SAP Certified Associate - Data Analyst - SAP Analytics Cloud Sample Questions (Q31-Q36):

NEW QUESTION # 31

You input new data for a private version in a story. What must you do to ensure the new data is added to the model?

- A. Nothing
- B. Save
- C. Send
- D. Publish

Answer: D

Explanation:

When inputting new data for a private version in a story in SAP Analytics Cloud, it is necessary to "Publish" the data to ensure it is added to the model. Publishing the private version commits the changes to the underlying model, making the new data visible and accessible to other users according to their permissions. This step is crucial for ensuring that the updated data is incorporated into the shared model for further analysis and decision-making.

NEW QUESTION # 32

You have a story based on an import model. The transaction data in the model's data source changes. How can you update the data in the model? Note: There are 2 correct answers to this question.

- A. Schedule the import
- B. Allow model import
- C. Refresh the story
- D. Refresh the import job

Answer: A,C

Explanation:

To update the data in a model based on an import connection, two main approaches can be used:

Refresh the story: This action forces SAP Analytics Cloud to reload the data for the visualizations in a story, pulling in the most recent data available in the model. This is a manual process initiated by the user.

Schedule the import: This option allows users to set up a recurring data import schedule, ensuring the model is regularly updated with the latest data from the source system. This automated process helps maintain data freshness without manual intervention.

Both methods ensure that the story reflects the most current data, accommodating changes in the transaction data of the model's data source.

NEW QUESTION # 33

How can you improve the performance of advanced data actions? Note: There are 3 correct answers to this question.

- A. Use fewer data functions
- B. Use fewer FOREACH functions
- C. Use fewer IF statements
- D. Use fewer aggregation dimension functions
- E. Use fewer MEMBERSET statements

Answer: A,B,C

NEW QUESTION # 34

You want to use an input control to filter data appearing in a story. At what level is the filter applied?

- A. Story
- B. Component
- C. Calculation
- **D. Page**

Answer: D

Explanation:

When using an input control to filter data in a SAP Analytics Cloud story, the filter is applied at the Page level. This means that the selected filter criteria will affect all the components (tables, charts, etc.) on that particular page, allowing for a cohesive and consistent view of the data filtered according to the chosen parameters.

NEW QUESTION # 35

What are the available connection types in SAP Analytics Cloud? Note: There are 2 correct answers to this question.

- A. Cloud
- **B. Live**
- **C. Import**
- D. On-premise

Answer: B,C

Explanation:

SAP Analytics Cloud supports two primary types of data connections: Live Data Connection and Import Data Connection. Live Data Connection establishes a direct link to the data source, allowing real-time data access without replicating the data into SAP Analytics Cloud. This is ideal for scenarios where up-to-the-minute data is crucial, and data volume is large. On the other hand, Import Data Connection involves copying data from the source into SAP Analytics Cloud, which is suitable for scenarios where data doesn't change frequently, or there's a need for data transformation and enrichment within SAP Analytics Cloud.
