| Topic 1 | <ul style="list-style-type: none"><li>IT Architectures, Technologies, Standards: This section of the exam measures the skills of IT Architects and covers the ability to distinguish business requirements from technical ones. It expects candidates to understand the differences between conceptual, logical, and physical designs while also differentiating requirements, assumptions, constraints, and risks. Core concepts of availability, manageability, performance, recoverability, and security (AMPRS) are tested. Learners also need to document risk mitigation strategies, design decisions, and create a validation strategy that ties requirements to practical implementation.</li></ul> |

There are no explicitly testable objectives provided in this domain, but candidates are expected to understand troubleshooting and optimization principles to maintain the VMware environment effectively in real-world deployments.</li> </ul>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |
| Topic 3 | <ul style="list-style-type: none"> <li>• VMware Products and Solutions: This section of the exam evaluates the knowledge of VMware Solution Specialists and focuses on VMware Cloud Foundation (VCF). Candidates must be able to identify and differentiate between various VCF architecture options in given scenarios. The emphasis is on understanding the key products and how they integrate into enterprise design choices.</li> </ul>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |
| Topic 4 | <ul style="list-style-type: none"> <li>• Install, Configure, Administrate the VMware Solution: This section of the exam is relevant to System Administrators. Although it has no directly testable objectives, it underlines the expectation that candidates are familiar with installation, configuration, and administration tasks that form the foundation for VMware Cloud Foundation solutions.</li> </ul>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |
| Topic 5 | <ul style="list-style-type: none"> <li>• Plan and Design the VMware Solution: This section measures the skills of Cloud Infrastructure Designers. It focuses on gathering and analyzing business requirements and then transforming them into conceptual, logical, and physical models of VMware Cloud Foundation. Candidates are expected to identify prerequisites and make design decisions across fleet topologies, networking, management domains, workload domains, automation, and operations. The section also includes designing for availability within and across zones, creating strategies for manageability such as lifecycle, scalability, and capacity, and ensuring performance and recoverability through BCDR strategies. Additional emphasis is given to designing secure environments, workload migration strategies, and creating consumption, automation, and monitoring strategies to support modern applications and governance.</li> </ul> |

### VMware Cloud Foundation 9.0 Architect Sample Questions (Q288-Q293):

#### NEW QUESTION # 288

What is the primary purpose of vSphere Tags?

- A. Allocate resources
- B. Monitor cluster performance
- C. Organize and categorize resources
- D. Manage storage policies

**Answer: C**

Explanation:

Tags allow administrators to organize and categorize vSphere resources.

#### NEW QUESTION # 289

Which Broadcom products support the configuration of a highly available VMware environment?

- A. Broadcom RAID Controller
- B. vSphere HA
- C. Broadcom 25GbE Ethernet Adapter

- **D. vSAN**

**Answer: A,B,D**

Explanation:

Broadcom RAID Controllers, vSphere HA, and vSAN support high availability in VMware environments.

#### NEW QUESTION # 290

Which Broadcom technologies help improve network reliability in VMware Cloud Foundation environments?

- **A. Broadcom Fibre Channel HBAs**
- B. Broadcom RAID controllers
- **C. Broadcom Ethernet adapters**
- D. Broadcom NVMe SSDs

**Answer: A,C**

Explanation:

Broadcom Fibre Channel HBAs and Ethernet adapters improve network reliability in VMware Cloud Foundation environments.

#### NEW QUESTION # 291

Which VMware tools are used for network virtualization in VMware Cloud Foundation?

- **A. VMware NSX**
- B. VMware vSAN
- C. VMware vSphere
- D. VMware vRealize Automation

**Answer: A**

Explanation:

VMware NSX is essential for network virtualization in VMware Cloud Foundation.

#### NEW QUESTION # 292

Which statement would the architect document as a design decision within the logical design?

- A. vSphere High Availability (HA) will be enabled.
- B. The solution must provide the ability to patch an existing template.
- C. Service Levels will align with the defined Business Impact Analysis findings.
- **D. The VMware Distributed Resource Scheduler (DRS) latency sensitivity value will be set to high for the workload cluster.**

**Answer: D**

Explanation:

Logical design decisions specify how features are configured to meet conceptual requirements. In VMware Cloud Foundation logical design, tuning VMware Distributed Resource Scheduler (DRS) parameters such as latency sensitivity for workload clusters is explicitly part of logical design because it directly impacts workload performance and cluster behavior. Options A and B are conceptual or operational, and option D is a standard best practice at the physical design layer. VMware documents emphasize that logical design choices define how features (like DRS, HA, and vSAN policies) are implemented.
