People who don't study from updated Endpoint Administrator (MD-102) questions fail the examination and loss time and money.

Microsoft Endpoint Administrator Sample Questions (Q192-Q197):

NEW QUESTION # 192

You need to meet the technical requirements for the iOS devices.

Which object should you create in Intune?

- A. A Deployment profile
- B. An app protection policy
- C. A compliance policy
- **D. A device configuration profile**

Answer: D

Explanation:

NEW QUESTION # 193

You have a Microsoft 365 E5 subscription. The subscription contains 25 computers that run Windows 11 and are enrolled in Microsoft Intune. You need to onboard the devices to Microsoft Defender for Endpoint. What should you create in the Microsoft Intune admin center?

- A. an account protection policy
- B. a security baseline
- C. an antivirus policy
- D. an attack surface reduction (ASR) policy
- **E. an endpoint detection and response (EDR) policy**

Answer: E

Explanation:

Explanation

To onboard the devices to Microsoft Defender for Endpoint, you need to create an endpoint detection and response (EDR) policy in the Microsoft Intune admin center. This policy enables EDR capabilities on devices that are enrolled in Intune and allows you to configure various settings for EDR functionality. You can then assign the policy to groups of users or devices. References:

NEW QUESTION # 195

You have an Azure AD tenant named contoso.com.

You need to ensure that users are not added automatically to the local Administrators group when they join their Windows 11 device to contoso.com.

What should you configure?

- A. Device settings in Azure AD
- B. Windows Autopilot
- C. provisioning packages for Windows
- D. Security defaults in Azure AD

Answer: A

Explanation:

To ensure that users are not added automatically to the local Administrators group when they join their Windows 11 device to

contoso.com, you should configure the Device settings in Azure AD. The Device settings allow you to manage which users can join devices to Azure AD and whether they are added as local administrators or standard users. By default, users who join devices to Azure AD are added to the local Administrators group, but you can change this setting to None or Selected1.

The other options are not relevant for this scenario because:

Windows Autopilot is a service that allows you to pre-configure new devices and enroll them automatically to Azure AD and Microsoft Intune. It does not control the local administrator role of the users who join the devices2.

Provisioning packages for Windows are files that contain custom settings and policies that can be applied to Windows devices during the setup process. They do not affect the Azure AD join process or the local administrator role of the users3.

Security defaults in Azure AD are a set of basic identity security mechanisms that are enabled by default to protect your organization from common attacks. They do not include any settings related to device management or local administrator role4.

NEW QUESTION # 196

You have an on-premises Active Directory domain that syncs to Azure AD tenant.

The tenant contains computers that run Windows 10. The computers are hybrid Azure AD joined and enrolled in Microsoft Intune.

The Microsoft Office settings on the computers are configured by using a Group Policy Object (GPO).

You need to migrate the GPO to Intune.

Which three actions should you perform in sequence? To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order.

Actions	Answer Area
Assign the policy.	
Create a compliance policy.	
Set a scope tag to the policy.	1
Import an ADMX file.	2
Create a configuration profile.	3
Configure the Administrative Templates settings.	
Assign the profile.	

Microsoft
