Pass Guaranteed 2025 CheckPoint 156-836: Check Point Certified Maestro Expert - R81 (CCME) Unparalleled New Exam Vce

Each format specializes in a specific study style and offers unique benefits, each of which is crucial to good Check Point Certified Maestro Expert - R81 (CCME) (156-836) exam preparation. The specs of each CheckPoint 156-836 Exam Questions format are listed below, you may select any of them as per your requirements.

CheckPoint Check Point Certified Maestro Expert - R81 (CCME) Sample Questions (Q86-Q91):

NEW QUESTION # 86
What is the default Distribution mode?

- A. Auto-topology
- B. User
- C. Network
- D. Manual-General

Answer: A

Explanation:
Auto-topology is the default distribution mode for Maestro Security Groups. In this mode, the Orchestrator assigns packets to a Security Group Member based on the topology of the port defined in the gateway object.
Each port is either in user mode or network mode depending on the topology. User mode means that the port is connected to the internal network and network mode means that the port is connected to the external network. The Orchestrator uses a hash function to map each source IP or destination IP to a specific SGM, depending on the mode of the port. This mode ensures that all packets with the same source IP or destination IP are processed by the same SGM, regardless of the port or protocol.

NEW QUESTION # 87
For the MHO-175, which ports are Management ports?

- A. Ports 49 - 55 are Management ports.
- B. Ports 27 - 47 are Management ports.
- C. Ports 5 - 26 are Management ports.
- D. Ports 1 - 4 are Management ports.

Answer: D

Explanation:
Explanation
According to the Port Mapping for the Check Point Maestro HyperScale Orchestrator MHO-175 document1, ports 1 - 4 are Management ports that are used to connect the MHO to the customer's management infrastructure, such as SmartConsole or SmartDomain Manager. Ports 5 - 26 are Uplink ports that are used to connect the MHO to the customer's network infrastructure, such as switches, routers, or firewalls. Ports 27 -
47 are Downlink ports that are used to connect the MHO to the Security Group Modules (SGMs) in the Security Group. Ports 49 -
55 are Backplane ports that are used to connect the MHO to another MHO in a Dual Orchestrator environment.

NEW QUESTION # 88
When working with Maestro, what is the difference between using Clish and gClish?

- A. Clish commands apply to all UP SG members, by default. gClish commands apply to all SG members, by default.
- B. Clish commands are run on the SG members. gClish commands are run on the MHO and applied to all connected SG members in a specified group.
- C. Clish commands apply only to a specific SG member. gClish commands apply to all UP SG members, by default.
- D. Clish commands are for testing purposes only and cannot be saved, gClish commands apply to all SG members, by default.

Answer: C

Explanation:
Explanation
This is the correct answer because it describes the difference between using Clish and gClish when working with Maestro. Clish is the Check Point command line shell that allows users to configure and manage the SG members individually. gClish is the global Clish that allows users to run commands on all UP SG members of the current Security Group at once. UP SG members are the ones that are in the UP state and have the same policy installed as the SMO Master.

NEW QUESTION # 89
What is the purpose of g_tcpdump command?

- A. Collects traffic dump from Sync network
- B. Collects traffic dump from all Active Appliances within Security Group
- C. Collects traffic dump from CIN network
- D. The same as tcpdump, just on Scalable Platform

Answer: B

Explanation:
Explanation
_tcpdump" probably collects traffic dumps from all active appliances within a security group, aligning with the naming convention and function of similar commands in scalable platforms.

NEW QUESTION # 90
What command should be used for collecting diagnostic information about the orchestrator?

- A. orch_info
- B. cpinfo
- C. cpview
- D. asg perf -v

Answer: B

Explanation:
The cpinfo command is a tool that collects diagnostic information about the orchestrator, such as hardware, software, network, configuration, and logs. The cpinfo command generates a file that can be sent to Check Point Support for analysis and troubleshooting. The cpinfo command can be run on the orchestrator's CLI or WebUI.
