The web-based AZ-104 practice exam is similar to the desktop-based software. You can take the web-based AZ-104 practice exam on any browser without needing to install separate software. In addition, all operating systems also support this web-based Microsoft AZ-104 Practice Exam. Both Microsoft Azure Administrator practice exams track your performance and help to overcome mistakes. Furthermore, you can customize your Microsoft Azure Administrator practice exams according to your needs.

Microsoft AZ-104 exam is an essential certification for IT professionals who want to work with Azure. It covers a wide range of topics related to Azure Administration and is designed to test your skills and knowledge of Azure. By passing the exam, you will become a certified Microsoft Azure Administrator and will be qualified to work with Azure in a professional capacity. With the increasing demand for cloud professionals, this certification will help you stand out in the job market and advance your career.

Microsoft AZ-104 Exam is designed to test the skills of IT professionals who are interested in becoming Microsoft Azure Administrators. AZ-104 exam is the updated version of the Microsoft AZ-103 exam and it validates the knowledge and expertise of candidates in managing Azure resources, implementing and managing storage solutions, managing Azure identities and governance, managing virtual networks, and managing Azure compute resources.

AZ-104 Exam Guide Materials, Test AZ-104 Dumps.zip

In today's world, the AZ-104 certification exam has become increasingly popular, providing professionals with the opportunity to upskill and stay competitive in the tech industry. At DumpsTorrent, we understand the importance of obtaining the Microsoft AZ-104 Certification in the Microsoft sector, where technological advancements constantly evolving.

Format of Microsoft AZ-104 Test

The applicants should take their time and go through the certification webpage to read the exam policies and all that is required of the potential test-takers. This includes the number of questions, which may be from 40 to 60, with the allocated time that is 180 minutes. All the questions may be based on multiple-choice, active screen, case studies, and lab format if to name just a few. The passing score for AZ-104 Exam is 700 points and luckily, there is no negative marking for the wrong answers. You also need to know that AZ-104 exam costs \$165 and is available in Simplified Chinese, English, Japanese, and Korean.

Microsoft Azure Administrator Sample Questions (Q374-Q379):

NEW QUESTION # 374

Your on-premises network contains a VPN gateway.

You have an Azure subscription that contains the resources shown in the following table.

Name	Type	Description
vgw1	Virtual network gateway	Gateway for Site-to-Site VPN to the on-premises network
storage1	Storage account	Standard performance tier
Vnet1	Virtual network	Enabled forced tunneling
VM1	Virtual machine	Connected to Vnet1

You need to ensure that all the traffic from VM1 to storage1 travels across the Microsoft backbone network. What should you configure?

- A. private endpoints
- B. Azure AD Application Proxy
- C. Azure Peering Service
- **D. Azure Firewall**

Answer: D

Explanation:

Per the MS documentation, private endpoint seems to be the proper choice: "You can use private endpoints for your Azure Storage accounts to allow clients on a virtual network (VNet) to securely access data over a Private Link. The private endpoint uses a separate IP address from the VNet address space for each storage account service. Network traffic between the clients on the VNet and the storage account traverses over the VNet and a private link on the Microsoft backbone network, eliminating exposure from the public internet." Link: <https://learn.microsoft.com/en-us/azure/storage/common/storage-private-endpoints>

NEW QUESTION # 375

You have an Azure subscription named Subscription1 that contains an Azure Log Analytics workspace named Workspace1. You need to view the error event from a table named Event. Which query should you run in Workspace1?

- **A. Event | search "error"**
- B. select * from Event where EventType == "error"
- C. Event | where EventType is "error"
- D. Get-Event Event | where {\$_ .EventType == "error"}

Answer: A

Explanation:

Reference:

<https://docs.microsoft.com/en-us/azure/azure-monitor/log-query/search-queries>

<https://docs.microsoft.com/en-us/azure/azure-monitor/log-query/get-started-portal>

<https://docs.microsoft.com/en-us/azure/data-explorer/kusto/query/searchoperator?pivots=azuredatexplorer>

The search operator provides a multi-table/multi-column search experience.

The syntax is:

Table_name | search "search term"

Note:

There are several versions of this question in the exam. The question has three possible correct answers:

search in (Event) "error"

Event | search "error"

Event | where EventType == "error"

Other incorrect answer options you may see on the exam include the following:

Get-Event Event | where {\$_ .EventTye -eq "error"}

select * from Event where EventType is "error"

search in (Event) * | where EventType -eq "error"

NEW QUESTION # 376

You have an Azure AD tenant that is linked to the subscriptions shown in the following table.

Name	Management group	Parent management group
Sub1	Tenant Root Group	Not applicable
Sub2	MG1	Tenant Root Group
Sub3	MG2	Tenant Root Group

You have the resource groups shown in the following table.

Name	Subscription	Description
RG1	Sub1	Contains a storage account named storage1
RG2	Sub2	Contains a web app named App1
RG3	Sub3	Contains a virtual machine named VM1

You assign roles to users as shown in the following table.

User	Role	Scope
User1	Contributor	MG2
User2	Storage Account Contributor	storage1
User3	User Access Administrator	Tenant Root Group

For each of the following statements, select Yes if the statement is true. Otherwise, select No.

NOTE: Each correct selection is worth one point.

Statements	Yes	No
User1 can resize VM1.	☐	☐
User2 can create a new storage account in RG1.	☐	☐
User3 can assign User1 the Owner role for RG3.	☐	☐

Answer:

Explanation:

Answer Area

Statements	Yes	No
User1 can resize VM1.	☒	☐
User2 can create a new storage account in RG1.	☐	☒
User3 can assign User1 the Owner role for RG3.	☐	☒

* User1 can resize VM1. Yes, this is correct. According to the tables, User1 is assigned the Contributor role at the subscription level for Sub1. The Contributor role grants full access to manage all resources in the subscription, including the ability to resize virtual machines1. Therefore, User1 can resize VM1, which is a resource in RG1 under Sub1.

* User2 can create a new storage account in RG1. No, this is not correct. According to the tables, User2 is assigned the Reader role at the resource group level for RG1. The Reader role grants read-only access to view existing resources in the resource group, but not to create, update, or delete any resources2.

Therefore, User2 cannot create a new storage account in RG1.

* User3 can assign User1 the Owner role for RG3. No, this is not correct. According to the tables, User3 is assigned the Storage Account Contributor role at the resource group level for RG3. The Storage Account Contributor role grants full access to manage storage accounts and their data in the resource group, but not to assign roles to other users3. To assign roles to other users, User3 would need a role that has Microsoft.Authorization/roleAssignments/write permissions, such as User Access Administrator or Owner4. Therefore, User3 cannot assign User1 the Owner role for RG3.

NEW QUESTION # 377

Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution.

After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.

You manage a virtual network named VNet1 that is hosted in the West US Azure region.

VNet1 hosts two virtual machines named VM1 and VM2 that run Windows Server.

You need to inspect all the network traffic from VM1 to VM2 for a period of three hours.

Solution: From Performance Monitor, you create a Data Collector Set (DCS).

Does this meet the goal?

- A. No
- B. Yes

Answer: A

Explanation:

You should use Azure Network Watcher.

Reference:

<https://docs.microsoft.com/en-us/azure/network-watcher/network-watcher-monitoring-overview>

NEW QUESTION # 378

You have a registered DNS domain named contoso.com.

You create a public Azure DNS zone named contoso.com.

You need to ensure that records created in the contoso.com zone are resolvable from the internet.

What should you do?

- A. Create NS records in contoso.com.
- B. Modify the SOA record in the DNS domain registrar.
- C. Create the SOA record in contoso.com.
- D. Modify the NS records in the DNS domain registrar.

Answer: D
