

Managing-Cloud-Security Test Questions Answers, Vce Managing-Cloud-Security Free

WGU D320 MANAGING CLOUD SECURITY NEW EXAM QUESTIONS AND CORRECT ANSWERS 2025-2026!!

What type of PaaS storage would a set of Website files, or Multimedia objects use?

- A) Object
 - B) Unstructured
 - C) Volume
 - D) Structured
- B

A standard used for a common format to exchange information in a Federated Identity is in which format below?

- A) XML
 - B) SAML
 - C) HTML
 - D) JSON
- B

What does the software-defined networking abstract from the traffic forwarding?

- A) Routing
- B) Session
- C) filtering

We will have a dedicated specialist to check if our Managing-Cloud-Security learning materials are updated daily. We can guarantee that our Managing-Cloud-Security exam question will keep up with the changes by updating the system, and we will do our best to help our customers obtain the latest information on learning materials to meet their needs. If you choose to purchase our Managing-Cloud-Security quiz torrent, you will have the right to get the update system and the update system is free of charge. We do not charge any additional fees. Once our Managing-Cloud-Security Learning Materials are updated, we will automatically send you the latest information about our Managing-Cloud-Security exam question. We assure you that our company will provide customers with a sustainable update system.

In the complicated and changeable information age, have you ever been tried hard to find the right training materials of Managing-Cloud-Security exam certification? We feel delighted for you to find Prep4sureGuide, and more delighted to find the reliable Managing-Cloud-Security Exam Certification training materials. It will help you get your coveted Managing-Cloud-Security exam certification.

Vce Managing-Cloud-Security Free | Latest Managing-Cloud-Security Exam Questions Vce

The more you practice with our Managing-Cloud-Security practice materials, the more compelling you may feel. Even if you are lack of time, these Managing-Cloud-Security practice materials can speed up your pace of review. Our Managing-Cloud-Security practice materials are motivating materials especially suitable for those exam candidates who are eager to pass the exam with efficiency. Our Managing-Cloud-Security practice materials have inspired millions of exam candidates to pursuit their dreams and motivated them to learn more high-efficiently.

WGU Managing Cloud Security (JY02) Sample Questions (Q24-Q29):

NEW QUESTION # 24

In most redundant array of independent disks (RAID) configurations, data is stored across different disks. Which method of storing data is described?

- A. Archiving
- B. Mapping
- C. Crypto-shredding
- **D. Striping**

Answer: D

Explanation:

The method described is striping, which is a technique used in RAID configurations to improve performance and distribute risk. Striping involves splitting data into smaller segments and writing those segments across multiple disks simultaneously. For example, if a file is divided into four parts, each part is written to a separate disk in the RAID array. This parallelism enhances input/output (I/O) performance because multiple drives can be accessed at once. It also provides resilience depending on the RAID level. While striping by itself (RAID 0) increases performance but not redundancy, when combined with mirroring or parity (e.g., RAID 5 or RAID 10), it offers both speed and fault tolerance. The purpose of striping in the data management context is to optimize how data is stored, accessed, and protected. It is fundamentally different from archiving, mapping, or crypto-shredding, as those serve different objectives (long-term storage, logical placement, or secure deletion). Striping is central to high-performance storage systems and supports availability in mission-critical environments.

NEW QUESTION # 25

Which section of a contract includes the customer's right to audit the vendor to verify whether the vendor is fulfilling its contractual obligations?

- **A. Assurance**
- B. Termination
- C. Litigation
- D. Indemnification

Answer: A

Explanation:

The Assurance section of a contract specifies the customer's rights to verify that the vendor is meeting contractual and compliance obligations. This often includes the right to audit, request independent certifications, or require compliance reports such as SOC 2 or ISO 27001.

Indemnification deals with liability coverage, termination outlines exit conditions, and litigation describes dispute resolution mechanisms. None of these provide the customer with ongoing oversight rights.

Audit rights are critical in cloud contracts to maintain transparency, enforce accountability, and verify that shared responsibility is being upheld. Assurance provisions give customers confidence in the provider's security and operational practices, ensuring compliance with industry regulations.

NEW QUESTION # 26

Which group should be notified for approval when a planned modification to an environment is scheduled?

- **A. Change management board**
- B. Problem management team
- C. Executive management board
- D. Event management team

Answer: A

Explanation:

The Change Management Board (CMB), also called the Change Advisory Board (CAB), is the formal authority responsible for reviewing, assessing, and approving planned modifications to IT environments. This group ensures that proposed changes align with business objectives, do not introduce unnecessary risks, and comply with security and regulatory requirements.

Event management teams focus on monitoring events, problem management teams handle root-cause analysis, and executive boards provide strategic direction but are not operational approval authorities. Only the CMB has the explicit role of validating technical and security implications before implementation.

By involving the CMB, organizations enforce structured governance, minimize disruptions, and establish accountability. This practice is central in ITIL and ISO/IEC 20000 standards, ensuring that operational integrity and security are preserved during change cycles.

NEW QUESTION # 27

After selecting a new vendor, what should an organization do next as part of the vendor onboarding process?

- A. It should terminate the relationship with the vendor and dissolve technical agreements, data transfers, and other connections with the vendor.
- B. It should evaluate and determine whether the vendor meets the organization's requirements by evaluating its security policies.
- **C. It should confirm contractual details and arrange other details such as technical agreements, data transfers, and encryption standards with the vendor.**
- D. It should monitor the practices of the vendor by performing audits and confirming that the vendor is meeting its contractual agreements.

Answer: C

Explanation:

Once a vendor has been chosen, the onboarding phase requires confirming contractual details and arranging technical agreements. This includes specifying encryption standards, data transfer methods, SLAs, and compliance responsibilities. These discussions establish a clear foundation for the partnership.

Auditing and monitoring occur later, during ongoing vendor management. Evaluating requirements and policies occurs earlier, during vendor selection. Terminating a relationship is an offboarding activity, not onboarding.

Clarifying technical and contractual details at onboarding ensures a secure, compliant, and efficient partnership. It reduces risks of miscommunication and enforces accountability from the beginning.

NEW QUESTION # 28

An organization is evaluating which cloud computing service model it should implement. It is considering either platform as a service (PaaS) or software as a service (SaaS). Which risk associated with SaaS can the organization avoid by choosing PaaS?

- A. Personnel threat
- B. Natural disaster
- C. Vendor lock-out
- **D. Vendor lock-in**

Answer: D

Explanation:

With SaaS, applications are delivered entirely by the provider, and customers have little to no control over the underlying platform or data portability. This creates a higher risk of vendor lock-in, as migrating away from one SaaS provider to another may require reworking applications or losing features.

In contrast, PaaS gives customers more flexibility by allowing them to build, deploy, and manage their own applications while relying on standardized frameworks and platforms. Because applications are customer-managed, switching providers or migrating workloads can be easier compared to SaaS.

Vendor lock-out, personnel threats, and natural disasters are risks in any service model. The key differentiator here is portability and flexibility. Choosing PaaS reduces dependence on a single provider's application features, thereby lowering vendor lock-in risk while still offloading infrastructure management.

NEW QUESTION # 29

.....

With all Managing-Cloud-Security practice materials being brisk in the international market, our Managing-Cloud-Security practice materials are quite catches with top-ranking quality. But we do not stop the pace of making advancement by following the questions closely according to exam. So our experts make new update as supplementary updates. During your transitional phrase to the ultimate aim, our Managing-Cloud-Security practice materials as well as these updates are referential. Those materials can secede you from tremendous materials with least time and quickest pace based on your own drive and practice to win. Those updates will be sent to you accordingly for one year freely.
