

# Marvelous CAS-005 Latest Exam Question, CAS-005 Certification Exam Infor

BONUS!!! Download part of Dumpexams CAS-005 dumps for free: [https://drive.google.com/open?id=1dGDYzacSbz8\\_NXrzTYi-wyPLISWnZTNM](https://drive.google.com/open?id=1dGDYzacSbz8_NXrzTYi-wyPLISWnZTNM)

Success in the CompTIA CAS-005 exam paves the way toward high-paying jobs, promotions, and skills verification. Hundreds of CompTIA CAS-005 test takers do not get success because of using CompTIA CAS-005 outdated dumps. Due to failure, they lose money, time, and confidence. All these losses can be prevented by using updated and real CAS-005 exam.

It is known to us that passing the CAS-005 exam is very difficult for a lot of people. Choosing the correct study materials is so important that all people have to pay more attention to the study materials. If you have any difficulty in choosing the correct CAS-005 study braindumps, here comes a piece of good news for you. The CAS-005 prep guide designed by a lot of experts and professors from company are very useful for all people to pass the practice exam and help them get the CompTIA certification in the shortest time. If you are preparing for the practice exam, we can make sure that the CAS-005 Test Practice files from our company will be the best choice for you, and you cannot find the better study materials than our company'.

>> CAS-005 Latest Exam Question <<

## CAS-005 Certification Exam Infor & Valid CAS-005 Mock Test

First and foremost, our company has prepared CAS-005 free demo in this website for our customers. Second, it is convenient for you to read and make notes with our versions of CAS-005 exam materials. Last but not least, we will provide considerate on line after sale service for you in twenty four hours a day, seven days a week. So let our CAS-005 Practice Guide to be your learning partner in the course of preparing for the exam, it will be a wise choice for you to choose our CAS-005 study dumps.

## CompTIA SecurityX Certification Exam Sample Questions (Q97-Q102):

### NEW QUESTION # 97

An organization hires a security consultant to establish a SOC that includes a threat-modeling function. During initial activities, the consultant works with system engineers to identify antipatterns within the environment. Which of the following is most critical for the engineers to disclose to the consultant during this phase?

- A. A listing of unpatchable IoT devices in use in the data center
- B. Results from the most recent software composition analysis
- C. Results from the most recent infrastructure access review
- **D. Network and data flow diagrams covering the production environment**
- E. A current inventory of cloud resources and SaaS products in use

**Answer: D**

Explanation:

In the context of establishing a Security Operations Center (SOC) with a threat-modeling function, it's crucial to understand how data flows within the organization's systems. Network and data flow diagrams provide a visual representation of the system's

architecture, illustrating how data moves between components, which is essential for identifying potential security weaknesses and antipatterns. Antipatterns are common responses to recurring problems that are ineffective and risk-inducing. By analyzing these diagrams, the consultant can pinpoint areas where security controls may be lacking or misconfigured, thereby facilitating the development of effective threat models.

While other options like unpatchable IoT devices (Option B) and inventories of cloud resources (Option E) are important for comprehensive security assessments, they are more pertinent during later stages, such as vulnerability management and asset inventory. The initial phase of threat modeling focuses on understanding the system's structure and data flows to identify potential threats, making network and data flow diagrams the most critical information at this stage.

#### NEW QUESTION # 98

An auditor is reviewing the logs from a web application to determine the source of an incident. The web application architecture includes an internet-accessible application load balancer, a number of web servers in a private subnet, application servers, and one database server in a tiered configuration. The application load balancer cannot store the logs. The following are sample log snippets:

Web server logs:

192.168.1.10 - -

[24/Oct/2020 11:24:34 +05:00] "GET /bin/bash" HTTP/1.1" 200 453 Safari/536.36

192.168.1.10 - -

[24/Oct/2020 11:24:35 +05:00] "GET / HTTP/1.1" 200 453 Safari/536.36

Application server logs:

24/Oct/2020 11:24:34 +05:00 - 192.168.2.11 - request does not match a known local user. Querying DB

24/Oct/2020 11:24:35 +05:00 - 192.168.2.12 - root path. Begin processing Database server logs:

24/Oct/2020 11:24:34 +05:00

[Warning] 'option read\_buffer\_size1 unassigned value 0 adjusted to 2048

24/Oct/2020 11:24:35 +05:00

[Warning] CA certificate ca.pem is self-signed.

Which of the following should the auditor recommend to ensure future incidents can be traced back to the sources?

- A. Install a certificate signed by a trusted CA.
- B. Store the value of the `$_SERVER`
- C. Install a software-based HIDS on the application servers.
- D. Use stored procedures on the database server.
- E. Enable the X-Forwarded-For header at the load balancer.

**Answer: E**

Explanation:

['REMOTE\_ADDR'] received by the web servers.

Explanation:

The issue is tracing the original source of requests in a tiered architecture with a load balancer. The web server logs show internal IPs (192.168.1.10), not the external client IPs, because the load balancer forwards requests without preserving the source. Enabling the X-Forwarded-For header on the load balancer adds the client's original IP to the HTTP request headers, allowing downstream servers to log it. This ensures traceability without altering the architecture significantly.

Option A: Correct- X-Forwarded-For is the standard solution for preserving client IPs through load balancers.

Option B: A Host-based Intrusion Detection System (HIDS) detects anomalies but doesn't address IP traceability.

Option C: A trusted CA certificate fixes the self-signed warning but is unrelated to source tracking.

Option D: Stored procedures improve database security but don't help with IP logging.

Option E: Storing `$_SERVER`

['REMOTE\_ADDR'] captures the loadbalancer's IP, not the client's, unless X-Forwarded-For is enabled.

#### NEW QUESTION # 99

A company receives reports about misconfigurations and vulnerabilities in a third-party hardware device that is part of its released products. Which of the following solutions is the best way for the company to identify possible issues at an earlier stage?

- A. Performing vulnerability tests on each device delivered by the providers
- B. Performing regular red-team exercises on the vendor production line
- C. Implementing a monitoring process for the integration between the application and the vendor appliance
- D. Implementing a proper supply chain risk management program

**Answer: D**

### NEW QUESTION # 100

A company migrated a critical workload from its data center to the cloud. The workload uses a very large data set that requires computational-intensive data processing. The business unit that uses the workload is projecting the following growth pattern:

- \* Storage requirements will double every six months.
- \* Computational requirements will fluctuate throughout the year.
- \* Average computational requirements will double every year.

Which of the following should the company do to address the business unit's requirements?

- **A. Plan for a horizontally scaling computing and storage infrastructure.**
- B. Deploy a cloud-based CDN for storage and a load balancer for compute.
- C. Implement a load balancer for computing and storage resources.
- D. Combine compute and storage in vertically autoscaling mode.

**Answer: A**

Explanation:

SecurityX CAS-005 cloud architecture guidance emphasizes horizontal scaling for workloads that need to handle both predictable and fluctuating growth over time. Horizontal scaling allows the infrastructure to add nodes for both compute and storage dynamically, providing elasticity to meet fluctuating computational demands while accommodating exponential storage growth.

Vertical scaling (B) has hardware limits and is not as flexible for large, sustained growth.

CDN (A) is optimized for content distribution, not intensive compute workloads.

Load balancing (C) distributes workloads but does not address scaling for data growth.

### NEW QUESTION # 101

A compliance officer is facilitating a business impact analysis (BIA) and wants business unit leaders to collect meaningful data. Several business unit leaders want more information about the types of data the officer needs.

Which of the following data types would be the most beneficial for the compliance officer? (Select two)

- A. Contingency plans
- **B. Costs associated with downtime**
- C. Network diagrams
- D. Inventory details
- **E. Critical processes**
- **F. Applicable contract obligations**

**Answer: B,E,F**

Explanation:

Understanding Business Impact Analysis (BIA):

ABIA assesses the effects of disruption to an organization's operations.

It helps prioritize resources based on the potential impact of downtime, compliance issues, and critical processes.

Why Options B, C, and F are Correct:

B (Applicable contract obligations) → Many companies have legal and compliance obligations regarding downtime, availability, and SLAs. This information helps determine what risk levels are acceptable.

C (Costs associated with downtime) → BIA quantifies the financial impact of system failures. Knowing lost revenue, regulatory fines, and recovery costs helps in planning.

F (Critical processes) → Identifying core business processes allows an organization to prioritize recovery efforts and maintain operational continuity.

Why Other Options Are Incorrect:

A (Inventory details) → While useful for asset management, it does not directly impact business continuity planning.

D (Network diagrams) → These help in security architecture but are not directly related to the financial/business impact analysis.

E (Contingency plans) → BIA is performed before contingency planning to identify what needs protection.
