepts and functionality of different fundamental elements of networking.

Juniper Junos, Associate (JNCIA-Junos) Sample Questions (Q15-Q20):

NEW QUESTION # 15

You have logged on to a Junos device and are at the operational mode prompt.
Which two commands are used at this prompt? (Choose two.)

- A. request system shutdown
- B. show interface ge-0/0/0
- C. run show interface terse
- D. set interface ge-0/0/0 unit 0 family inet

Answer: A,B

Explanation:

At the operational mode prompt on a Junos device, you can use various commands to view the device's status and request system operations. The show interface ge-0/0/0 command is used to display information about a specific interface, while the request system shutdown command is used to properly shut down the device.

The set command is used in configuration mode, not operational mode, and the run command is used to execute operational mode commands from configuration mode.

NEW QUESTION # 16

You are logged in to a Junos OS device with SSH and issued the show protocols | compare command in the configuration, but no output is shown.
Which statement is correct in this scenario?

- A. There are no changes to the candidate configuration.
- B. The command only works for interface configuration differences.
- C. You must commit the configuration before any output will be shown.
- D. Someone accidentally deleted the active configuration.

Answer: A

Explanation:

The show | compare command in Junos OS is used to display the differences between the candidate configuration and the active configuration. If no output is shown when you issue this command, it means that there are no changes between the candidate

configuration and the active configuration. This indicates that the candidate configuration is identical to the active configuration, and thus no differences are displayed.

Reference:

"The show | compare command displays the differences between the candidate configuration and the active configuration. If there are no changes, no output is displayed."

NEW QUESTION # 17

In the Junos OS, which keyboard shortcut allows you to move to the start of the line?

- A. Ctrl+k
- B. Ctrl+e
- C. Ctrl+w
- D. Ctrl+a

Answer: D

Explanation:

In the Junos OS command-line interface (CLI), the keyboard shortcut Ctrl+a is used to move the cursor to the start of the line. This is a common convention in many command-line environments and text editors, providing a quick way to navigate to the beginning of the current command or line of text without having to use the arrow keys. This can be particularly useful for making quick edits to commands or for navigating long lines of text more efficiently.

NEW QUESTION # 18

A network administrator is attempting to route traffic on a Juniper switch to one of three different VLANs:

Prod, Test, and Dev. Each VLAN has been assigned a numerical value.

In this scenario, what are these numerical values called?

- A. interfaces
- B. tags
- C. names
- D. defaults

Answer: B

Explanation:

In the context of VLANs (Virtual Local Area Networks) on a Juniper switch, the numerical values assigned to each VLAN, such as those for Prod, Test, and Dev, are known as VLAN tags. These tags are part of the 802.1 Q VLAN standard, which allows multiple VLANs to coexist on a single physical network. Each tag uniquely identifies the VLAN to which a frame belongs, enabling the switch to segregate and manage traffic based on VLAN membership. This tagging mechanism allows for efficient traffic separation and management, ensuring that devices within one VLAN do not receive traffic intended for another, thus maintaining network security and efficiency.

NEW QUESTION # 19

A network administrator is attempting to route traffic on a Juniper switch to one of three different VLANs:

Prod, Test, and Dev. Each VLAN has been assigned a numerical value.

In this scenario, what are these numerical values called?

- A. interfaces
- B. tags
- C. names
- D. defaults

Answer: B

Explanation:

In the context of VLANs (Virtual Local Area Networks) on a Juniper switch, the numerical values assigned to each VLAN, such as those for Prod, Test, and Dev, are known as VLAN tags. These tags are part of the 802.1 Q VLAN standard, which allows multiple VLANs to coexist on a single physical network. Each tag uniquely identifies the VLAN to which a frame belongs, enabling

the switch to segregate and manage traffic based on VLAN membership. This tagging mechanism allows for efficient traffic separation and management, ensuring that devices within one VLAN do not receive traffic intended for another, thus maintaining network security and efficiency.
