NEW OUESTION #73

Which of the following types of injuries is most likely to occur during an MRI scanning process?

- A. missile projection
- B. permanent hearing loss
- C. visual impairment
- D. radiation overexposure

Answer: A

Explanation:

MRI does not use ionizing radiation, so radiation-related injuries are not possible. The greatest risk is the "missile effect" where ferromagnetic objects (scissors, oxygen tanks, tools) are violently pulled into the MRI bore by its powerful magnetic field.

- D). Missile projection (Correct): Most likely injury hazard.
- A). Visual impairment: Not a typical MRI injury.
- B). Radiation overexposure: MRI uses magnetic fields, not radiation.
- C). Hearing loss: Possible from loud noise but mitigated with ear protection; less common than missile hazard.

NEW QUESTION #74

An administrator is considering outsourcing the BioMed function to reduce cost. The low-bid base price for outside annual inspection and testing service is \$180,000 with an \$80/hr repair labor rate and a \$120/hr call-in labor rate. The BioMed department currently has an annual labor budget of \$240,000. Assuming an estimate of 600 hours of repair labor and 100 hours of call-in labor, how much will the administrator save annually with the outsourcing option?

- A. \$12,000
- B. \$0
- C. \$80,000

Step-by-Step Calculation:

Current in-house cost: \$240,000.

Outsourcing cost: Base price: \$180,000

Repair: $600 \text{ hrs} \times \$80/\text{hr} = \$48,000$ Call-in: $100 \text{ hrs} \times \$120/\text{hr} = \$12,000$

Total outsourcing = \$180,000 + \$48,000 + \$12,000 = \$240,000

Difference: \$240,000 - \$240,000 = \$0

• D. \$48,000

Answer: B

Explanation:

The outsourcing scenario matches the current in-house budget exactly; therefore, no savings are achieved.

This type of financial analysis is common in the CHFM Financial Management domain.

Fire drills in healthcare occupancies shall include the

- A. transmission of the fire alarm signal and simulation of emergency fire conditions.
- B. evacuation of patients to areas of refuge and evacuation of staff from the building.
- C. transmission of a fire alarm signal and audible alarms on each shift.
- D. evacuation of bedridden and infirmed patients to the adjacent smoke compartment.

Answer: A

Explanation:

NFPA 101 (Life Safety Code, Chapter 18/19.7.1.4) requires healthcare fire drills to include transmission of the fire alarm signal and a simulation of emergency fire conditions, ensuring staff are trained to carry out emergency duties. Full evacuation of patients is not required during drills.

- A. housekeeping and security.
- B. information technologies and finance.
- C. interior designer and supply chain.
- D. infection prevention and safety.

Answer: D

Explanation:

The Infection Control Risk Assessment (ICRA) process, supported by The Joint Commission and Facility Guidelines Institute (FGI) standards, mandates involvement of infection prevention and safety personnel in planning. Correct (D): Ensures compliance with infection prevention standards and staff/patient safety during renovation. Incorrect:

- A). housekeeping and security: Important for support but not primary coordinators.
- B). interior designer and supply chain: Handle design and material procurement, but not regulatory compliance.
- C). information technologies and finance: Important in certain projects, but not relevant for infection/safety planning. References:
