LEED-Green-Associate Pdf Format | New LEED-Green-Associate Dumps Ebook

Passing the LEED-Green-Associate certification can prove that and help you realize your goal and if you buy our LEED-Green-Associate quiz prep you will pass the exam successfully. Our product is compiled by experts and approved by professionals with years of experiences. You can download and try out our laTest LEED-Green-Associate Quiz torrent freely before your purchase. Our purchase procedures are safe and our products are surely safe without any virus. After you purchase our LEED-Green-Associate exam guide is you can download the test bank you have bought immediately.

USGBC LEED Green Associate Exam Sample Questions (Q139-Q144):

NEW QUESTION # 139

A project that does not meet a prerequisite in one credit category

- A. may substitute a prerequisite from an alternative rating system
- B. must file a CIR
- C. forfeits all points in the same credit category
- D. does not qualify for certification

Answer: D

Explanation:

Explanation

LEED prerequisites are the minimum requirements that a project must meet in order to be eligible for LEED certification.

Prerequisites are mandatory for all projects and cannot be substituted or waived. If a project does not meet a prerequisite in one credit category, it does not qualify for certification, regardless of how many points it earns in other categories123.

A project that does not meet a prerequisite in one credit category does not forfeit all points in the same credit category, as points are awarded for meeting optional credits, not prerequisites. A project cannot file a CIR (Credit Interpretation Request) to seek clarification or exception for a prerequisite, as CIRs are only applicable for credits. A project cannot substitute a prerequisite from an alternative rating system, as prerequisites are specific to each rating system and reflect the minimum standards for that system

NEW QUESTION # 140

Which of the following is an Environmental Concern when referring to Energy and Atmosphere?

- A. Ventilation levels
- B. Occupant comfort
- C. Use of native species
- D. Resource depletion

Answer: D

Explanation:

Resource depletion is a major environmental concern related to energy use. The extraction and use of non- renewable energy resources (such as fossil fuels) can lead to their depletion over time. This is why strategies that reduce energy use or utilize renewable energy sources are important in green building practices. References: LEED Green Associate Candidate Handbook, U.S. Green Building Council resources

NEW QUESTION # 141

The intent of waste management in the Materials and Resources credit category is to

- A. specify the use of green materials
- B. increase the use of pre-consumer/post-consumer recycled content
- C. promote the use of rapidly renewable resources
- D. reduce the amount of waste and toxins hauled to landfills

Answer: D

NEW QUESTION # 142

What is the best way to prevent a building's indoor pollutant(s)?

- A. Eliminate or control pollutants at the source
- B. Monitor carbon dioxide
- C. Test for radon
- D. Remove any pollutants that enter the building

Answer: A

Explanation:

Explanation

The best way to prevent a building's indoor pollutant(s) is to eliminate or control pollutants at the source.

Indoor pollutants are substances or particles that can adversely affect the indoor air quality (IAQ) of a building and the health, comfort, and productivity of the occupants. Indoor pollutants can originate from various sources, such as building materials, furnishings, cleaning products, combustion appliances, outdoor air, or occupant activities. Eliminating or controlling pollutants at the source can prevent them from entering or spreading in the indoor environment, which can reduce the exposure and risk for the occupants. Some examples of source control strategies are: using low-emitting materials, installing local exhaust ventilation, sealing combustion appliances, implementing green cleaning practices, and prohibiting smoking¹³. References: LEED v4 Green Associate Candidate Handbook¹, EPA's Indoor Air Quality³

NEW QUESTION # 143

What is the process that is performed on existing buildings to identify and recognize system improvements that make the building more suitable for current use?

- A. Life-cycle assessment
- B. Retrocommissioning
- C. Fundamental Commissioning (Cx)
- D. Energy modeling

Answer: B

Explanation:

Explanation

Retrocommissioning is a process applied to existing buildings to ensure that they continue to perform optimally for the current use.

This process involves checking systems to see if they function as intended, making necessary repairs or improvements, and ensuring that building staff are trained in the operation and maintenance of systems. References: LEED Green Associate Candidate Handbook, U.S. Green Building Council resources

NEW QUESTION # 144

.....

Are you still worried about low wages? Are you still anxious to get a good job? Are you still anxious about how to get a LEED-Green-Associate certificate?
