Außerdem sind jetzt einige Teile dieser DeutschPrüfung MB-820 Prüfungsfragen kostenlos erhältlich: <https://drive.google.com/open?id=17gPMftpwIDBMv4Y798IHU-tWtY0f58sa>

Die IT-Eliten aus unserem DeutschPrüfung haben große Mühe gegeben, um den breiten Kandidaten die neuesten Fragenkataloge zur Microsoft MB-820 Zertifizierungsprüfung zu bieten und um die Genauigkeit der Testaufgaben zu erhöhen. Wenn Sie DeutschPrüfung wählen, können Sie die Microsoft MB-820 Zertifizierungsprüfung leichter bestehen. Außerdem werden Sie einjährige Aktualisierung genießen, nachdem Sie die Fragenkataloge zur Microsoft MB-820 Zertifizierungsprüfung gekauft haben.

## Microsoft MB-820 Prüfungsplan:

| Thema   | Einzelheiten                                                                                                                                                                                                                                                                             |
|---------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Thema 1 | <ul style="list-style-type: none"> <li>• Develop by using AL objects: Building and extending tables and reports is discussed in this topic. It also explains Designing and creating an XMLport. Lastly, it discusses how to work with entitlement and permission set objects.</li> </ul> |
| Thema 2 | <ul style="list-style-type: none"> <li>• Develop by using AL: How to Customize the UI experience and Use AL for business central extension is discussed here. It also delves into explaining the essential development standards.</li> </ul>                                             |

- Work with development tools: Implementing semi-automated test processes and managing and assessing telemetry are its sub-topics.

## &gt;&gt; MB-820 Musterprüfungsfragen &lt;&lt;

**MB-820 Fragenkatalog, MB-820 Fragen Und Antworten**

Es existiert viele Methoden, sich auf die Microsoft MB-820 Zertifizierungsprüfung vorzubereiten. Unsere Website bietet zuverlässige Trainingsinstrumente, mit denen Sie sich auf die nächste Microsoft MB-820 Zertifizierungsprüfung vorbereiten. Die Lernmaterialien zur Microsoft MB-820 Zertifizierungsprüfung von DeutschPrüfung enthalten sowohl Fragen als auch Antworten. Unsere Materialien sind von der Praxis überprüfte Software. Wir werden alle Ihren Bedürfnisse zur IT-Zertifizierung abdecken.

**Microsoft Dynamics 365 Business Central Developer MB-820 Prüfungsfragen mit Lösungen (Q52-Q57):****52. Frage**

You have a per tenant extension that contains the following code.

```

10 interface "IDiscount Calculation"
11 {
12     procedure GetLine(var Line: Variant)
13     procedure GetDiscount() : Decimal
14 }
15 codeunit 50100 "Discount Mgmt." implements "IDiscount Calculation"
16 {
17     procedure GetLine(var VariantLine: Variant)
18     begin
19     end;
20     procedure GetDiscount() DiscountAmount : Decimal
21     begin
22     end;
23     procedure DiscountIsValid(DocumentDate: Date): Boolean
24     begin
25     end;
26 }

```

For each of the following statements, select Yes if the statement is true. Otherwise, select No.

NOTE: Each correct selection is worth one point.

Interface implementation

**Statement**

Codeunit "Discount Mgmt." compiles successfully.

VariantLine in line 17 must be changed to Line and the DiscountAmount removed for the codeunit to compile.

The DiscountIsValid method must be defined in the interface for the code to compile.

Yes

No

☐☐☐☐☐☐

**Antwort:**

**Begründung:**

| Statement                                                                                                  | Yes                              | No                               |
|------------------------------------------------------------------------------------------------------------|----------------------------------|----------------------------------|
| Codeunit "Discount Mgmt." compiles successfully.                                                           | <input type="radio"/>            | <input checked="" type="radio"/> |
| VariantLine in line 17 must be changed to Line and the DiscountAmount removed for the codeunit to compile. | <input type="radio"/>            | <input checked="" type="radio"/> |
| The DiscountIsValid method must be defined in the interface for the code to compile.                       | <input checked="" type="radio"/> | <input type="radio"/>            |

Explanation:

\* Codeunit "Discount Mgmt." compiles successfully. = NO

\* VariantLine in line 17 must be changed to Line and the DiscountAmount removed for the codeunit to compile. = NO

\* The DiscountIsValid method must be defined in the interface for the code to compile. = YES The codeunit "Discount Mgmt." will not compile successfully as is because the DiscountIsValid method is not defined in the "IDiscount Calculation" interface, yet it is being declared in the codeunit which implements this interface. AL requires that all procedures in the codeunit that implements an interface must be defined in the interface itself.

The VariantLine in line 17 does not need to be changed to Line, nor does the DiscountAmount need to be removed for the codeunit to compile. These are valid declarations in AL and they are correctly implemented in the codeunit. The Variant data type in AL is used to handle various data types and DiscountAmount is a valid return type for a procedure.

For the code to compile successfully, the DiscountIsValid method must be included in the interface because AL enforces that any codeunit implementing an interface must implement all the methods defined in that interface.

### 53. Frage

You create a 'Contoso Post' procedure to send an http POST request in JSON format. You publish the procedure to your environment.

You write the following procedure code:

```

01 procedure ContosoPost(RequestText: Text; var ResponseText : Text; Token: Text)
02 var
03     Content: HttpContent;
04     Headers: HttpHeaders;
05     Client: HttpClient;
06     ResponseMessage: HttpResponseMessage;
07 begin
08     Client.Clear();
09     Content.Clear();
10     Content.WriteFrom(RequestText);
11     Content.GetHeaders(Headers);
12     Headers.Clear();
13     Headers.Add('Content-Type', 'text/plain');
14     Headers.Add('Authorization', 'Bearer ' + Token);
15     if Client.Post('https://contoso.com/api', Content, ResponseMessage) then
16         Content.ReadAs(ResponseText);
17 end;

```

The procedure does not work as expected.

You need to find and fix all errors in HTTP class usage.

For each of the following statements, select Yes if the statement is true. Otherwise, select No.

NOTE: Each correct selection is worth one point.

| Statement                                                                                  | Yes                   | No                    |
|--------------------------------------------------------------------------------------------|-----------------------|-----------------------|
| Replace line 16 with ResponseText := ResponseMessage                                       | <input type="radio"/> | <input type="radio"/> |
| In line 13, change the 'text/plain' value to 'application/json'                            | <input type="radio"/> | <input type="radio"/> |
| Replace line 14 with Client.DefaultRequestHeaders.Add('Authorization', 'Bearer ' + Token); | <input type="radio"/> | <input type="radio"/> |
| In line 10, replace WriteFrom with ReadAs                                                  | <input type="radio"/> | <input type="radio"/> |

Antwort:

Begründung:

Locate code errors

| Statement                                                                                               | Yes                              | No                               |
|---------------------------------------------------------------------------------------------------------|----------------------------------|----------------------------------|
| Replace line 16 with <code>ResponseText = ResponseMessage</code>                                        | <input type="radio"/>            | <input checked="" type="radio"/> |
| In line 13, change the "text/plain" value to "application/json"                                         | <input checked="" type="radio"/> | <input type="radio"/>            |
| Replace line 14 with <code>Client.DefaultRequestHeaders.Add('Authorization', 'Bearer ' + Token);</code> | <input type="radio"/>            | <input checked="" type="radio"/> |
| In line 10 replace <code>System.Linq</code> with <code>System</code>                                    | <input type="radio"/>            | <input checked="" type="radio"/> |

#### 54. Frage

You are creating a new Business Central report.

You plan to use triggers and functions to dynamically create a dataset and control the report behavior.

You must provide the following implementation.

- \* Run when the report is loaded.
- \* Run when the data item is iterated for the last time.
- \* Skip the rest of the report.

You need to select the triggers and functions for the report.

Which triggers and functions should you use? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

Report trigger and function

**Requirement**  
Runs when the report is loaded.

Runs when the data item has been iterated for the last time.  
Use this function to skip the rest of the report.

Use this function to skip the rest of the report.

**Trigger/function**

OnPreReport  
OnInitReport  
OnPostReport

OnPostDataItem  
OnPreDataItem  
OnAfterGetRecord

CurrReport.Quit()  
CurrReport.Break()  
CurrReport.Skip()

Antwort:

Begründung:

Report trigger and function

**Requirement**  
Runs when the report is loaded.

Runs when the data item has been iterated for the last time.  
Use this function to skip the rest of the report.

Use this function to skip the rest of the report.

**Trigger/function**

OnPreReport  
OnInitReport  
OnPostReport

OnPostDataItem  
OnPreDataItem  
OnAfterGetRecord

CurrReport.Quit()  
CurrReport.Break()  
CurrReport.Skip()

Explanation:

- \* Run when the report is loaded: OnInitReport
- \* Run when the data item is iterated for the last time: OnPostDataItem
- \* Skip the rest of the report: CurrReport.Skip()

Triggers and Functions:

- \* Run when the report is loaded. The correct trigger for running a function when the report is loaded is OnInitReport.
- \* OnInitReport is triggered when the report is initialized, which aligns with the requirement to run when the report is loaded.
- \* Run when the data item is iterated for the last time. The correct trigger here is OnPostDataItem.
- \* OnPostDataItem runs when the data item has been fully processed and iterated for the last time, which is the specific requirement for this condition.
- \* Skip the rest of the report. The correct function here is CurrReport.Skip().
- \* CurrReport.Skip() is used to skip the remaining records and terminate the current iteration, allowing you to skip the rest of the report as required.

### 55. Frage

You need to define the properties of the comments field of the Non-conformity page.

How should you complete the code segment? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

**ExtendedData type property**

```
group(commentsGroup)
{
    field("comments"; NonConformityComments)
    {
        ApplicationArea = All;
        MultiLine = True;
        MultiLine = False;
        NotBlank = True;
        NotBlank = False;
        DataType
        ExtendDataType
        ExtendedDatatype
        RichDataType
    }
}

var
    NonConformityComments: Text;
```

**Antwort:**

**Begründung:**

**ExtendedData type property**

```
group(commentsGroup)
{
    field("comments"; NonConformityComments)
    {
        ApplicationArea = All;
        MultiLine = True;
        MultiLine = False;
        NotBlank = True;
        NotBlank = False;
        DataType
        ExtendDataType
        ExtendedDatatype
        RichDataType
    }
}

var
    NonConformityComments: Text;
```

**Explanation:**

**ExtendedDataType property**

```

group(commentsGroup)
{
  field("comments"; NonConformityComments)
  {
    ApplicationArea = All;
    MultiLine = True;
    MultiLine = False;
    NotBlank = True;
    NotBlank = False;

### 56. Frage

Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution.

After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.

A company creates a Business Central app and a table named MyTable to store records when sales orders are posted.

Users report the following issues:

- The users receive permission errors related to MyTable.
- Users are no longer able to post sales orders since installing the new app.
- The users cannot access the list page created in MyTable.

You need to resolve the user issues without creating new permission sets. You must use the principle of least privilege.

Solution: In the MyTable object, add the property InherentPermissions = RI.

Does the solution meet the goal?

- A. No
- B. Yes

**Antwort: A**

Begründung:

The property `InherentPermissions` is used to automatically grant permissions to the table object it is applied to, but setting it to `RL` (which seems to be a typo and should likely be `'RL'` for Read and Insert permissions) is not sufficient in this scenario. The issues reported by the users suggest that they need more than just read and insert permissions on `MyTable`. Since users are unable to post sales orders, they likely need `Modify`, `Delete`, or `Execute` permissions on certain tables or objects related to the sales order process. Additionally, the inability to access the list page created in `MyTable` could be due to lacking `Read` permissions on other related objects or pages. Therefore, merely setting `InherentPermissions = RL` on `MyTable` does not comprehensively address the users' permission issues, especially when considering the principle of least privilege. A more tailored approach to permissions, potentially involving adjustments to the app's code or configuration to ensure proper permissions are applied where necessary, would be needed.

### 57. Frage

• • • • •

Im Informationszeitalter kümmern sich viele Leute um die IT-Branche. Aber es fehlen trotz den vielen Exzellenten doch IT-Fachleute. Viele Firmen stellen ihre Angestellte nach ihren Fragenkataloge Zertifikaten ein. Deshalb sind die Zertifikate bei den Firmen sehr beliebt. Aber es ist nicht so leicht, diese Zertifikate zu erhalten. Die Microsoft MB-820 Zertifizierungsprüfung ist eine schwierige Zertifizierungsprüfung. Obwohl viele Menschen beteiligen sich an der Microsoft MB-820 Zertifizierungsprüfung, ist jedoch die Pass-Quote eher niedrig.
