

LEED-AP-BD-C Simulationsfragen - LEED-AP-BD-C German

P.S. Kostenlose 2025 USGBC LEED-AP-BD-C Prüfungsfragen sind auf Google Drive freigegeben von Zertpruefung verfügbar:
https://drive.google.com/open?id=19e5cbTYFfO5jjXRr5B_kpza0mnO4qS0a

Prüfungsfragen und Antworten zur LEED-AP-BD-C Zertifizierung verändern sich immer wegen der Entwicklung der IT-Technik. Deshalb sind Dumps von Zertpruefung immer aktualisiert. Und wenn sie die Prüfungsunterlagen zur USGBC LEED-AP-BD-C Zertifizierung von Zertpruefung kaufen, bietet Zertpruefung Ihnen einjährigen kostenlosen Aktualisierungsservice. Solange die exam Fragen aktualisiert sind, werden wir Ihnen die neuesten LEED-AP-BD-C Prüfungsmaterialien senden. Damit können Sie jederzeit die neueste Version haben. Zertpruefung kann sowohl Ihnen helfen, die Prüfung zu bestehen, als auch die neuesten Kenntnisse zu beherrschen. Verpassen Sie bitte nicht preiswerte Unterlagen.

USGBC LEED-AP-BD-C Prüfungsplan:

Thema	Einzelheiten
Thema 1	• Location and Transportation: This topic measures the skills of LEED Green Associates in sustainable development. It addresses critical factors in site selection, including development constraints and opportunities related to environmental considerations, and community connectivity concepts, such as walkability and street design, which are vital for promoting sustainable transportation options.

Thema 2	• Energy and Atmosphere: In this topic, LEED Green Associates focuses on building reuse, including historic building renovations. It covers material reuse strategies, enclosure materials, and permanently installed interior components into new designs.
Thema 3	• Building Loads: This topic is focused on optimizing building performances through effective load management. It addresses design considerations such as building orientation and glazing selection while clarifying regional factors that influence these decisions.
Thema 4	• Project Surroundings and Public Outreach: LEED Green Associates learn about promoting sustainable practices, regional design considerations that incorporate green construction measures, cultural awareness issues related to historic or heritage impacts, and ensuring that sustainability efforts are respectful of local values.
Thema 5	• Indoor Water Use Reduction: This section measures the skills of LEED Green Associates in minimizing indoor water consumption to reduce water use effectively, including toilets, urinals, faucets, and showerheads. Additionally, candidates will examine appliance types that consume water, such as cooling towers and washing machines.
Thema 6	• LEED Process: This topic tests the skills of LEED Green Associates involved in green building initiatives. It focuses on various methods to achieve LEED goals, such as developing credit interpretation rulings and utilizing Regional Priority Credits to explore synergies within the LEED system.
Thema 7	• Sustainable Sites: It covers site assessment and planning that involves evaluating various site characteristics, such as topography, hydrology, climate, vegetation, and soil conditions. It also covers assessing a site's potential as a resource for energy flows while addressing construction activity pollution prevention measures.
Thema 8	• Integrative Strategies: It emphasizes the importance of an integrative process. The topic also covers their knowledge about the value of teamwork in developing integrative green strategies and how they can collaborate throughout different project phases.
Thema 9	• Indoor Environmental Quality: This domain measures the skills of LEED Green Associates in creating healthy indoor environments. It emphasizes the importance of maintaining adequate ventilation levels through both natural and mechanical means. Additionally, candidates will be assessed on topics such as tobacco smoke control measures.

Valid LEED-AP-BD-C exam materials offer you accurate preparation dumps

Unsere USGBC LEED-AP-BD-C Prüfungsunterlage (LEED AP Building Design + Construction (LEED AP BD+C)) enthalten alle echten, originalen und richtigen Fragen und Antworten. Die Abdeckungsrate unserer USGBC LEED-AP-BD-C Unterlagen (Fragen und Antworten) (LEED AP Building Design + Construction (LEED AP BD+C)) ist normalerweise mehr als 98%.

USGBC LEED AP Building Design + Construction (LEED AP BD+C) LEED-AP-BD-C Prüfungsfragen mit Lösungen (Q22-Q27):

22. Frage

A project's total site area is 240,000 ft² (22 297 m²) and the building footprint is 40,000 ft² (3 716 m²). How much outdoor space and vegetated space must it provide to earn Sustainable Sites Credit, Open Space?

- A. 72,000 ft² (6 689 m²) of outdoor space of which 60,000 ft² (5 574 m²) must be vegetated
- B. 60,000 ft² (5 574 m²) of outdoor space of which 50,000 ft² (4 645 m²) must be vegetated
- **C. 72,000 ft² (6 689 m²) of outdoor space of which 18,000 ft² (1 672 m²) must be vegetated**
- D. 60,000 ft² (5 574 m²) of outdoor space of which 15,000 ft² (1 394 m²) must be vegetated

Antwort: C

Begründung:

According to the LEED v4 Reference Guide for Building Design and Construction, the project must provide outdoor space that is at least 30% of the total site area (including the building footprint), of which at least 25% must be vegetated. In this case, the project must provide $0.3 \times 240,000 \text{ ft}^2 = 72,000 \text{ ft}^2$ (6 689 m²) of outdoor space, of which $0.25 \times 72,000 \text{ ft}^2 = 18,000 \text{ ft}^2$ (1 672 m²) must be vegetated. Therefore, option C is the correct answer. Reference: LEED v4 Reference Guide for Building Design and Construction, p. 5411

23. Frage

Which of the following would be most useful to a school project that is attempting to pursue Water Efficiency Credit, Indoor Water Use Reduction?

- A. A standard garbage disposal
- **B. Commercial dishwasher that is ENERGY STAR labeled or performance equivalent**
- C. Electronic submeter at the domestic water supply pipe to the building
- D. An open-loop HVAC system that discharges potable cooling water to a nearby lake

Antwort: B

Begründung:

Explanation

The Water Efficiency Credit, Indoor Water Use Reduction aims to reduce indoor water consumption by installing water-efficient fixtures and fittings, such as faucets, showerheads, toilets, and urinals¹. A commercial dishwasher that is ENERGY STAR labeled or performance equivalent would help reduce the water use for dishwashing, which is one of the process water uses included in the credit calculation². A standard garbage disposal would not reduce water use, but rather increase it. An electronic submeter at the domestic water supply pipe to the building would help measure and monitor water use, but not directly reduce it. An open-loop HVAC system that discharges potable cooling water to a nearby lake would waste a lot of water and potentially harm the environment.

24. Frage

Where must a building's no-smoking signage be posted?

- A. Within 10 ft. (3 m) of all building entrances
- B. Within 25 ft. (8 m) of the main building entrance(s)
- **C. Within 25 ft. (8 m) of all building entrances**
- D. Within 10 ft. (3 m) of the main building entrance(s)

Antwort: C

Begründung:

Explanation

This is the requirement for the Indoor Environmental Quality prerequisite Environmental Tobacco Smoke Control, which applies to all LEED BD+C rating systems. The intent is to prevent or minimize exposure of building occupants, indoor surfaces, and ventilation air distribution systems to environmental tobacco smoke.

The no-smoking signage must explicitly state the 25 ft. (8 m) limit and communicate the no-smoking policy to occupants.

References: = [LEED v4: Building Design + Construction Guide], Indoor Environment Prerequisite: No Smoking within 25 Feet of Building, Non-smoking policy + signage. Message has links.

25. Frage

Showers are addressed under which prerequisites and/or credits within LEED Building Design and Construction?

- A. Water Efficiency Prerequisite, Indoor Water Use Reduction; Water Efficiency Credit, Cooling Tower Water Use; and Water Efficiency Credit, Water Metering
- B. Water Efficiency Prerequisite, Indoor Water Use Reduction; Water Efficiency Prerequisite, Outdoor Water Use Reduction; and Water Efficiency Credit, Water Metering

- C. Water Efficiency Prerequisite, Indoor Water Use Reduction; Water Efficiency Prerequisite, Outdoor Water Use Reduction; and Location and Transportation Credit, Bicycle Facilities
- D. Water Efficiency Prerequisite, Indoor Water Use Reduction; Water Efficiency Credit, Indoor Water Use Reduction; and Location and Transportation Credit, Bicycle Facilities

Antwort: D

Begründung:

Showers are addressed under Water Efficiency (WE) Prerequisite: Indoor Water Use Reduction and Location and Transportation (LT) Credit: Bicycle Facilities. Showers in indoor water use reduction help minimize potable water consumption, while in the Bicycle Facilities credit, they support cycling commuters by providing end-of-trip facilities. The other options refer to credits or prerequisites unrelated to shower facilities.

26. Frage

In pursuit of the Materials and Resources Credit, Building Disclosure and Optimization - Sourcing of Raw Materials, Option 2. Leadership Extraction Practices, which of the following statements is true related to products purchased for temporary use (formwork, bracing and scaffolding) on the project?

- A. If any temporary wood materials are included in the calculation, all wood materials must be included in the calculation
- B. Only Forest Stewardship Council (FSC)-certified wood materials are included in the calculation; non-certified wood materials contribute to other credits
- C. FSC-certified wood materials purchased for more than one project can be applied to other projects seeking LEED Certification
- D. Temporary wood products cannot be included in the calculations

Antwort: D

Begründung:

Temporary wood products cannot be included in the calculations for the Materials and Resources Credit, Building Disclosure and Optimization - Sourcing of Raw Materials, Option 2. Leadership Extraction Practices. This is because the credit only applies to permanently installed building products, not to products purchased for temporary use on the project¹. The other options are false. If any temporary wood materials are included in the calculation, they must be excluded from the total value of permanently installed building products¹. Non-certified wood materials do not contribute to other credits, unless they meet other criteria such as recycled content or regional materials². FSC-certified wood materials purchased for more than one project cannot be applied to other projects seeking LEED certification, unless they are reused or salvaged materials³.
