

Marvelous 1Z0-1151-25 Exam Details–Pass 1Z0-1151-25 First Attempt

How to Pre-Order the products:

1. Click to "Add to Cart" & Follow the payment instructions
2. Our Expert will arrange real Exam Questions within 3 Days to 10 Days especially for you.
3. You will be notified within as soon as your Exam is ready with all Real Questions and Possible Answers in PDF & Practice Exam Software formats.

DOWNLOAD the newest BraindumpsVCE 1Z0-1151-25 PDF dumps from Cloud Storage for free:

Whether you are a student or a professional who has already taken part in the work, you must feel the pressure of competition now. However, no matter how fierce the competition is, as long as you have the strength, you can certainly stand out. It's not easy to become better. Our 1Z0-1151-25 exam questions can give you some help. After using our 1Z0-1151-25 Study Materials, you can pass the 1Z0-1151-25 exam faster and you can also prove your strength. Of course, our 1Z0-1151-25 study materials can bring you more than that. You will have a brighter future with the help of our 1Z0-1151-25 exam questions.

Oracle 1Z0-1151-25 Exam Syllabus Topics:

Topic	Details
Topic 1	• Implement Oracle Database@Google Cloud: This section measures the proficiency of Cloud Database Engineers in utilizing Oracle Database@Google Cloud. It explores the architecture and operational framework for running Oracle databases on Google Cloud. Candidates will learn about onboarding procedures, provisioning resources, and managing database services effectively to optimize performance and availability in a Google Cloud-integrated multi-cloud ecosystem.
Topic 2	• Introduction to Multicloud: This section of the exam measures the skills of Cloud Architects in understanding multicloud environments and their benefits. It covers the reasons organizations adopt multi-cloud strategies, including flexibility, cost optimization, and risk management. Candidates will learn about common multicloud use cases and how they are implemented in Oracle Cloud Infrastructure (OCI) to enhance interoperability and performance.
Topic 3	• Implement Oracle Database@Azure: This section tests the expertise of Database Solutions Architects in deploying and managing Oracle Database@Azure. It covers the architectural components and onboarding processes required for provisioning databases in Azure while maintaining Oracle's advanced database capabilities. Candidates will also focus on configuring high availability and disaster recovery strategies to ensure business continuity and data resilience in a multi-cloud setup.
Topic 4	• Configure Multicloud Connection Options: This section assesses the abilities of Network Engineers in configuring connectivity solutions for OCI multi-cloud environments. It includes setting up secure networking options such as Site-to-Site VPN and FastConnect for seamless cloud integration. Candidates will also learn how to implement Oracle Interconnect services for establishing direct, high-performance connections between OCI and third-party cloud providers like Microsoft Azure and Google Cloud.
Topic 5	• Core OCI Services Overview: This section evaluates the knowledge of Identity and Database Administrators in managing OCI's core services for multi-cloud integration. It covers the implementation of identity federation between OCI Identity Domains and external identity providers, ensuring secure authentication across multiple cloud environments. Candidates will also gain expertise in configuring Virtual Cloud Network (VCN) components and administering OCI database services, including Base Databases, Autonomous Databases, and HeatWave, to support scalable multi-cloud deployments.

Free Oracle 1Z0-1151-25 Brain Dumps | 1Z0-1151-25 Certification Exam Infor

The 1Z0-1151-25 learning materials are of high quality, mainly reflected in the adoption rate. As for our 1Z0-1151-25 exam question, we guaranteed a higher passing rate than that of other agency. More importantly, we will promptly update our 1Z0-1151-25 quiz torrent based on the progress of the letter and send it to you. 99% of people who use our 1Z0-1151-25 Quiz guide has passed the exam and successfully obtained their certificates, which undoubtedly show that the passing rate of our 1Z0-1151-25 exam question is 99%. So our product is a good choice for you. Choose our 1Z0-1151-25 learning materials, you will gain a lot and lay a solid foundation for success.

Oracle Cloud Infrastructure 2025 Multicloud Architect Professional Sample Questions (Q47-Q52):

NEW QUESTION # 47

What is the purpose of federating the Azure tenant's Microsoft Entra ID with an OCI identity domain?

- A. To specify an Azure Virtual Network (VNet) in Azure during provisioning
- B. To enable bi-directional communication between Azure and OCI
- **C. To allow Azure users to log in to the OCI Console using the same Azure credentials used for Azure**
- D. To specify an Azure Virtual Network (VNet) in Azure during provisioning

Answer: C

Explanation:

Federating Microsoft Entra ID (formerly Azure AD) with an OCI identity domain enables single sign-on (SSO), allowing Azure users to access the OCI Console with their existing Azure credentials. This enhances user experience and security in a multicloud setup. Options B and C (repeated in the original) relate to networking, not identity, and Option A is vague and incorrect. OCI's federation documentation outlines this SSO purpose clearly.

NEW QUESTION # 48

Which is a prerequisite for subscribing to Oracle Database@Azure?

- A. Private interconnect between OCI and Azure
- B. Custom Identity domain
- C. Linked Azure and Oracle Cloud Infrastructure account
- **D. An existing Azure subscription**

Answer: D

Explanation:

An existing Azure subscription is the foundational prerequisite for subscribing to Oracle Database@Azure, as the service is provisioned and billed through Azure. While a private interconnect (Option A) and linked OCI account (Option C) enhance functionality, they are not mandatory to initiate subscription-linking occurs post-subscription. A custom identity domain (Option D) is optional for federation but not a prerequisite. Oracle's subscription process documentation confirms this requirement.

NEW QUESTION # 49

What is the primary purpose of the Database Management service's Performance Hub in relation to OCI Databases?

- **A. Performance Hub offers detailed performance diagnostics, allowing analysis of SQL activity, identification of bottlenecks, and drill-down into individual queries.**
- B. Performance Hub provides automated backups and recovery for all OCI Database services.
- C. Performance Hub provides a centralized console for managing all aspects of OCI Database security.
- D. Performance Hub manages the patching and upgrading of database software for Base Databases.

Answer: A

Explanation:

Here's why:

Performance Hub is designed specifically for performance monitoring and tuning. It provides a rich set of tools and visualizations to help you understand database performance and identify areas for improvement. Key features include:

SQL Monitoring: Real-time monitoring of SQL activity, including execution plans, wait events, and resource consumption.

Performance Analysis: Identification of performance bottlenecks, such as long-running queries, high CPU usage, or I/O contention.

Drill-Down Capabilities: Ability to drill down into individual SQL statements to see detailed performance metrics and execution plans.

ASH Analytics: Integration with Active Session History (ASH) data to provide historical performance analysis and identify trends.

Why the other options are incorrect:

A). Performance Hub provides automated backups and recovery for all OCI Database services: Backups and recovery are managed by the database services themselves (e.g., Autonomous Database's automated backups, Base Database's backup and recovery tools), not by Performance Hub.

C). Performance Hub manages the patching and upgrading of database software for Base Databases: Patching and upgrades for Base Databases are typically handled using OCI's patching tools or by manual administration, not through Performance Hub. Autonomous Database handles its own patching automatically.

D). Performance Hub provides a centralized console for managing all aspects of OCI Database security: Security management is handled through OCI Identity and Access Management (IAM), database-specific security features (e.g., Transparent Data Encryption, Data Safe), and other security services, not through Performance Hub.

NEW QUESTION # 50

what is the first and essential resource that needs to be created before establishing the Partner Interconnect VLAN attachment?

- A. A Cross-Cloud Interconnect VLAN attachment.
- **B. A Google Cloud Router with the appropriate ASN.**
- C. A Shared VPC in Google Cloud.
- D. A Google Cloud Firewall Rule allowing BGP.

Answer: B

Explanation:

Before you can create a Partner Interconnect VLAN attachment, you must have a Cloud Router in your Google Cloud project. This Cloud Router is essential because:

BGP Peering: The Cloud Router is responsible for establishing BGP (Border Gateway Protocol) peering with the partner's network, which in turn connects to Oracle Cloud. The VLAN attachment provides the Layer 2 connectivity over which the BGP sessions run.

ASN (Autonomous System Number): The Cloud Router needs to be configured with your Google Cloud project's ASN (Autonomous System Number). This ASN is used in the BGP sessions to identify your network.

Why the other options are incorrect:

B). A Cross-Cloud Interconnect VLAN attachment. This option is incorrect because Partner Interconnect is the correct term for connecting with Oracle. Cross-Cloud Interconnect is used for connecting to other Google Cloud regions. Also, the VLAN attachment is created after the Cloud Router.

C). A Google Cloud Firewall Rule allowing BGP. While firewall rules are important for security, they are configured after the connection is established and the routing is working. The Cloud Router needs to exist first to even have a target for the firewall rules.

D). A Shared VPC in Google Cloud. Shared VPC is a Google Cloud organizational concept and is not directly related to establishing the Partner Interconnect connection itself. The interconnect works regardless of whether Shared VPC is used.

NEW QUESTION # 51

What is the next essential step on the Azure side to establish the connection after creating the FastConnect virtual circuit on the OCI side?

- A. Establish an IPsec VPN tunnel between the Azure VNet and the OCI VCN.
- **B. Create a Virtual Network Gateway of type "ExpressRoute" and establish a connection to the OCI FastConnect virtual circuit using the service key provided by Oracle.**
- C. Create an ExpressRoute circuit and configure a private peering.
- D. Configure a Network Virtual Appliance (NVA) for routing between the two cloud environments.

Answer: B

Explanation:

OCI Side: You create a FastConnect virtual circuit. Oracle provides you with a service key. This key is crucial for connecting from the Azure side.

Connecting the two: You use the service key provided by Oracle during the ExpressRoute Gateway configuration to link it to the FastConnect virtual circuit. This establishes the physical connection between the two cloud environments.

a) Create an ExpressRoute circuit and configure a private peering. While you do create an ExpressRoute circuit, simply creating it isn't enough to connect to the OCI FastConnect. You need the ExpressRoute Gateway to terminate the connection and the service key to authorize it. The private peering is configured after the connection is established.

c) Configure a Network Virtual Appliance (NVA) for routing between the two cloud environments. While NVAs can be used for advanced routing or security functions, they are not required for the basic establishment of the Interconnect. The direct connection through ExpressRoute and FastConnect handles the basic routing.
