The benefit of obtaining the LPI 010-160: Linux Essentials Certificate Exam, version 1.6 Exam Certification

- Above all, LPI helps Linux members and open-source communities improve their careers by offering professional certificates and tools. Furthermore, the Linux LPI guarantees that IT professionals increase their abilities in the global industry. First, Linux offers people, government bodies and even companies worldwide an open source of technology. It became the first

impartial certification organization in the world with its Linux Professional Institute (LPI). Furthermore, the primary aim of LPI is to provide as many possibilities for everyone through certifying open source abilities.

- The Linux Professional Institute (LPI) 010-160 certification worth a serious look as Linux is back on top as the most in-demand open source skill category, making it required knowledge for most entry-level open source careers, stated the 2018 Open Source Jobs Report from Dice and the Linux Foundation.
- The certification examination LPI Linux Essentials 010-160 plays an essential part in the creation of LPI Certification Professionals. The Linux 010-160 test is above all a beginning level examination which focuses on developing LPI technologies in the IT sector. Moreover, the Linux test 010-160 helps you to get the credential Linux Essentials from Linux Professional Institute (LPI). In addition, your CV will be valued in this certificate throughout the recruiting process.
- The Linux 010-160 test is an entrance level for individuals who wish to start their Linux careers. This examination also evaluates your Linux operating system and Linux command - line interface expertise.
- **010-160 exam dumps** aspirants find an edge over other counterparts while appearing for interview.

Lpi Linux Essentials Certificate Exam - version 1.6 Sample Questions (Q23-Q28):

NEW QUESTION # 23

Which of the following keys can be pressed to exit less?

- A. l
- **B. q**
- C. !
- D. e
- E. x

Answer: B

NEW QUESTION # 24

A directory contains the following files:

What would be the output of the following shell script?
for file in *.txt

- **A. A. txt**
- B. c.cav
- C. a b
- D. A.txt
- E. *.txt

Answer: A

Explanation:

b. txt

Explanation:

The shell script uses a for loop to iterate over the files that match the pattern *.txt in the current directory. The pattern *.txt means

any file name that ends with .txt, regardless of the case. The loop body simply prints the value of the variable file, which holds the name of the current file in each iteration. Therefore, the output of the shell script would be the names of the files that end with .txt, one per line. In this case, the files are A.txt and b.txt, so the output would be:

A .txt b.txt

This corresponds to option E. The other options are incorrect for the following reasons:

Option A: *.txt is not the output of the shell script, but the pattern that the loop uses to match the files. The shell expands the pattern to the actual file names before executing the loop.

Option B: a and b are not the names of the files, but the first characters of the file names. The loop prints the whole file name, including the extension.

Option C: c.cav is not a file that matches the pattern *.txt, because it has a different extension. The loop ignores files that do not end with .txt.

Option D: A.txt is only one of the files that matches the pattern *.txt, but not the only one. The loop prints both A.txt and b.txt.

NEW QUESTION # 25

Which of the following commands are used to get information on the proper use of ls? (Choose two correct answers.)

- A. man ls
- B. manual ls
- C. info ls
- D. usage ls
- E. option ls

Answer: A,C

NEW QUESTION # 26

What is defined by a Free Software license?

- A. Conditions for modifying and distributing the licensed software.
- B. Details of the technical documentation each contributor has to provide.
- C. The programming languages which may be used to extend the licensed program.
- D. Limits on the purposes for which the licensed software may be used.
- E. A complete list of libraries required to compile the licensed software.

Answer: A

Explanation:

A free software license is a notice that grants the recipient of a piece of software extensive rights to modify and redistribute that software. These actions are usually prohibited by copyright law, but the rights-holder (usually the author) of a piece of software can remove these restrictions by accompanying the software with a software license which grants the recipient these rights. Software using such a license is free software (or free and open-source software) as conferred by the copyright holder. Free software licenses grant users the freedom to use it for any purpose, study and change the source code and copy and redistribute the software with or without modifications. Free software must come with source code or provide access to it, while the freedom to redistribute includes the right to give away copies gratis as well as sell copies¹ Reference: 1: Free-software license - Wikipedia

NEW QUESTION # 27

Which of the following tar options handle compression? (Choose two correct answers.)

- A. -z2
- B. -bz
- C. -j
- D. -g
- E. -z

Answer: C,E

Explanation:

The tar command is used to create or extract compressed archive files that contain multiple files or directories. The tar command has the following syntax: tar [options] [archive-file] [file or directory...]. The options argument specifies how the tar command should

operate and what kind of compression should be used. The archive-file argument is the name of the archive file to be created or extracted. The file or directory argument is the name of one or more files or directories to be included in or extracted from the archive file.

The following are some of the common options for the tar command:

- c: create a new archive file.
- x: extract files from an existing archive file.
- t: list the contents of an archive file.
- v: show the progress of the operation.
- f: specify the name of the archive file.
- z: use gzip compression or decompression.
- j: use bzip2 compression or decompression.
- J: use xz compression or decompression.

The options -z and -j are used to handle compression with the tar command. The option -z uses the gzip program to compress or decompress the archive file, which usually has the extension .tar.gz or .tgz. The option -j uses the bzip2 program to compress or decompress the archive file, which usually has the extension .tar.bz2 or .tbz. Both gzip and bzip2 are popular compression programs that reduce the size of files by removing redundant or unnecessary information.

For example, to create a compressed archive file called backup.tar.gz that contains the files and directories in the current directory, the following command can be used:

```
tar -czvf backup.tar.gz .
```

To extract the files and directories from the archive file backup.tar.gz to the current directory, the following command can be used:

```
tar -xzf backup.tar.gz
```

To create a compressed archive file called backup.tar.bz2 that contains the files and directories in the current directory, the following command can be used:

```
tar -cjvf backup.tar.bz2 .
```

To extract the files and directories from the archive file backup.tar.bz2 to the current directory, the following command can be used:

```
tar -xjf backup.tar.bz2
```

The other options in the question are not related to compression. The option -bz is invalid, as there is no such option for the tar command. The option -g is used to create or update an incremental archive file, which only contains the files that have changed since the last backup. The option -z2 is also invalid, as there is no such option for the tar command. Reference:
