What is more difficult is not only passing the Aruba Campus Access Associate Exam certification exam, but the acute anxiety and the excessive burden also make the candidate nervous to qualify for the HP HPE6-A85 Certification. If you are going through the same tough challenge, do not worry because Easy4Engine is here to assist you.

HP Aruba Campus Access Associate Exam Sample Questions (Q97-Q102):

NEW QUESTION # 97

What does the status of "ALFOE" mean when checking LACP with "show lacp interfaces"?

- A. LACP is in a synchronizing process
- B. The interface on the local switch is configured as static-LAG
- C. LACP is working fine with no problems
- D. LACP is not configured on the peer side

Answer: D

NEW QUESTION # 98

When using Aruba Central what can identify recommended steps to resolve network health issues and allows you to share detailed information with support personnel?

- A. OAIOps
- B. Audit Trail
- C. Overview Dashboard
- D. Alerts and Events

Answer: A

Explanation:

OAIOps is a feature of Aruba Central that uses artificial intelligence and machine learning to identify recommended steps to resolve network health issues and allows you to share detailed information with support personnel. OAIOps provides insights into network performance, root cause analysis, anomaly detection, proactive alerts, and automated remediation actions. OAIOps also integrates with Aruba User Experience Insight (UXI) sensors to measure and improve user experience across wired and wireless networks. NEW QUESTION # 99

When using an Aruba standalone AP you select "Native VLAN" for the Client VLAN Assignment In which subnet will the client IPs reside?

- A. The same subnet as the Aruba ESP gateway
- B. The same subnet as the mobility controller
- C. The same subnet as the mobility conductor
- D. The same subnet as the access point

Answer: D

Explanation:

When using an Aruba standalone AP, selecting "Native VLAN" for the Client VLAN Assignment means that the clients will get their IP addresses from the same subnet as the access point's IP address. This is because the access point acts as a DHCP server for the clients in this mode. References:https://www.arubanetworks.com/techdocs/Instant_86_WebHelp/Content/instant-ug/iap-dhcp/iap-dhcp.htm

NEW QUESTION # 100

You need to troubleshoot an Aruba CX 6300F switch that fails to boot correctly. Select the option that allows you to access the switch and see the boot options available for OS images and ServiceOS.

- A. USB-C console port
- B. RJ-45 console port
- C. Omgmt port using SSH
- D. USB-A console port

Answer: A

Explanation:

To troubleshoot an Aruba CX 6300F switch that is failing to boot correctly, you would typically use the USB-C console port. This port allows you to connect to the switch directly with a console cable and access the boot loader menu, where you can see the available OS images and the ServiceOS for recovery and troubleshooting purposes.

NEW QUESTION # 101

What is used by network devices to send error and operational information related to IP communications?

- A. Frame Check Sequence (FCS)
- B. Cyclic Redundancy Check (CRC)

- C. Internet Control Message Protocol (ICMP)
- D. User Datagram Protocol (UDP)

Answer: C

Explanation:

ICMP (Internet Control Message Protocol) is used by network devices to send error and operational information related to IP communications. It is used to send messages like "destination unreachable" or "time exceeded" when there are issues in IP communication
