

Marvelous Integration-Architect - Reliable Salesforce Certified Integration Architect Exam Book

BONUS!!! Download part of BraindumpStudy Integration-Architect dumps for free: https://drive.google.com/open?id=1W5FiH83RcQt_NcsyezQmGazjSCionSt1

Our Integration-Architect prep torrent boosts the highest standards of technical accuracy and only use certificated subject matter and experts. We provide the latest and accurate Integration-Architect exam torrent to the client and the questions and the answers we provide are based on the real exam. We can promise to you the passing rate is high and about 98%-100%. Our Integration-Architect Test Braindumps also boosts high hit rate and can stimulate the exam to let you have a good preparation for the Integration-Architect exam. Your success is bound with our Integration-Architect exam questions.

Salesforce Integration-Architect Exam covers a range of topics related to Salesforce integration and architecture. These topics include data integration, platform integration, application integration, security and identity management, and integration testing. Integration-Architect exam is divided into two parts: a multiple-choice exam and a scenario-based exam. The multiple-choice exam covers foundational knowledge on Salesforce integration, while the scenario-based exam tests a candidate's ability to apply their knowledge to real-world situations.

Clear Integration-Architect Exam - Integration-Architect Free Download Pdf

It results in Integration-Architect exam failure and loss of time and money. To pass the Salesforce Integration-Architect exam in a short time, you must prepare with updated Salesforce Integration-Architect practice questions. However, the BraindumpStudy is one of the best and most dependable. This platform offers updated and Real Integration-Architect Exam Questions that help applicants ace the Integration-Architect test for the first time.

Salesforce Integration-Architect (Salesforce Certified Integration Architect) Certification Exam is a valuable certification program for professionals who specialize in integrating Salesforce with other enterprise systems. Integration-Architect exam tests the skills and knowledge of professionals who have experience in designing and implementing complex integration solutions. Salesforce Certified Integration Architect certification is recognized by employers and clients as a mark of competence and expertise, and it can help professionals to advance their careers and increase their earning potential.

Salesforce Integration-Architect Exam covers a wide range of topics, including integration architecture, data integration, enterprise messaging, API integration, and security. Integration-Architect exam also tests your ability to design and implement complex integration solutions that meet business requirements and adhere to best practices. With this certification, you can demonstrate your expertise in Salesforce integration and differentiate yourself in the job market as a highly skilled and experienced integration architect.

Salesforce Certified Integration Architect Sample Questions (Q111-Q116):

NEW QUESTION # 111

Northern Trail Outfitters is seeking to improve the performance and security of outbound integrations from Salesforce to on-premise servers.

What should the Architect consider before recommending a solution?

- A. ShieldPlatform Encryption Limitations
- B. A Default gateway restrictions
- **C. External gateway products in use**
- D. Considerations for using Deterministic Encryption

Answer: C

Explanation:

Explanation

Option A is correct because external gateway products in use can affect the performance and security of outbound integrations from Salesforce to on-premise servers. External gateway products are software or hardware devices that act as intermediaries between Salesforce and the on-premise servers, such as firewalls, proxies, load balancers, or VPNs. They can have different configurations, features, and limitations that can impact the speed, reliability, and security of the data transmission. For example, some external gateway products may require authentication, encryption, or compression of the data, which can add overhead and latency to the integration. Some external gateway products may also have bandwidth or throughput limits, which can affect the scalability and availability of the integration.

Therefore, the architect should consider the external gateway products in use before recommending a solution.

Option B is incorrect because a default gateway restriction is not a factor that can affect the performance and security of outbound integrations from Salesforce to on-premise servers. A default gateway restriction is a feature that allows administrators to restrict outbound requests from Salesforce to a specific IP address or domain name. This can help prevent unauthorized or malicious requests from Salesforce to external systems. However, this feature does not affect the performance or security of the outbound requests themselves, as it only acts as a filter for the destination of the requests.

Option C is incorrect because considerations for using deterministic encryption are not relevant for outbound integrations from Salesforce to on-premise servers. Deterministic encryption is a type of encryption that produces the same ciphertext for the same plaintext input. This can help preserve some functionality and performance of encrypted data in Salesforce, such as filtering, sorting, and indexing.

However, deterministic encryption is not applicable for outbound integrations from Salesforce to on-premise servers, as it is only supported for custom fields and not for standard fields or attachments.

Moreover, deterministic encryption does not affect the security of the data transmission itself, as it only encrypts the data at rest in Salesforce.

Option D is incorrect because Shield Platform Encryption limitations are not relevant for outbound integrations from Salesforce to on-premise servers. Shield Platform Encryption is a feature that allows administrators to encrypt sensitive data at rest in Salesforce using AES 256-bit encryption. This can help protect data from unauthorized access or theft. However, Shield Platform Encryption limitations are not relevant for outbound integrations from Salesforce to on-premise servers, as they only affect the functionality and performance of encrypted data in Salesforce, such as searching, reporting, or validation rules. Shield Platform Encryption does not affect the security of the data transmission itself, as it only encrypts the data at rest in Salesforce.

NEW QUESTION # 112

An organization needs to integrate Salesforce with an external system and is considering authentication options. The organization already has implemented SAML, using a third-party Identity Provider for integrations between other systems.

Which use case can leverage the existing SAML integration to connect Salesforce with other internal systems?

- **A. Make formula fields with HYPERLINK() to external web servers more secure.**
- B. Make Apex SOAP outbound integrations to external web services more secure.
- C. A Make Apex REST outbound integrations to external web services more secure.
- D. Make an API inbound integration from an external Java client more secure.

Answer: A

NEW QUESTION # 113

Only authorized users are allowed access to the EBS and the Enterprise DMS.

Customers call Customer Support when they need clarification on their bills. Customer Support needs seamless access to customer billing information from the E and view generated bills from the DMS.

Which three authorization and authentication needs should an integration consultant consider while integrating the DMS and ESB

with Salesforce?

should an integration consultant consider while integrating the DMS and ESB with Salesforce?

Choose 3 answers

- A. Identify options to maintain DMS and EBS authentication and authorization details in Salesforce.
- B. Consider options to migrate DMS and EBS into Salesforce.
- **C. Consider Enterprise security needs for access to DMS and EBS.**
- **D. Users should be authorized to view information specific to the customer they are servicing without a need to search for customer.**
- **E. Users should be authenticated into DMS and EBS without having to enter username and password.**

Answer: C,D,E

Explanation:

Explanation

The integration consultant should consider the following authorization and authentication needs while integrating the DMS and ESB with Salesforce:

Users should be authorized to view information specific to the customer they are servicing without a need to search for customer.

This means that the integration should provide a seamless and contextual access to the customer billing information and generated bills from the DMS and ESB, based on the customer record or case that the user is working on in Salesforce.

Consider Enterprise security needs for access to DMS and ESB. This means that the integration should comply with the security policies and standards of the Enterprise, such as encryption, auditing, logging, monitoring, etc.

Users should be authenticated into DMS and ESB without having to enter username and password. This means that the integration should use a single sign-on (SSO) mechanism that allows users to access multiple systems with one login credential, such as OAuth or SAML³⁴ References: Authorization Through Connected Apps and OAuth 2.0, Single Sign-On for Desktop and Mobile Applications using SAML and OAuth

NEW QUESTION # 114

Northern Trail Outfitters (NTO) has an affiliate company that would like immediate notifications of changes to opportunities in the NTO Salesforce instance. The affiliate company has a CometD client available.

Which solution is recommended in order to meet the requirement?

- A. Implement a polling mechanism in the client that calls the SOAP API get updated method to get the ID values of each updated record.
- B. Create a connected app in the affiliate org and select the "Accept CometD API Requests".
- **C. Create a PushTopic update event on the Opportunity Object to allow the subscriber to react to the streaming API.**
- D. Configure External Services to call the subscriber in Apex in the Onchange Trigger event as part of the flow.

Answer: C

Explanation:

Streaming API is the best option for sending real-time notifications of changes to Salesforce data. Streaming API uses a publish-subscribe model to push relevant data to subscribers without polling. Streaming API supports PushTopic events, which are based on SOQL queries that define the data changes to listen for. The affiliate company can subscribe to a PushTopic event on the NTO Salesforce org and receive notifications whenever the data that matches the query changes. This way, the affiliate company can be informed of any updates to the opportunities in the NTO Salesforce instance.

NEW QUESTION # 115

Universal Containers (UC) currently owns a middleware tool and they have developed an API-led integration architecture with three API tiers. The first-tier interfaces directly with the systems of engagement, the second tier implements business logic and aggregates data, while the third-tier interfaces directly with systems of record. Some of the systems of engagement will be a mobile application, a web application, and Salesforce.

UC has a business requirement to return data to the systems of engagement in different formats while also enforcing different security protocols.

What should an Integration Architect recommend to meet these requirements?

- **A. Implement an API gateway that all systems of engagement must interface with first.**
- B. Leverage an Identity Provider solution that communicates with the API tiers via SAML
- C. Enforce separate security protocols and return formats at the second tier of the API-led architecture.

- Answer: A**

Explanation
