You can make decisions after careful consideration. It is up to you to make a decision. And after you finish the 101-500 exam questions, the scores will show out right away.

Lpi 101-500 certification exam is a multiple-choice exam that consists of 60 questions. 101-500 exam is designed to test the candidate's knowledge of Linux concepts, including system architecture, command-line usage, and file management. 101-500 Exam is administered in a proctored environment, which means that the candidate must take the exam in a controlled setting, such as a testing center or online proctoring service.

Lpi LPIC-1 Exam 101, Part 1 of 2, version 5.0 Sample Questions (Q128-

Q133):

NEW QUESTION # 128

In a networked environment, what command will grant anybody permission to display their X applications on a desktop? (Include both the command and argument(s).)

Answer:

Explanation:

xhost +

NEW QUESTION # 129

Which of the following commands makes /bin/foo executable by everyone but writable only by its owner?

- A. `chmod u=rwx,go=rx /bin/foo`
- B. `chmod 775 /bin/foo`
- C. `chmod 577 /bin/foo`
- D. `chmod o+rwx,a+rx /bin/foo`

Answer: A

NEW QUESTION # 130

Which SysV init configuration file is commonly used to set the default run level? (Specify the full name of the file, including path.)

Answer:

Explanation:

inittab

NEW QUESTION # 131

Which of the following commands is used to update the list of available packages when using dpkg based package management?

- A. `apt-cache upgrade`
- B. `apt-cache update`
- C. `apt-get upgrade`
- D. `apt-get refresh`
- E. `apt-get update`

Answer: E

Explanation:

The command that is used to update the list of available packages when using dpkg based package management is apt-get update¹². The apt-get command is a high-level tool that works with dpkg and provides a user-friendly interface for managing packages³. The apt-get update command is used to synchronize the package index files from the sources specified in the /etc/apt/sources.list file¹². This command does not install or upgrade any packages, but only downloads the information about the latest versions and dependencies of the packages¹². The apt-get update command is usually run before the apt-get upgrade or apt-get install commands, which are used to upgrade or install packages respectively¹².

The other options in the question are not correct because:

* B. apt-get upgrade: This command is used to upgrade the installed packages to the latest versions, not to update the list of available packages¹².

* C. apt-cache update: There is no such command in Linux. The apt-cache command is used to query and display information about the packages, not to update them⁴.

* D. apt-get refresh: There is no such command in Linux. The closest command is apt-get update, which is the correct answer.

* E. apt-cache upgrade: There is no such command in Linux. The closest command is apt-get upgrade, which is not the correct answer.
