We are sure that by preparing with updated our Scrum SSM exam questions you can get success and save both time and money.

Scrum SSM (SAFe 5 Scrum Master) Exam is a certification exam designed to assess the knowledge and skills of individuals who are seeking to become a certified Scrum Master. SSM exam is based on the latest version of the Scaled Agile Framework (SAFe) and is intended to validate the candidate's understanding of the principles and practices of Scrum at the enterprise level. The Scrum SSM Exam is a challenging and comprehensive test that requires candidates to demonstrate their proficiency in the areas of Scrum theory, practices, leadership, facilitation, and coaching.

Scrum SSM Exam consists of 45 multiple-choice questions, which must be completed within a time frame of 90 minutes. The passing score for the exam is 73%, which is equivalent to answering 33 out of the 45 questions correctly. SSM Exam is available in English, Japanese, and Simplified Chinese languages.

Scrum SSM exam is designed to test an individual's knowledge of the Scrum framework and their ability to apply it in real-world scenarios. SSM exam covers a range of topics, including the roles and responsibilities of the Scrum Master, the Scrum framework, Agile principles and values, and the various tools and techniques used in Scrum. It is a multiple-choice exam that consists of 45 questions and has a time limit of 90 minutes.

Scrum SSM (6.0) - SAFe® Scrum Master Sample Questions (Q72-Q77):

NEW QUESTION # 72

During PI Planning, the Scrum of Scrums meetings helps accomplish which two actions? (Choose two.)

- A. Keeping the planning milestones on track

- B. Comparing velocities across the teams
- C. Looking for ways to increase team velocity
- D. Exposing risks, impediments, and dependencies
- E. Rolling up the PI Business Value objectives

Answer: A,D

NEW QUESTION # 73

What can a Scrum Master/Team Coach recommend to a team that is showing signs of burnout, not addressing increasing technical debt, and acting out of urgency rather than considering innovation?

- A. A constructive IP Iteration at the end of each PI
- B. A careful plan at the beginning of each Iteration
- C. A communicative retrospective at the end of each Iteration
- D. A collective Iteration Review and demo each Iteration

Answer: A

Explanation:

A constructive IP Iteration is one of the recommended practices for Scrum Masters/Team Coaches to help teams avoid burnout, address technical debt, and foster innovation. An IP Iteration is a unique, dedicated iteration that occurs every PI and provides an estimating buffer for meeting PI Objectives and dedicated time for innovation, continuing education, PI Planning, and Inspect and Adapt events. During the IP Iteration, teams can work on activities such as hackathons, research and design, spikes, refactoring, automation, training, and other improvement initiatives that are difficult to fit into a continuous, incremental value delivery pattern. An IP Iteration also allows teams to prepare for and participate in the PI Planning and Inspect and Adapt events, which are essential for alignment, collaboration, and learning across the ART. A constructive IP Iteration can improve the predictability and flow of value delivery, increase employee engagement and satisfaction, enhance the agility and resilience of the teams, and create a competitive advantage for the enterprise. NEW QUESTION # 74

Agile Release Trains are organized around the ability to release value on demand through the _____.

- A. Please note down your answer

Answer: A

Explanation:

Explanation/Reference:

Continuous Delivery Pipeline

NEW QUESTION # 75

What is one anti-pattern of the Inspect and Adapt?

- A. Not enough preparation goes into the quantitative and qualitative measurement section
- B. Product Managers lead the problem-solving workshop
- C. Product Owners present all of the work in the PI System Demo
- D. Too many teams present Enablers and technical debt

Answer: A

Explanation:

In SAFe, the Inspect and Adapt (I&A) event is critical for enabling relentless improvement at the Agile Release Train (ART) level. It consists of three parts: the PI System Demo, quantitative and qualitative measurement, and a problem-solving workshop.

An important anti-pattern during I&A is when not enough preparation goes into the quantitative and qualitative measurement section.

Without proper preparation-such as collecting team metrics, business value achievement data, and feedback-the event loses its empirical foundation. Teams may focus only on anecdotal issues instead of addressing measurable trends or root causes. The I&A relies on meaningful metrics to guide discussion, measure performance, and identify systemic improvements. Poor preparation in this section weakens the effectiveness of the event and prevents data-driven decision-making. From SAFe guidance:

"The I&A event requires preparation of quantitative and qualitative data. Insufficient preparation reduces the quality of the session and limits learning." Thus, the correct answer is D. Not enough preparation goes into the quantitative and qualitative measurement section.

NEW QUESTION # 76

How can learning milestones be used?

- A. To mark events such as trade shows and product announcements
- B. To meet release dates set by external business partners
- C. To test the concept of a new feature or capability
- D. To meet contractually binding dates for delivery of value

Answer: C

NEW QUESTION # 77

.....
