Valid Test MD-102 Test - MD-102 Valid Exam Questions

In order to meet the requirements of our customers, Our MD-102 test questions carefully designed the automatic correcting system for customers. It is known to us that practicing the incorrect questions is very important for everyone, so our MD-102 exam question provide the automatic correcting system to help customers understand and correct the errors. Our MD-102 Guide Torrent will help you establish the error sets. We believe that it must be very useful for you to take your MD-102 exam, and it is necessary for you to use our MD-102 test questions.

Microsoft Endpoint Administrator Sample Questions (Q64-Q69):

NEW QUESTION # 64

Your network contains an Active Directory domain that is synced to Microsoft Azure Active Directory (Azure AD). The domain contains 500 laptops that run Windows 8.1 Professional. The users of the laptops work from home.

Your company uses Microsoft Intune, the Microsoft Deployment Toolkit (MDT), and Windows Configuration Designer to manage client computers.

The company purchases 500 licenses for Windows 10 Enterprise.

You verify that the hardware and applications on the laptops are compatible with Windows 10.

The users will bring their laptop to the office, where the IT department will deploy Windows 10 to the laptops while the users wait.

You need to recommend a deployment method for the laptops that will retain their installed applications. The solution must minimize how long it takes to perform the deployment.

What should you include in the recommendation?

- A. a clean installation by using a Windows Configuration Designer provisioning package
- B. an in-place upgrade
- C. Windows AutoPilot

- D. a clean installation and the User State Migration Tool (USMT)

Answer: B

Explanation:

For existing computers running Windows 7, Windows 8, or Windows 8.1, the recommended path for organizations deploying Windows 10 leverages the Windows installation program (Setup.exe) to perform an in-place upgrade, which automatically preserves all data, settings, applications, and drivers from the existing operating system version. This requires the least IT effort, because there is no need for any complex deployment infrastructure.

NEW QUESTION # 65

You have a Microsoft 365 E5 subscription that contains 100 Windows 10 devices enrolled in Microsoft Intune.

You need to create Endpoint security policies to meet the following requirements:

- * Hide the Firewall & network protection area in the Windows Security app.
- * Disable the provisioning of Windows Hello for Business on the devices.

Which two policy types should you use? To answer, select the policies in the answer area.

NOTE: Each correct selection is worth one point.

Answer:

Explanation:

Manage

Explanation:

Graphical user interface, application Description automatically generated

In the Antivirus policy settings, you can hide the Firewall and network protection area in the Windows Security app. Windows Hello for Business settings are configured in Identity protection.

NEW QUESTION # 66

Hotspot Question

You have a Microsoft 365 subscription that contains two security groups named Group1 and Group2. Microsoft 365 uses Microsoft Intune Suite.

You use Microsoft Intune to manage devices.

You need to assign roles in Intune to meet the following requirements:

- The members of Group1 must manage Intune roles and assignments.
- The members of Group2 must assign existing apps and policies to users and devices.

The solution must follow the principle of least privilege.

Which role should you assign to each group? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

Answer:

Explanation:

Answer Area

Explanation:

Help Desk Operator: Performs remote tasks on users and devices, and can assign applications or policies to users or devices.

Intune Role Administrator: Manages custom Intune roles and adds assignments for built-in Intune roles. It's the only Intune role that can assign permissions to Administrators.

NEW QUESTION # 67

You have a Microsoft 365 subscription.

You plan to use Windows Autopilot to provision 25 Windows 11 devices.

You need to configure the Out-of-box experience (OOBE) settings.

What should you create in the Microsoft Intune admin center?

- A. a PowerShell script
- B. a compliance policy
- C. a configuration profile
- D. an enrollment status page (ESP)
- E. a deployment profile

Answer: E

Explanation:

[https://learn.microsoft.com/en-us/autopilot/profiles#:~:text=On%20the%20Out%2Dof%2Dbox%20experience%](https://learn.microsoft.com/en-us/autopilot/profiles#:~:text=On%20the%20Out%2Dof%2Dbox%20experience%20)

NEW QUESTION # 68

You have a computer named Computer1 that has Windows 10 installed.

You create a Windows PowerShell script named config.ps1.

You need to ensure that config.ps1 runs after feature updates are installed on Computer1.

Which file should you modify on Computer1?

- A. LiteTouch.wsf
- B. SetupConfig.ini
- C. Unattend.xml
- D. Unattendb*

Answer: B

Explanation:

SetupConfig.ini is a file that can be used to customize the behavior of Windows Setup during feature updates. You can use this file to specify commands or scripts that run before or after the installation process. To run a PowerShell script after a feature update, you can use the PostOOBE parameter in SetupConfig.ini and specify the path to the script file. Reference: [SetupConfig.ini reference]
