Manufacturing-Cloud-Professional Reliable Study Guide & Manufacturing-Cloud-Professional Valid Real Exam

The VerifiedDumps is one of the top-rated and renowned platforms that has been offering real and valid Manufacturing Cloud Accredited Professional Exam (Manufacturing-Cloud-Professional) exam practice test questions for many years. During this long time period countless Manufacturing Cloud Accredited Professional Exam (Manufacturing-Cloud-Professional) exam candidates have passed their dream certification and they are now certified Salesforce professionals and pursuing a rewarding career in the market.

Salesforce Manufacturing Cloud Accredited Professional Exam Sample Questions (Q39-Q44):

NEW QUESTION # 39

The Salesforce administrator at a small manufacturer of fasteners for the automobile industry is configuring Manufacturing Cloud. The sales operations manager wants accurate data so they can compare projected parts sales to actual orders. The manufacturer currently manages orders and contracts in an external system (SAP).

Which actuals calculation option should the administrator select to achieve the manager's request?

- A. Automatically from orders through contracts
- B. Manually using API upload
- C. Automatically from direct orders

Answer: B

Explanation:

For a manufacturer managing orders and contracts in an external system like SAP, the administrator should select the option to manually use API upload. This allows for the bulk upload of updated quantities at regular intervals through integration, which the Salesforce org picks up during a daily scheduled job to update sales agreements.

NEW QUESTION # 40

When list views are selected for account forecasts, which two permissions options may be based on the list view so the Account managers can generate forecasts?

- A. All users above hierarchy can see this list views
- B. Share list view with group of users
- C. All users can see the list views
- D. Share list view with account owners

Answer: B,C

Explanation:

Explanation

List views for account forecasts are used to filter the accounts that are included in the forecast calculations. By default, only the accounts that are owned by the user or are shared with the user are considered for the forecast. However, an admin can create and share list views with a group of users, such as account managers, to allow them to generate forecasts based on the accounts in the list view. This way, the admin can control which accounts are relevant for the forecast and which users can access them. The other options are not valid for account forecasts, as they either make the list view visible to all users, which defeats the purpose of filtering, or they limit the visibility to account owners or users above the hierarchy, which may exclude some users who need to see the forecast. NEW QUESTION # 41

What out-of-the-box Manufacturing Cloud function can be used to notify users if automated processes fail?

- A. Email Notifications
- B. Automated Processes Status report
- C. Manufacturing Cloud Home Page Notifications related
- D. Automated Processes Notifications

Answer: A

Explanation:

Email notifications are an out-of-the-box Manufacturing Cloud function that can be used to notify users if automated processes fail. Automated processes are workflows, processes, or Apex triggers that update records based on certain criteria or events. If an automated process fails, Salesforce sends an email to either the admin who last modified the associated flow or the Apex exception email recipients. The email includes the data that's involved in the process or flow, including user-entered data, and the error message that caused the failure. You can configure the email recipients and the email content in the Process Automation Settings page in Setup. References: = Select Flow and Process Error Email Recipients, Troubleshoot Flow Errors

NEW QUESTION # 42

When discussing the business requirements for a Manufacturing Cloud implementation design, what is a consideration when analyzing data in existing third-party systems?

- A. Determine the system of record for each data category required by the business.
- B. Identify the capabilities of different data integration tools.
- C. Define current processes required by the business.

Answer: A

Explanation:

Explanation

When designing a Manufacturing Cloud implementation, it is important to understand the data sources and systems that the business uses and relies on. Data integration is a key aspect of the solution, as it enables the synchronization of data across different systems and platforms. To ensure data quality and accuracy, it is essential to determine the system of record for each data category, such as accounts, contacts, products, orders, forecasts, etc. The system of record is the authoritative source of truth for a given data category, and it should be the primary source for creating, updating, and deleting data records. By identifying the system of record for each data category, the consultant can design the data integration strategy and avoid data duplication, inconsistency, and conflict.

NEW QUESTION # 43

Which three conditions need to be fulfilled so that an order is included in the Actuals calculation process on a Sales Agreement?

- A. The Sales Agreement field needs to be populated on the Order.
- B. The order needs to have Status = Activated.
- C. The order needs to have Category = Activated.
- D. The date in the Order Date field should be in the past.
- E. The date in the Order Date field should be in the future.

Answer: A,B,D

Explanation:

Explanation

To include an order in the Actuals calculation process on a Sales Agreement, the following conditions need to be fulfilled:

The order needs to have Status = Activated. This indicates that the order is confirmed and ready to be fulfilled.

The date in the Order Date field should be in the past. This ensures that the order is not a future projection but an actual transaction.

The Sales Agreement field needs to be populated on the Order. This links the order to the corresponding sales agreement that it belongs to. References:
