Pass Amazon AWS-Solutions-Architect-Associate Rate & AWS-Solutions-Architect-Associate Latest Exam Preparation

Facing the incoming Amazon AWS-Solutions-Architect-Associate Exam, you may feel stained and anxious, suspicious whether you could pass the exam smoothly and successfully. Actually, you must not impoverish your ambition. Our suggestions are never boggle at difficulties. It is your right time to make your mark. Preparation of exam without effective materials is just like a soldier without gun.

The AWS Certified Solutions Architect - Associate (SAA-C02) certification is designed for individuals who are looking to validate their knowledge and expertise in designing and deploying scalable systems on Amazon Web Services (AWS). AWS Certified Solutions Architect - Associate (SAA-C02) certification is highly sought after by IT professionals who work with AWS and want to demonstrate their skills to potential employers. The AWS-Solutions-Associate exam is the official certification exam for this certification.

The AWS-Solutions-Architect-Associate Certification Exam consists of multiple-choice questions and scenario-based questions that test candidates' knowledge of AWS services and architectures. AWS-Solutions-Architect-Associate exam covers a wide range of topics, including AWS services such as EC2, S3, RDS, DynamoDB, and CloudFormation, as well as AWS architectural principles, security, and best practices for scaling and deploying applications on AWS.

Amazon AWS Certified Solutions Architect - Associate (SAA-C02) Sample Questions (Q536-Q541):

NEW QUESTION # 536

A company has an Amazon S3 data lake that is governed by AWS Lake Formation. The company wants to create a visualization in Amazon QuickSight by joining the data in the data lake with operational data that is stored in an Amazon Aurora MySQL database. The company wants to enforce column-level authorization so that the company's marketing team can access only a subset of

columns in the database Which solution will meet these requirements with the LEAST operational overhead?

- **A. Use a Lake Formation blueprint to ingest the data from the database to the S3 data lake Use Lake Formation to enforce column-level access control for the QuickSight users Use Amazon Athena as the data source in QuickSight**
- B. Use AWS Glue Studio to ingest the data from the database to the S3 data lake Attach an IAM policy to the QuickSight users to enforce column-level access control. Use Amazon S3 as the data source in QuickSight
- C. Use Amazon EMR to ingest the data directly from the database to the QuickSight SPICE engine Include only the required columns
- D. Use AWS Glue Elastic Views to create a materialized view for the database in Amazon S3 Create an S3 bucket policy to enforce column-level access control for the QuickSight users Use Amazon S3 as the data source in QuickSight.

Answer: A

Explanation:

Explanation

Enforce column-level authorization with Amazon QuickSight and AWS Lake Formation

NEW QUESTION # 537

In Amazon ElastiCache, the default cache port is:

- A. for Memcached 11210 and for Redis 6380.
- B. for Memcached 11211 and for Redis 6380.
- C. for Memcached 11210 and for Redis 6379.
- **D. for Memcached 11211 and for Redis 6379.**

Answer: D

Explanation:

In Amazon ElastiCache, you can specify a new port number for your cache cluster, which by default is 11211 for Memcached and 6379 for Redis.

Reference:

<http://docs.aws.amazon.com/AmazonElastiCache/latest/UserGuide/GettingStarted.AuthorizeAccess.html>

NEW QUESTION # 538

A company uses an application to present metrics from sporting events to the public. The application must scale quickly during live events and must store these metrics for long-term reporting purposes. The company's architecture includes the following:

- * Amazon EC2 instances that run in an Auto Scaling group in private subnets
- * A network Load Balancer That runs in public subnets
- * A MongoDB database cluster that runs across multiple EC2 instances

A solutions architect must implement a solution that minimizes operational overhead The solution also must be able to scale automatically. What should the solutions architect set up to meet these requirements?

- A. EC2 instances that run MySQL
- B. Amazon Redshift
- **C. An Amazon DynamoDB database**
- D. An Amazon RDS for MySQL D6 instance

Answer: C

NEW QUESTION # 539

A team has an application that detects new objects being uploaded into an Amazon bucket. The upload triggers an AWS Lambda function to write metadata into an Amazon DynamoDB table and an Amazon RDS for PostgreSQL database.

Which action should the team take to ensure high availability?

- **A. Enable Multi-AZ on the RDS PostgreSQL database.**
- B. Enable Cross-Region Replication to ensure high availability
- C. Create a Lambda function for each Availability Zone the application is deployed in

- D. Create a DynamoDB stream for the DynamoDB table

Answer: A

NEW QUESTION # 540

A company has a web application hosted over 10 Amazon EC2 instances with traffic directed by Amazon Route 53. The company occasionally experiences a timeout error when attempting to browse the application.

The networking team finds that some DNS queries return IP addresses of unhealthy instances, resulting in the timeout error. What should a solutions architect implement to overcome these timeout errors?

- A. Create an Amazon CloudFront distribution with EC2 instances as its origin. Associate a health check with the EC2 instances.
- B. Create a Route 53 failover routing policy record for each EC2 instance. Associate a health check with each record.
- **C. Create an Application Load Balancer (ALB) with a health check in front of the EC2 instances. Route to the ALB from Route 53.**
- D. Create a Route 53 simple routing policy record for each EC2 instance. Associate a health check with each record.

Answer: C

Explanation:

Explanation

An Application Load Balancer (ALB) allows you to distribute incoming traffic across multiple backend instances, and can automatically route traffic to healthy instances while removing traffic from unhealthy instances. By using an ALB in front of the EC2 instances and routing traffic to it from Route 53, the load balancer can perform health checks on the instances and only route traffic to healthy instances, which should help to reduce or eliminate timeout errors caused by unhealthy instances.
