101-500 Vce Test Simulator & 101-500 Valid Exam Topics

SurePassExams provides the most up-to-date LPIC-1 Exam 101, Part 1 of 2, version 5.0 101-500 exam questions and practice material to assist you in preparing for the Lpi 101-500 exam. Our LPIC-1 Exam 101, Part 1 of 2, version 5.0 101-500 exam questions preparation material helps countless people worldwide in becoming certified professionals. Our LPIC-1 Exam 101, Part 1 of 2, version 5.0 101-500 Exam Questions are available in three simple formats, allowing customers to select the most appropriate option according to their needs.

The LPI 101-500 (LPIC-1 Exam 101, Part 1 of 2, version 5.0) certification exam is a professional certification program designed for IT professionals who want to gain advanced skills and knowledge in Linux systems administration. This is the first exam in the LPIC-1 certification program and is intended to validate the skills and knowledge required for basic Linux administration tasks. 101-500 Exam covers all aspects of Linux system administration, including installation and configuration, user and group management, file system management, network configuration, and security.

Lpi LPIC-1 Exam 101, Part 1 of 2, version 5.0 Sample Questions (Q86-Q91):

NEW QUESTION # 86

Which of the following commands prints a list of usernames (first column) and their primary group (fourth column) from the /etc/passwd file?

- A. `split -c 1,4 /etc/passwd`
- B. `fmt -f 1,4 /etc/passwd`
- C. `paste -f 1,4 /etc/passwd`
- D. `cut -d : -f 1,4 /etc/passwd`

Answer: D

Explanation:

The cut command is used to extract selected fields from each line of a file. The -d option specifies the delimiter that separates the fields, and the -f option specifies the fields to print. The /etc/passwd file contains information about the users on the system, and each field is separated by a colon (:). Therefore, cut -d : -f 1,4

/etc/passwd will print the first and fourth fields of each line, which are the username and the primary group ID respectively. The other commands are either invalid or do not perform the desired task. The fmt command is used to reformat paragraphs of text, but it does not have a -f option. The split command is used to split a file into smaller files, but it does not have a -c option. The paste command is used to merge lines of files, but it does not have a -f option. References:

NEW QUESTION # 87

The USB device filesystem can be found under /proc/ _____ /usb/. (Please fill in the blank with the single word only)

Answer:

Explanation:

bus

NEW QUESTION # 88

In compliance with the FHS, in which of the directories are man pages found?

- A. /var/pkg/man
- B. /usr/doc/
- C. /var/man
- **D. /usr/share/man**
- E. /opt/man

Answer: D

Explanation:

Explanation

According to the Filesystem Hierarchy Standard (FHS), the directory /usr/share/man contains manual pages for user commands, system calls, library functions, and other documentation¹. The other directories are either non-standard, deprecated, or used for different purposes. For example, /opt/man is used for manual pages for add-on application software packages¹, /usr/doc/ is an old location for documentation files that is no longer used², /var/pkg/man and /var/man are not defined by the FHS. NEW QUESTION # 89

Which of the following commands prints all files and directories within the /tmp directory or its subdirectories which are also owned by the user root? (Choose TWO correct answers.)

- A. find -path /tmp -uid root
- B. find -path /tmp -user root -print
- **C. find /tmp -user root -print**
- D. find /tmp -user root
- **E. find /tmp -uid root -print**

Answer: C,E

Explanation:

The find command is used to search for files and directories that match certain criteria. The -uid option specifies the numeric user ID of the owner of the file or directory, while the -user option specifies the name of the owner. The -print option prints the full file name of the matching file or directory to the standard output.

Therefore, both find /tmp -uid root -print and find /tmp -user root -print will print all files and directories within the /tmp directory or its subdirectories which are also owned by the user root. The other options are either invalid or do not perform the desired task. The

-path option matches the whole path name, not just the starting directory. The -print option is implied if no other action is specified, but it is good practice to include it for clarity. References:

NEW QUESTION # 90

How many fields are in a syntactically correct line of /etc/fstab?

- A. 0
- B. 1
- C. 2
- D. 3
- E. 4

Answer: E

Explanation:

A syntactically correct line of /etc/fstab must have six fields, separated by whitespaces or tabs. The fields are as follows:

* The device file, UUID or label or other means of locating the partition or data source.

* The mount point, which is the directory where the device is/will be mounted.

* The file system type, which specifies the type of the file system.

* The mount options, which are a comma-separated list of options that control how the file system is mounted and accessed.

* The dump flag, which is a number that indicates whether the file system should be backed up by the dump utility. This is an outdated method and should not be used.

* The fsck order, which is a number that indicates the order in which the file system should be checked by the fsck utility at boot time. A value of 0 means no check, a value of 1 means the root file system, and a value of 2 or higher means other file systems.

For example, a line of /etc/fstab could look like this:

UUID=80b496fa-ce2d-4dcf-9afc-bcaa731a67f1 /mnt/example ext4 defaults 0 2 This means that the file system with the UUID 80b496fa-ce2d-4dcf-9afc-bcaa731a67f1 is mounted on /mnt

/example, has the type ext4, uses the default mount options, is not backed up by dump, and is checked by fsck after the root file system
