

Make Exam Preparation Simple BootcampPDF Real Confluent CCAAK Exam Questions

DOWNLOAD the newest BootcampPDF CCAAK PDF dumps from Cloud Storage for free: <https://drive.google.com/open?id=1whHYXlqsond1Yxnfwwf8Mnca8pplLa4L>

You can land your ideal job and advance your career with the Confluent CCAAK certification. Success in the Confluent CCAAK exam verifies your talent to perform crucial technical tasks. Preparation for this Confluent CCAAK exam is a tricky task. Make sure you choose the top-notch Confluent CCAAK Study Materials to get ready for this exam. For your smooth CCAAK test preparation, BootcampPDF provides updated CCAAK practice material with a success guarantee.

Confluent CCAAK Exam Syllabus Topics:

Topic	Details
Topic 1	• Apache Kafka® Cluster Configuration: This section of the exam measures skills of a Kafka Administrator and includes configuring broker properties, tuning for performance, managing topic-level settings, and applying best practices for production-grade environments.
Topic 2	• Kafka Connect: This section of the exam measures skills of a Site Reliability Engineer and addresses the use and management of Kafka Connect for data integration. It includes setting up connectors, managing configurations, and ensuring efficient movement of data between Kafka and external systems.
Topic 3	• Observability: This section of the exam measures skills of a Site Reliability Engineer and focuses on monitoring Kafka clusters. It assesses knowledge of metrics, logging, and alerting tools, including how to use them to maintain cluster health and performance visibility.
Topic 4	• Troubleshooting: This section of the exam measures skills of a Kafka Administrator and includes diagnosing common issues in Kafka clusters. It covers problem areas such as performance bottlenecks, message delivery failures, replication issues, and consumer lag, along with techniques to resolve them effectively.

Topic 5	• Apache Kafka® Security: This section of the exam measures skills of a Site Reliability Engineer and focuses on securing Kafka environments. It includes authentication mechanisms such as TLS and SASL, authorization using ACLs, and encrypting data at rest and in transit to ensure secure communication and access control.
Topic 6	• Deployment Architecture: This section of the exam measures skills of a Kafka Administrator and covers different Kafka deployment topologies. It evaluates understanding of high availability, disaster recovery, multi-data center replication, and the roles of Zookeeper or KRaft in the cluster architecture.

Get Confluent CCAAK Exam Questions For Quick Preparation [2025]

You can learn CCAAK quiz torrent skills and theory at your own pace, and you are not necessary to waste your time on some useless books or materials and you will save more time and energy that you can complete other thing. We also provide every candidate who wants to get certification with free Demo to check our materials. It is time for you to realize the importance of our CCAAK Test Prep, which can help you solve these annoyance and obtain a CCAAK certificate in a more efficient and productive way.

Confluent Certified Administrator for Apache Kafka Sample Questions (Q52-Q57):

NEW QUESTION # 52

What is the correct permission check sequence for Kafka ACLs?
What is the correct permission check sequence for Kafka ACLs?

- A. Super Users -> Deny ACL -> Allow ACL -> Deny
- B. Deny ACL -> Deny -> Allow ACL -> Super Users
- **C. Super Users -> Allow ACL -> Deny ACL-> Deny**
- D. Allow ACL -> Deny ACL -> Super Users -> Deny

Answer: C

Explanation:

Kafka checks permissions in the following sequence:

1. Super Users: If the user is a super user (defined via super.users), access is granted immediately.
2. Allow ACL: If there is a matching Allow ACL, Kafka proceeds to the next step.
3. Deny ACL: If there is a matching Deny ACL, access is denied (even if an Allow exists).
4. Deny: If no matching ACLs are found, access is denied by default.

This order ensures that super users bypass ACLs, denials override allows, and default is deny.

NEW QUESTION # 53

A Kafka administrator notices that their consumers of Topic X are starting to fall behind. The administrator sees that Topic X has four partitions, and the consumer group has two consumers.

Which change can increase the performance of the Consumer Group?

- A. Decrease the consumer acknowledgment property to increase throughput.
- **B. Increase the number of consumers in the consumer group.**
- C. Increase the partitions in Topic X.
- D. Create a new consumer group for Topic X containing two (2) consumers.

Answer: B

Explanation:

With 4 partitions and only 2 consumers, some consumers are handling multiple partitions, which may cause lag if processing is slow. By increasing the number of consumers in the group (up to 4), Kafka can assign one partition per consumer, improving parallelism

and throughput.

NEW QUESTION # 54

A developer is working for a company with internal best practices that dictate that there is no single point of failure for all data stored.

What is the best approach to make sure the developer is complying with this best practice when creating Kafka topics?

- A. Use the parameter `--partitions=3` when creating the topic.
- B. Make sure the topics are created with `linger.ms=0` so data is written immediately and not held in batch.
- C. Set the topic replication factor to 3.
- D. Set `'min.insync.replicas'` to 1.

Answer: C

Explanation:

Replication factor determines how many copies of each partition exist across different brokers. A replication factor of 3 ensures that even if one or two brokers fail, the data is still available, thus eliminating a single point of failure.

NEW QUESTION # 55

A Kafka cluster with three brokers has a topic with 10 partitions and a replication factor set to three. Each partition stores 25 GB data per day and data retention is set to 24 hours.

How much storage will be consumed by the topic on each broker?

- A. 250 GB
- B. 300 GB
- C. 75 GB
- D. 750 GB

Answer: B

Explanation:

$10 \text{ partitions} \times 25 \text{ GB/day} = 250 \text{ GB total per day for the topic (primary data)}$.

With a replication factor of 3, there are 3 full copies of the data: $250 \text{ GB} \times 3 = 750 \text{ GB total across the entire cluster}$.

The cluster has 3 brokers, and Kafka tries to distribute replicas evenly among them: $750 \text{ GB} \div 3 \text{ brokers} = 250 \text{ GB per broker on average}$.

However, due to replication, some partitions have leaders and followers, so there's some overlap and not-perfect distribution. Each broker stores approximately $\frac{2}{3}$ of the total topic data (since each broker holds replicas for around $\frac{2}{3}$ of the partitions).

$\frac{2}{3} \times 750 \text{ GB} = 500 \text{ GB}$, but this is shared, so each broker ends up storing ~300 GB of replicated data, including its share of leaders and followers.

NEW QUESTION # 56

Which secure communication is supported between the REST proxy and REST clients?

- A. MD5
- B. Kerberos
- C. TLS (HTTPS)
- D. SCRAM

Answer: C

NEW QUESTION # 57

.....

Our after sales services are also considerate. If you get any questions with our CCAAK guide question, all helps are available upon request. Once you place your order this time, you will enjoy and experience comfortable and convenient services immediately. Besides, we do not break promise that once you fail the CCAAK Exam, we will make up to you and relieve you of any loss.

Providing with related documents, and we will give your money back. We have been always trying to figure out how to provide warranty service if customers have questions with our CCAAK real materials.
